SUMMARY

Full-stack developer with 3+ years of experience designing and delivering interactive, user-focused web platforms and modular backend systems. Adept at developing business-critical applications across domains such as financial services, enterprise operations, and workflow automation. Strong foundation in software engineering with a master's and Bachelor's in Computer Science, consistently driving efficiency, reliability, and growth through streamlined system design and process optimization.

TECHNICAL SKILLS

Backend Development: C#, .NET Core, ASP.NET Core Web API, Node.js

Frontend Development: Angular, React, TypeScript, JavaScript, Bootstrap

Data & Testing: MS SQL Server, Redis, MSTest, Moq, Postman, Insomnia, Pytest

DevOps, Cloud & Tooling: Git, Azure DevOps, Docker, AWS, CI/CD pipelines, JIRA.

WORK EXPERIENCE

Software Engineer | Rocket Mortgage

May 2025 – Present | Detroit, MI

- Collaborated on a mortgage broker portal (Rocket Pro) APIs for calculating pricing and fees during loan creation, ensuring accurate results.
- Enhanced pricing accuracy by minimizing API payloads and dynamically configuring loan parameters for efficient fees and rate retrieval.
- Migrated pricing logic to different endpoint using event-based communication & domain-driven development, reducing response time by 35%.
- Integrated Sierra AI into broker portal to automate partner issue form submission and trigger tickets and resolve broker inquiries.
- Streamlined support workflow by with AI-driven ticket creation, reducing resolution time for partner-related loan issues by up to 40%.

Full Stack Developer | Antra, Inc

Jan 2024 – May 2025 | Remote, US

- Built a responsive HR management platform as SPA, streamlining access to employee services and increasing user engagement by 20%.
- Developed real-time, interactive UI components to support complex task like leave approvals and payroll updates with conditional rendering.
- Architected service modules for employee records, benefits, and payroll processing, applying domain principles to ensure scalability & clarity.
- Implemented comprehensive audit logging and role-based access controls to ensure data security, compliance, and traceability within operations
- Established automated testing frameworks and CI/CD pipelines, cutting system downtime by 30% while maintain release stability.

Software Engineer | JP Morgan (Forage)

May 2023 – July 2023 | Remote, US

- Built a real-time stock options web app focused on market visibility and tracking, using dynamic components to streamline data exploration.
- Developed a backend service to process stock trade data with optimized request handling and ensuring low-latency updates for active sessions.
- Simulated live market behavior by triggering demo stock price updates and rendering interactive graphs, enabling real-time data visualization for user testing and engagement.

Full Stack Developer | Azinova Technologies

April 2024 – Aug 2025 | Dubai, UAE

- Develop a cleaning service appointment management system with real-time updates to handle scheduling and customer interactions efficiently.
- Built dynamic, validation-driven booking forms with contextual input restrictions to reduce errors and prevent invalid appointment submissions.
- Architected backend services with event-based communication reliable processing and scalability across appointment and customer modules.
- Integrated automated notifications for confirmations and cancellations, improving customer communication and reducing missed appointments.

Web Developer | Katalyst Incorporation, LLC

Feb 2020 – Feb 2021 | Dubai, UAE

- Developed and maintained a wholesale food and retail distributor website with a responsive, modern UI to improve user engagement.
- Implemented automated invoice generation with tax calculation, itemized summaries, reducing manual effort and ensuring billing accuracy.
- Improved search visibility by implementing on-page SEO through optimized meta tags, alt attributes, and structured schema markup.
- Worked closely with design and backend teams to align UI behavior with business logic, ensuring seamless data flow and smooth user journey.

PROJECTS

Neurodiversity-Adaptive Learning Content Generator

2025

- Designed and implementing a LangChain-powered adaptive content generator that profiles neurodiverse students (ADHD, dyslexia, autism) via quick assessments and dynamically delivers synchronized visual, audio, and kinesthetic lesson modules.

OpenSkyWatch: Free, Real-Time Space Data Hub

2025

- an open-source, zero-cost event-driven platform using Apache Kafka and Kafka Streams to ingest NASA, NOAA, and MPC data, enriching orbits via SGP4 and auto-emitting real-time space-weather and NEO alerts, all visualized through a React dashboard on free hosting tiers.

EDUCATION

Master of Science in Computer and Information Science

University of Michigan

Aug 2022 – Apr 2024

Dearborn, MI, USA

Bachelor of Technology in Computer Science & Engineering

Manipal Academy of Higher Education

Sep 2017 – Jun 2021

Dubai, UAE
