Senior Java Full Stack Developer | Cloud-Native Microservices Expert | AWS Certified Engineer

Professional Summary:

- Experienced Senior Java Full Stack Developer with 8+ years of building scalable, secure enterprise applications using modern Java frameworks, microservices, and DevOps best practices across diverse industries.
- Strong backend development experience using Java, Spring Boot, Spring Security, JPA, Hibernate, and Microservices.
- Proficient in creating and consuming RESTful and GraphQL APIs integrated with Angular and React frontends.
- Extensive experience in microservices architecture using Docker, Kubernetes, Helm, and container orchestration platforms like AWS ECS, EKS, and Azure AKS.
- Built serverless APIs using AWS Lambda, API Gateway, and DynamoDB, with Python, Docker, CI/CD, and Terraform.
- Skilled in database integration using Oracle, PostgreSQL, MySQL, SQL Server, MongoDB, Cassandra, and DynamoDB for relational and NoSQL solutions.
- Strong knowledge in authentication and authorization using OAuth2, JWT, Spring Security, and API Gateway.
- Proven hands-on experience in setting-up CI/CD pipelines with Jenkins, GitHub Actions, GitLab CI, Azure DevOps, and integration of automated testing.
- Strong hands-on experience in Spring Boot microservices, REST APIs, CI/CD, OAuth2 / JWT, Kafka, Docker/Kubernetes and cloud platforms like AWS and Azure.
- Experience in developing scalable, fault-tolerant cloud-native applications in AWS and Azure environments.
- Expertise in AWS services including Lambda, EC2, RDS, S3, API Gateway, CloudWatch, CloudFormation, IAM, SQS, SNS, Step Functions, and KMS.
- Solid understanding of synchronous messaging patterns using RabbitMQ, Apache Kafka, and AWS EventBridge for event-driven architecture.
- Developed front-end using Angular (upto v15), Angular Material, RxJS, Bootstrap, HTML5, CSS3, SCSS, and JavaScript.
- Worked with ReactJS, Redux, Context API, React Hooks, and created reusable UI components for modern SPAs.
- Developed solutions in React and Python, containerized with Docker, deployed to AWS via Terraform and CI/CD.
- Employed logging, tracing, and monitoring using tools like ELK Stack, Prometheus, Grafana, AWS CloudWatch, Azure Monitor, and Datadog.
- Managed secure infrastructure provisioning using Terraform, AWS CloudFormation, and Azure Resource Manager.
- Applied test automation using JUnit, Mockito, Jasmine, Karma, Selenium, Cypress, Postman, and Rest Assured.
- Integrated React UIs with AWS API Gateway and Lambda functions, using Terraform for infra and CI/CD for deployment.
- Regularly presented architecture/design proposals to cross-functional teams; collaborated across backend, frontend, and DevOps teams with clear, concise communication.
- Implemented DevSecOps pipelines and ensured code quality using SonarQube, ESLint, Checkstyle, PMD, and integrated code scanning with Snyk.
- Continuously upskilling in modern technologies including serverless architecture, container security, ML workflows, and observability platforms.

Education & Certification Details:

- Bachelor's in Computer Science University College of Engineering Osmania University – India.
- AWS Certified Developer – Associate – [Link](#)
- AWS Certified Solutions Architect – Associate – [Link](#)

Technical Tools:

Languages: Java, JavaScript, TypeScript, SQL, PL/SQL, Python, Bash, YAML

Backend: Java8–17, Spring Boot, Spring MVC, Spring Security, JPA, Hibernate, REST APIs, GraphQL, Microservices, JSP, Servlets, Node.js, WebFlux, Vert.x, Quarkus

Frontend: Angular8–15, React, Redux, Context API, Hooks, HTML5, CSS3, SCSS, Bootstrap, JavaScript, TypeScript, jQuery, AJAX, Material UI, Ant Design.

Database: Oracle, PostgreSQL, MySQL, SQL Server, MongoDB, Cassandra, Redis, Cosmos DB, DynamoDB.

Sr. AWS Certified Java Developer

Cloud & DevOps: AWS (EC2, ECS, EKS, Lambda, S3, RDS, DynamoDB, SQS, SNS, Step Functions, CloudWatch, API Gateway, CloudFormation, IAM), Azure (Functions, AKS, Cosmos DB, Blob Storage, Azure DevOps), GCP (BigQuery, Pub/Sub, Cloud Functions), Docker, Kubernetes, Helm, Terraform, GitHub Actions, GitLab CI/CD, Jenkins, ArgoCD

Tools: Git, GitHub, Bitbucket, Maven, Gradle, JIRA, Confluence, Postman, Swagger, OpenAPI, SonarQube, SonarLint, Log4j2, Prometheus, Grafana, ELK, Datadog, Sentry.

Messaging & Streaming: Kafka, RabbitMQ, JMS, ActiveMQ, AWS EventBridge, Kinesis.

Testing: JUnit, Mockito, TestNG, Jasmine, Karma, Cypress, Selenium, RestAssured, Postman, Cucumber, Pact.

PROFESSIONAL EXPERIENCE

Sr. Java AWS Full Stack Developer | QVC | West Chester, PA | Apr 2023–Present

Responsibilities

- Delivered highly available solutions on AWS by integrating React with Python microservices deployed in Docker containers and deployment managed via Terraform and CI/CD pipelines.
- Designed scalable and maintainable Java Spring Boot-based microservices with REST and GraphQL for API delivery.
- Built REST APIs using AWS Lambda, Python, and API Gateway, deployed via CI/CD pipelines.
- Integrated messaging services using Apache Kafka for real-time processing and RabbitMQ for reliable asynchronous communication.
- Built Angular15-based frontends with Angular CLI, Angular Material, RxJS, and custom services to interact with backend REST/GraphQL APIs.
- Deployed microservices on AWS ECS with Fargate using Terraform scripts and managed orchestration via AWS Application Load Balancer.
- Created automated CI/CD pipelines with GitHub Actions and Jenkins for build, test, and deployment workflows.
- Containerized React and Python apps using Docker, deployed on AWS via CI/CD pipelines and managed through Terraform.
- Built dynamic UI components and single-page applications using React.js, integrated seamlessly with Next.js routing and data fetching methods.
- Integrated AWS DynamoDB as the primary NoSQL datastore for scalable, serverless backend services in Java-based microservices architecture.
- Designed and implemented over 20 RESTful APIs, incorporating OAuth2, JWT, and API Key-based authentication schemes for secure communication between services.
- Implemented CRUD operations on DynamoDB using AWS SDK for Java and Spring Boot with proper exception handling and retries.
- Secured APIs with Spring Security, JWT, and OAuth2, and performed threat modeling and API hardening.
- Developed serverless AWS Lambda functions and Step Functions integrated with DynamoDB and SQS.
- Delivered serverless components using AWS Lambda, integrated with S3 and DynamoDB, deployed through CI/CD and Terraform.
- Used DynamoDB Streams to trigger AWS Lambda functions for real-time data processing and event-driven workflows.
- Optimized database access using JPA Criteria queries, query caching, and integration with PostgreSQL and DynamoDB.
- Leveraged AWS Bedrock in serverless work flows using AWS Lambda for scalable pipelines.
- Developed Unit, Integration, and contract tests using JUnit5, Mockito, Spock, and Spring Test.
- Used OpenAPI3.0 and Swagger annotations to generate interactive documentation for microservices.
- Integrated React UIs with AWS API Gateway and Lambda functions, using Terraform for infra and CI/CD for deployment.

Environment: Java 17, Spring, Spring Boot, Microservices, Kafka, RabbitMQ, Angular 15, React, GraphQL, PostgreSQL, MongoDB, DynamoDB, AWS ECS/EKS, Lambda, API Gateway, Terraform, Docker, Kubernetes, Jenkins, GitHub Actions, Prometheus, Grafana, Swagger, Postman, JIRA, SonarQube, Cypress, Selenium, OpenAPI.

Sr. Java AWS Full Stack Developer | CVS | Irving, TX | Jun2022–Mar2023

Responsibilities:

- Engineered full-stack applications using React for the front-end and Python for back-end APIs hosted on AWS, leveraging Docker containers and Terraform to manage infrastructure in automated CI/CD pipelines.
- Developed scalable microservices in Java 11 using Spring Boot and integrated REST APIs for data exchange.
- Built Angular12 applications with Material Design and Bootstrap for responsive UI design.
- Created monitoring dashboards for AWS Bedrock API calls using CloudWatch to track usage and performance metrics.

Sr. AWS Certified Java Developer

- Containerized React and Python apps using Docker, deployed on AWS via CI/CD pipelines and managed through Terraform.
- Integrated DynamoDB with REST APIs to enable low-latency data access in full stack applications built with Java, Spring Boot and ReactJS.
- Built serverless APIs using AWS Lambda, API Gateway, and DynamoDB, with Python, Docker, CI/CD, and Terraform.
- Monitored production apps with AWS CloudWatch, running on EC2, built in Python/React, containerized with Docker, and deployed via CI/CD.
- Implemented asynchronous processing pipelines using Kafka and RabbitMQ for high-throughput systems.
- Collaborated with business analysts and eligibility policy experts to translate complex rules into system logic within the EDBC module, ensuring accurate benefit determination.
- Used Next.js API routes alongside React.js front-end logic to build full-stack JavaScript applications.
- Tuned DynamoDB throughput using on-demand/provisioned modes and optimized for cost and performance.
- Developed GraphQL APIs and resolver logic using Spring GraphQL integrated with Apollo Client.
- Used MongoDB and Oracle as hybrid storage, implementing data validation, indexing, and aggregation.
- Managed containerized microservices using ECS Fargate, deployed with CI/CD and monitored with CloudWatch.
- Deployed applications using GitLab CI/CD pipelines integrated with Docker and Helmcharts for Kubernetes.
- Setup monitoring dashboards in Grafana and alerts in Prometheus for performance and error tracking.
- Used Azure DevOps for backlog management, deployments, and infrastructure provisioning.
- Built event-driven workflows using AWS Lambda, S3 triggers, and Python for backend logic.
- Wrote unit tests using JUnit, Mockito, and BDD scenarios using Cucumber.
- Enabled detailed application observability using ELK stack and integrated APM agents.

Environment: Java11, Spring Boot, GraphQL, Kafka, RabbitMQ, MongoDB, Oracle, Angular12, Azure, AzureAD, GitLab, Kubernetes, Helm, Docker, Redis, JUnit, Cucumber, ELK, Prometheus, Grafana, Postman, JIRA.

Sr. Java Developer | Goldman Sachs | Salt Lake City, UT | Jul2019 – May2022

Responsibilities

- Developed Java 8-based enterprise services with Spring Boot, Hibernate, and JPA for product management workflows.
- Maintained legacy JSP and Servlet-based web modules and gradually migrated them to Spring Boot microservices.
- Developed Angular 10 components using reactive programming and managed state with NgRx.
- Integrated React front-end with AWS Cognito for auth and API Gateway for data access via Lambda.
- Deployed services on AWS using Terraform and managed CI/CD with Jenkins.
- Integrated with AWS services like RDS, DynamoDB, and S3 for data storage and file handling.
- Deployed Python services with Docker on ECS, Integrated logs and alarms via CloudWatch.
- Utilized Kafka and RabbitMQ for event streaming and reliable background job execution.
- Automated infrastructure for AWS EC2, RDS, and S3 with Terraform and integrated Docker builds.
- Performed extensive testing using JUnit, Mockito, Postman, and Selenium.
- Created secure API layers with AWS API Gateway, using Terraform and deploying Dockerized apps.
- Designed UI apps in React that fetch data from DynamoDB via API Gateway and Lambda functions.
- Maintained dashboards using AWS CloudWatch, created custom metrics and alert rules.
- Secured endpoints using JWT tokens and Spring Security filters.
- Optimized data access with indexing, normalization, and query optimization strategies.

Environment: Java8, Spring Boot, Angular10, Kafka, RabbitMQ, AWS RDS, S3, DynamoDB, Jenkins, Postman, JIRA, Elasticsearch, Kibana, JUnit, Mockito.

Sr. Java Backend Developer | Synchrony Financial | Hyderabad, India | Jun2017–March2019

Responsibilities:

- Developed backend services for a large scale platform using Java8, Spring Boot, and Microservices architecture.
- Designed and implemented REST APIs for catalog, pricing, and order management used by millions of customers.
- Integrated Apache Kafka to enable real-time communication between services and external systems.
- Used Spring Data JPA and Hibernate to interact with MySQL and PostgreSQL databases with advanced query optimization.
- Built reusable front-end modules using Angular6 and Bootstrap, aligned with micro frontend principles.
- Integrated Redis for caching product and user session data, reducing DB load and improving latency.

Sr. AWS Certified Java Developer

- Employed Docker to containerize services and deployed to Kubernetes clusters using Helmcharts.
- Created Jenkins pipelines for CI/CD and integrated SonarQube for static code analysis and coverage tracking.
- Used ELK stack and Grafana dashboards to monitor system health and application logs across environments.
- Implemented OAuth2-based authentication and authorization with Spring Security and JWT tokens.
- Worked in Agile teams, participated in daily stand-ups, sprint planning, code reviews, and demo sessions.
- Conducted unit and integration testing with JUnit, Mockito, and Spring Test framework.

Environment: Java8, SpringBoot, Angular6, Microservices, Kafka, Redis, MySQL, PostgreSQL, Docker, Kubernetes, Jenkins, Helm, SonarQube, Swagger, ELK, JIRA, Git, OAuth2, JWT, JUnit, Mockito.

Java Developer | Zoho | Hyderabad, India | Nov 2016 – May 2017

Responsibilities:

- Developed and maintained Java-based enterprise applications for telecom client, working on order-processing and validation modules.
- Designed and implemented REST APIs using Spring MVC and Spring Boot, consumed by mobile and web clients.
- Used Hibernate ORM for persistence layer and wrote complex HQL and JPQL queries for data operations.
- Designed responsive web interfaces using JSP, JavaScript, jQuery, and Bootstrap for real-time order tracking.
- Integrated with external SOAP and REST services to validate order status and manage transaction workflows.
- Used Oracle Database and PL/SQL stored procedures for transactional and reporting data access.
- Built Jenkins CI pipelines for code integration, automated unit testing, and WAR packaging.
- Implemented log monitoring with Log4j and setup dashboards with ELK stack for application metrics.
- Applied JUnit and Mockito for backend testing and Postman for REST service validation.
- Participated in daily Agile Scrum meetings, sprint planning, and technical reviews with the onsite team.

Environment: Java 8, Spring Boot, Spring MVC, Hibernate, JSP, Bootstrap, Oracle, PL/SQL, Jenkins, Git, SOAP/REST APIs, JIRA, Postman, ELK, JUnit, Log4j.
