SUMMARY

Knowledgeable Software Developer with 4 years of experience working with cross-functional teams, delivering projects on time while ensuring high-quality benchmarks.

- Effectively manages workloads and meets challenging deadlines.
- Strong understanding of **web technologies, programming languages, and frameworks**.
- Proficient in **backend application development** using **J2SE/J2EE, Spring MVC, Spring JDBC Template, Spring Boot, and Spring Batch**.
- Expert in **React.js** and **Next.js**, with strong command over **JavaScript, TypeScript, HTML5, and CSS3**.
- Proficient in developing reusable components and implementing modern UI/UX design principles.
- Deep understanding of **state management** using **Redux, Context API**, and similar libraries.
- Skilled in collaborating with backend teams using **Node.js, Django**, and **Java** to integrate RESTful APIs
- Hands-on experience with **TypeScript, React, LESS, and Knockout**.
- Designed and maintained robust ETL and ELT pipelines, adhering to data quality and governance best practices.
- Utilized **Java 8 Method References** to point to methods by their names and leverage functional interfaces.
- Developed **Cloud-Compatible Microservices** using **Spring Boot, Java, and related web technologies**.
- Implemented **Spring Boot** to efficiently build **cloud-based Microservices** with minimal configuration.
- Deployed projects on **AWS EC2 instances**, and created **snapshots for data storage in AWS S3**.
- Configured **Docker Containers** and created **Docker files** for different environments.
- Designed and developed **responsive web pages** using **HTML, XHTML, CSS, JSTL, JSF/PrimeFaces, AJAX, JavaScript, AngularJS, Bootstrap, Node.js, and jQuery**.
- **Cron jobs in UNIX** automate repetitive tasks like backups, log rotation, and system health checks.

TECHNICAL SKILLS

Programming Languages:

Java 8+, J2EE, JavaScript, React, TypeScript, C++, C#, Python, SQL, NoSQL

Web & Frameworks:

Spring Boot, Spring MVC, Hibernate, RESTful APIs, Microservices, JSP, JSF, Node.js, React.js, AngularJS, AJAX, JQuery

Cloud & DevOps:

AWS (EC2, S3, Lambda, API Gateway), Azure, Docker, Kubernetes, Jenkins, CI/CD

Databases:

Oracle, PostgreSQL, MySQL, SQL Server

Tools & Technologies:

Git, Maven, JIRA, Postman, Apache Tomcat, WebLogic, Eclipse, IntelliJ, Firebug

Testing & Security:

JUnit, Selenium, JWT, OAuth2, OWASP Security

PROFESSIONAL EXPERIENCE

Sr. Software Engineer

State of Georgia | November 2023 – Present

- Engaged in all phases of the **Software Development Life Cycle (SDLC)**, including **problem-solving, analysis, design, coding, unit testing, and acceptance testing**.
- Utilized **Agile methodology**, actively participating in **Daily Scrum meetings** to ensure project alignment and rapid iterations.
- Designed and developed **user-friendly GUIs** using **HTML5, JSP, JavaScript, AngularJS, AJAX, and CSS**.
- Leveraged **Bootstrap** to structure database interactions, enhancing interface usability and separation of concerns.
- Developed and maintained cross-platform mobile applications using **React Native** for both iOS and Android, ensuring responsive UI and seamless performance.
- Implemented **modern mobile UI/UX design principles**, maintaining consistency with platform-specific design guidelines (Material Design for Android, Human Interface Guidelines for iOS).
- Integrated **RESTful APIs** with mobile applications to enable real-time data syncing and backend communication, improving app responsiveness by 30%.
- Collaborated with backend teams to design efficient API contracts, handled **asynchronous data flows** using Redux and Axios.
- Integrated third-party APIs and payment gateways, working with both **Node.js** and **Java-based** backends.
- Developed **use cases using UML**, ensuring clear documentation of system interactions and workflows.

Full Stack Developer

US Bank | October 2021 – October 2023

- Participated in all phases of the **Software Development Life Cycle (SDLC)**, including **problem-solving, analysis, design, coding, unit testing, and acceptance testing**.
- Designed and developed **RESTful APIs** for multiple project modules based on business requirements.
- Strong experience in **building microservices** using the **Spring Cloud stack**.
- Led the development of responsive, scalable applications using **React.js** and **Next.js**, resulting in a 40% performance boost in initial load time.
- Collaborated closely with backend teams using **Node.js** and **Django** to integrate RESTful APIs, ensuring seamless front-end to back-end communication.
- Designed and implemented **TypeScript-based components** to enforce type safety and improve maintainability across large codebases.
- Utilized **Redux** and Context API for complex state management across multi-layered user interfaces.
- Advocated for best practices in **HTML5/CSS3**, implementing mobile-first, accessible designs and reusable UI components.
- Played a key role in sprint planning and technical documentation, translating business requirements into scalable frontend solutions.
- Mentored junior developers, conducted code reviews, and led knowledge-sharing sessions on React performance optimization.
- Ensured data quality by implementing audit, balance, and control (ABC) checks in ETL flows.
- **Applied MLOps best practices** to manage model lifecycle, versioning, reproducibility, and rollback strategies using ML Metadata and Model Registry.
- **Developed and deployed scalable end-to-end ML pipelines** in cloud environments using Python, Vertex AI, and BigQuery, enabling real-time predictions across multiple use cases.

- Developed **multithreaded applications** using **core Java concepts**, including **multithreading, exception handling, and collections**.
- Maintained and optimized SQL Server stored procedures, views, indexes, and partitions to support high-volume data processing and reporting.
- Designed and implemented **reactive RESTful APIs** using **Spring WebFlux and reactive data streams**.
- Developed interactive **React.js UI components** using **one-way data flow, Virtual DOM, JSX, and state management**.
- Designed and managed Amazon RDS instances for scalable, high-availability relational databases in production environments.
- Experience working with HATS (Host Access Transformation Services) for automating legacy mainframe applications in a modernized UI environment.
- **Implemented Generative AI solutions** to enhance customer service, leveraging LLMs for automated responses and insights.
- Built end-to-end ETL pipelines to extract, transform, and load data from diverse sources into data lakes and warehouses.
- Integrated Terraform with CI/CD pipelines for automated environment provisioning and rollback support.
- Developed and orchestrated complex data workflows using Apache Airflow to ensure timely and reliable data delivery.
- Experience in debugging ETL failures and root-cause analysis of data discrepancies and performance issues.
- Designed scalable, secure GenAI workflows using Bedrock APIs, IAM policies, and real-time inference endpoints.
- Improved **application scalability** by adopting **reactive programming paradigms** within **WebFlux**, replacing traditional blocking architectures.
- Researched and evaluated **LLMs and fine-tuned AI models** for personalized banking experiences and recommendations.

Software Developer

MissionSquare Retirement, DC | *October 2020 – September 2021*

- Developed **Webservice operations** within a **Service-Oriented Architecture (SOA)**.
- Analyzed requirements with the team, wrote **High-Level Design Documents**, created **System Use Cases**, and assessed **risk factors**.
- Created **reusable and testable React.js functional and class components** using **ES6**.
- Developed **Web UI components** using **JavaScript, jQuery, AngularJS, and AJAX**.
- Supported feature development in a React-based SaaS platform, writing modular JavaScript code.
- Worked alongside senior engineers to integrate front-end with Django REST APIs.
- Assisted in building custom UI components, following accessibility and WCAG standards.
- Created **functions and assigned roles in AWS Lambda** for **event-driven processing** using **Python and Java**.
- Led a **Microservices migration strategy** to replace a **monolithic architecture**, enhancing **scalability and flexibility**.
- Experience in **Azure DevOps**, including CI/CD pipelines, monitoring, and infrastructure automation.
- Developed a **Bash script** to **scan logs for critical errors**, triggering alerts via email
- Designed and implemented **PL/SQL queries** for necessary **database operations**.
- Created and maintained test cases in BDD format using the Cucumber framework, enhancing collaboration between technical and non-technical stakeholders.

- Managed **application deployment across multiple environments**, including **Development, QA, Staging, and Production**.

Environment: Java 8, Spring Framework, REST APIs, AWS Lambda, Vue.js, SQL, Microservices.

Education

Master of Science in Computer Science

Sofia University, Palo Alto, CA – *2018*

Master of Science in Electrical Engineering

Northwestern Polytechnic University, Fremont, CA – *2017*

Bachelor of Engineering in Information Technology

GTU, India – *2014*
