Email: rahulgangasani@gmail.com

LinkedIn: [Rahul Gangasani](#)

Mobile: +1 3169259269

Place: United States

Technical Skills

- **Programming Languages:** C#, Python, C, VBScript, ASP.NET MVC, .NET Framework, .NET Core, Web API, WPF
- **Data Analysis Libraries:** NumPy, Pandas
- **Database Management:** SQL, MySQL, PostgreSQL, Cosmos DB
- **Web Technologies/Client Scripting:** HTML, CSS, JavaScript, WEB API, RESTful API, Angular
- **Data Visualization:** SPSS, Tableau, Power BI
- **Technologies:** ASP.Net MVC, ASP.Net Core, Microservices, ADO.Net, Web Forms, Windows Forms, Entity Framework, SQL, Azure, WCF, jQuery, JavaScript, SSIS, SSRS, Angular, React, CI/CD Azure Pipelines.
- **Office software:** Microsoft Word, Excel, Power Point, MS Access
- **Machine Learning:** Regression Models, Random Forest, Support Vector Machines (SVM), Convolutional Neural Networks (CNN), Recurrent Neural Networks (RNN), k-Nearest Neighbors (KNN)
- **Testing Tools:** Playwright, Nunit
- **Development Tools:** Visual Studio, Visual Studio Code, Postman

Professional Experience

A-1 Packaging Solutions Inc Full Stack .NET Developer

Nov 2024 – Present
Detroit, Michigan

- Developed and maintained C# WPF and ASP.NET desktop applications, integrating them seamlessly with an Angular as UI web application for enhanced control and functionality.
- Designed and implemented scalable solutions using Azure DevOps, including CI/CD pipelines for automated builds and deployments.
- Worked extensively with Azure App Services to deploy and manage web applications in a cloud environment.
- Proficient in designing and optimizing complex databases in SQL Server, ensuring high performance and reliability.
- Experience in full-stack .NET development, including front-end design with Angular and back-end services using ASP.NET Core and Web APIs.
- Created and configured Virtual Machines (VMs) in Azure, ensuring proper resource allocation and security for application hosting.
- Conducted successful server migration projects, involving moving legacy systems to modern environments with minimal downtime and data integrity assurance.
- Implemented logging, exception handling, and performance monitoring across applications using tools like Application Insights and Log Analytics.
- Contributed to the modernization of legacy systems by refactoring code, optimizing performance, and adopting best practices for maintainable and secure development.

Pinacle IT Software Developer

Jan 2024 – Nov 2024
Dallas, Texas

- Analyzing the business requirements and proposed C# and ASP.Net based front end and SQL based backend solutions.
- Interacting with the system users to identify and gather data required for processing.
- Designing and developing various abstract classes, interfaces, classes using object-oriented principles to construct the business logic using C#.
- Utilized SQL DB tools to extract data and to create program status/tracking reports
- Used remote connectivity software for remote troubleshooting, performance enhancements and upgrades.

- Utilize the latest advancements in Microsoft ASP.NET Core to build and manage the REST API for exposing the tax data to external applications from other teams.
- I worked with Interactive SQL server with a relational DB.
- Assisted implementation personnel and third- party software vendors with troubleshooting.
- Analyzed C#, ASP.NET Codes and Migrated to Azure app services.

Cognizant Technology Solutions
Programmer Analyst

May 2020 – July 2022
Client– PG&E, California

Description: Project focused on supporting PG&E applications development, leveraging Cognizant's expertise. During this time, I provided production support as a .NET developer, ensuring the stability and functionality of critical applications. This involved troubleshooting, bug fixing, and implementing enhancements to maintain seamless operations.

- Designing and developing various abstract classes, interfaces, classes using object-oriented principles to construct the business logic using C#, ASP.NET MVC.
- Designed and developed dynamic web applications using ASP.NET MVC, focusing on robust architecture and scalable solutions.
- Integrated ASP.NET MVC applications with various databases using Entity Framework, enabling efficient data access and management.
- Developed RESTful APIs using ASP.NET Core for communication between microservices and external clients, ensuring interoperability and scalability.
- Utilized SQL Server, MYSQL DB tools to extract data and to create program status/tracking reports.
- Used remote connectivity software for remote troubleshooting, performance enhancements and upgrades.
- Created the Web API application with Angular, React JS along with Cosmos DB dependency Injection and Deployed into the Azure with CI/CD pipelines.
- Experienced in the full Software Development Lifecycle (SDLC) using Agile Scrum methodologies and CI/CD pipelines for automation and deployment.
- Developed custom SSIS components and scripts to address specific data processing requirements and optimize performance.
- Utilized SSIS packages to automate and streamline ETL (Extract, Transform, Load) processes, improving efficiency and accuracy in data handling while monthly DB upload process.
- Utilized API management platform Azure API Management to publish, monitor, and secure .NET Core APIs for external consumption.
- Implemented API gateways and service meshes to manage traffic, security, and communication between .NET Core microservices.
- Worked with Interactive SQL server with a relational DB and visualized the data using Power BI.
- Assisted implementation personnel and third- party software vendors with troubleshooting.
- Analyzed C#, ASP.NET Codes and Migrated to Azure app services.
- Created Front End application for automation of tasks in the project using HTML, CSS, JavaScript, and .NET Framework.
- Monitored and optimized TFS workflows and processes to enhance team productivity and project delivery.

Nisum India Pvt Ltd
Junior Software Engineer

May 2019 – February 2020

- Participated in C# training sessions, gaining proficiency in the language's syntax, object-oriented principles, and development practices.
- Took part in coding exercises and projects to apply C#, SQL, HTML, CSS, and JavaScript concepts in real-world scenarios.
- Utilized C# for backend development, including building APIs and handling server-side logic.
- Applied SQL queries for data manipulation and analysis in relational databases.
- Contributed to database design and optimization to enhance performance.
- Troubleshot and resolved database-related issues within a collaborative team environment.
- Implemented client-side validation and UI enhancements for dynamic functionality.

- Collaborated with backend developers to consume APIs and display data dynamically.

Relevant Projects

- **Hospital Management using ASP. NET MVC**
 - **Description:** This project is to streamline and automate various processes involved in hospital administration, including patient management, appointment scheduling, billing, and inventory management.
 - **Technologies:** Microsoft SQL server, HTML, CSS and ASP.NET
- **Airport Management using ASP. NET MVC**
 - **Description:** Airport Management is an interface which facilitates a Passenger, Pilot and Crew of airport to register and create mutual communication between these given roles.
 - **Technologies:** Microsoft SQL server, HTML, CSS and ASP.NET
- **Heart Disease Prediction using Python Machine Learning**
 - **Description:** A Python machine learning project that aims to predict heart disease by analyzing various medical factors and creating a predictive model to assist in early diagnosis and treatment.
 - **Technologies:** Python, Jupyter Notebook, KNN Algorithm, Decision Tree, Random Forest, Scatter Plot and Mat plots.
- **Automation of Apple Crop Disease Prediction**
 - **Description:** A Python-based project focused on automating the prediction of apple crop diseases by analyzing relevant data and employing ML techniques to aid in early detection and prevention of diseases, hence improving yield quality.
 - **Technologies:** Python, Jupyter Notebook, SVM, Random Forest and XG boost.
- **HR Analytics Dashboard using Power BI**
 - **Description:** HR analytics dashboard created using Power BI provides visual insights and data-driven analysis on various HR metrics, such as employee turnover, Attrition Rate, Employee Metrics in various Departments, and workforce demographics, enabling informed decision-making in HR management.
 - **Technologies:** PowerBI

Education

Masters in computer and information sciences
Wichita State University

August 2022 – December 2023

Bachelor of Engineering in Electronics and Communication
SIR CR Reddy College of Engineering, Andhra University

June 2016 - April 2020
