

Summary:

Results-driven Java Full Stack Developer with 3 years of experience in designing, developing, and maintaining scalable web applications. Proficient in Java technologies (Java SE/EE, Spring Boot), front-end frameworks (React.js, Angular), and database management (MySQL, MongoDB). Adept at building RESTful APIs, implementing microservices, and ensuring code quality through testing and continuous integration. Demonstrated ability to collaborate effectively with cross-functional teams and deliver high-quality software solutions in agile environments. Committed to continuous learning and applying industry best practices to enhance application performance and user experience. Developed and maintained dynamic, responsive web applications using Angular, integrating RESTful APIs to create seamless user experiences and optimize application performance. Utilized Angular modules, components, and services to create reusable, scalable, and maintainable front-end code, improving development efficiency and code reusability. Implemented state management and routing with Angular, enhancing application navigation, and ensuring smooth transitions and dynamic content loading across multiple views.

Skills:

- **Programming Skills:** Proficient in Java, Python, Angular and SQL.
- **Cloud Computing:** Experienced with AWS (EC2, S3, Lambda, CloudFormation), Microsoft Azure, and Google Cloud Platform.
- **Data Engineering:** Skilled in designing and managing ETL processes and data pipelines. Proficient with Amazon Redshift, AWS Glue, and Amazon EMR.
- **Team Leadership:** Demonstrated ability to lead and motivate teams to achieve project goals.
- **Problem Solving:** Excellent at identifying challenges and developing effective solutions.
- **Communication:** Strong verbal and written communication skills, adept at facilitating collaboration and understanding across diverse groups.

Education:

Master of Science in Information Systems

University of Colorado Denver. May 2024

CGPA – 3.43

Bachelors of Business Administration (BBA)

Sai Sudhir Degree College (Osmania University). May 2020

CGPA – 7.8

Experience:

Arrant Tech.

July 2024 - Current

Role: Software Engineer Backend

- Optimize the performance of existing Java-based applications by identifying bottlenecks and implementing best practices in coding, database queries, and caching mechanisms.
- Implement security measures in both front-end and back-end components, including encryption, authentication, and authorization protocols.
- Utilize advanced Java features such as multithreading, concurrency, and asynchronous programming to enhance application performance and responsiveness.
- Apply design patterns like Singleton, Factory, Observer, and Dependency Injection to create robust and maintainable code structures.
- Leverage the full capabilities of the Spring Framework, including Spring Security, Spring Data JPA, and Spring Batch, to build secure, data-driven, and batch-processing applications.
- Manage and automate the CI/CD pipeline to ensure seamless deployment of applications and services. Maintain comprehensive technical documentation for all developed features and systems, ensuring that knowledge is easily accessible to other team members.
- Collaborate with business analysts, product managers, and other stakeholders to gather requirements and translate them into technical specifications.
- Efficiently troubleshoot, debug, and resolve production issues to ensure smooth operation of applications.
- Integrate applications with cloud services and platforms, ensuring scalability, availability, and security.

Teleperformance

Role: Java Backend Developer – Hyderabad, India

July 2020 – May 2022

- Java Technologies: Java SE/EE, Spring Boot, Spring MVC, Hibernate/JPA.
- Front-End Development: HTML5, CSS3, JavaScript, React.js, Angular, or Vue.js.
- Back-End Development: RESTful APIs, Microservices architecture, SOAP Web Services.
- Database Management: SQL, MySQL, PostgreSQL, MongoDB, Oracle.
- Version Control Systems: Git, GitHub, GitLab.
- Full-Stack Development: Design and implement web applications using Java for the back-end and modern front-end technologies.
- API Development: Develop and maintain RESTful APIs and microservices to support application functionality.
- Database Design: Design, develop, and optimize database schemas and queries for efficient data management.
- Code Quality: Write clean, maintainable code and conduct code reviews to ensure high-quality deliverables.
- Testing: Create and execute unit, integration, and end-to-end tests to verify application functionality and reliability.

RESPONSIBILITIES:

- Full-Stack Development: Design and implement web applications using Java for the back-end and modern front-end technologies.
- API Development: Develop and maintain RESTful APIs and microservices to support application functionality.
- Database Design: Design, develop, and optimize database schemas and queries for efficient data management.
- Code Quality: Write clean, maintainable code and conduct code reviews to ensure high-quality deliverables.
- Testing: Create and execute unit, integration, and end-to-end tests to verify application functionality and reliability.

Certifications:

- Spring Professional Certification
- Angular Developer Certification
- **AWS Cloud Practitioner** – Validated expertise in cloud computing and AWS services. (ID: 447393318)
