

Rahul Patnala

Java/Full Stack Developer

520 Sorrento Dr, Centerton, AR, 72719, Centerton, United States, 72719, +14699272202,
rahulpatnala007@gmail.com

Professional summary

Java/Full Stack Developer with 5+ years of experience in enhancing transaction speed and reliability through innovative microservices and cloud-native architectures. Proficient in Docker, Kubernetes, and REST, with a strong focus on optimizing system performance and scalability. Demonstrates expertise in integrating third-party services and leading API standardization, committed to driving technological advancements and maintaining code integrity across diverse platforms.

Skills

Java, Spring, React, Node.js, REST, Microservices, Kubernetes, Docker, AWS, MongoDB, Oracle, JavaScript, HTML5, CSS3, Kafka, Maven, Git, Jenkins, JUnit, Agile, SQL, Spring Boot, Version Control, API Testing, Performance Tuning, Angular, Mockito, Gradle, JPA, Spring JDBC, Selenium.

Employment history

Java/Full Stack Developer, Jan 2024 - Present

Walmart, Bentonville, AR

- Develop Java microservices for POS, enhancing transaction speed and reliability
- Implement Kubernetes for app deployment, boosting resource efficiency
- Configure Splunk for data analysis, improving system monitoring
- Manage Git repositories, ensuring code integrity and collaboration
- Utilize MariaDB and Cosmos DB for data integration, supporting web services
- Modernize legacy POS components with distributed caching solutions, reducing service latency and improving transaction reliability
- Lead API standardization initiatives across teams, implementing versioning strategies and comprehensive documentation practices
- Develop automated testing frameworks for microservices, ensuring code quality and maintaining system stability during rapid deployments
- Design and optimize cloud-native microservices architecture, integrating distributed caching and real-time monitoring to enhance service reliability
- Spearhead database migration initiatives between MariaDB and Cosmos DB, ensuring seamless data flow and minimal service disruption
- Drive cross-team API standardization efforts, implementing robust versioning protocols and streamlining development workflows
- Orchestrate database migration strategies between MariaDB and Cosmos DB, ensuring continuous data availability and optimal system performance
- Design comprehensive API testing frameworks, implementing automated validation protocols to maintain service reliability during deployments
- Implement robust monitoring solutions using Splunk and Kubernetes, optimizing resource allocation and system performance metrics

Java/Full Stack Developer, Sep 2022 - Dec 2023

Kohls, Austin, TX

- Enhance e-commerce backend, boosting user satisfaction with scalable solutions.
- Integrate third-party services, improving payment and inventory management efficiency.
- Develop React.js components, optimizing app performance and user experience.
- Led migration from monolithic to microservices architecture, strengthening system scalability and maintaining continuous service availability
- Established robust error handling and monitoring protocols across distributed systems, minimizing downtime and enhancing error detection
- Implemented microservices architecture and RESTful APIs, enhancing system resilience while maintaining service uptime through distributed computing patterns
- Engineered high-performance React components and Java backend services, delivering robust solutions for e-commerce platform scalability
- Spearheaded adoption of modern development practices, integrating CI/CD pipelines and automated testing to strengthen code reliability

Java Developer, Jun 2018 - Jul 2021

Royal Bank of Canada, Capgemini, Bangalore, India

- Automated tests with Selenium improved application reliability and deployment efficiency.
- Integrated Jenkins and Maven for seamless deployment, enhancing workflow efficiency.
- Developed JUnit test cases for REST services, boosting system robustness and error handling.
- Conducted SQL data validation, ensuring database accuracy and integrity.
- Collaborated on test strategies, aligning with business needs and quality standards.
- Architected modular test automation solutions integrating multiple technologies, driving significant improvements in deployment speed and reliability
- Implemented microservices architecture using Spring Boot and RESTful APIs, optimizing system performance and reducing service response times
- Spearheaded migration from monolithic to distributed architecture, strengthening application scalability and maintainability
- Designed and deployed cloud-native solutions on AWS, incorporating containerization and establishing robust CI/CD pipelines
- Led cross-functional team initiatives to modernize legacy systems, resulting in enhanced system reliability and reduced maintenance costs
- Orchestrated database optimization strategies, implementing efficient indexing and query tuning to improve application responsiveness

Education

Master's in Computer Science, Dec 2022

University of Central Missouri, Lee's Summit

Bachelor's in Computer Science, May 2018

Vishnu Institute of Technology, Bhimavaram

Certifications

Oracle Certified Java SE8 Programmer, Dec 2018

Oracle

Google Cloud Certified Associate Cloud Engineer, Dec 2023

Google
