EDUCATION

University of South Florida, Tampa, Florida

May 2025

Master of Science in Computer Science

Vellore Institute of Technology, Tamil Nadu, India

May 2023

Bachelor of Technology in Computer Science

TECHNICAL SKILL

- **Languages:** Kotlin, Java, C, C++, Python, JavaScript, HTML, CSS, Bash, Shell scripting
- **Libraries & Framework:** Android SDK, Jetpack Compose, Retrofit, Coroutine, Spring Boot, Junit, XML, MVC, MVVM, MVP, Dagger Hilt, Glide, Navigation Component, LiveData, Paging Library
- **Development Tools:** Android Studio, AWS, Git, GitHub, Docker, Postman, VS Code, Jira, Slack, Gradle, CI/CD
- **Databased:** SQLite, Firebase, MongoDB, Room Database
- **Operating System:** Windows, Linux, MacOS, Android

WORK EXPERIENCE

Android Developer, TechXcess Solution, Surat, India

Apr 2022 - May 2023

- Collaborated with multidisciplinary teams to design, implement, and test an Android application and enhanced **app performance** by **cutting crash rates** by **40%** through optimized **Kotlin** coding practices and provided thorough documentation to **streamline future debugging** and maintenance efforts.
- Spearheaded **UI/UX** design discussions, implementing **user-centric design enhancements** that led to a **60% increase in user engagement**. Additionally, conducted comprehensive unit testing, debugging, and code reviews, improving **application performance and stability** by **25%** while ensuring a seamless user experience.
- Seamlessly integrated **RESTful APIs** and adjusted **JSON** data handling using **Retrofit** and **OkHttp**, leading to a **30% reduction** in network request latency and significantly faster data loading speeds, ensuring a smoother and **more efficient user experience**.
- Designed **highly responsive**, visually engaging user interfaces by adhering to **Material Design principles**, resulting in **20% increase in user engagement** and **15% reduction** in bounce rates by enhancing intuitive navigation and aesthetic appeal.
- Exhibited strong **Agile development** expertise by actively participating in daily stand-ups, sprint planning, and retrospectives, fostering collaboration and **efficient workflow management**. Consistently met project deadlines without **compromising quality**, delivering **well-optimized** and **high-performance applications**.
- Utilized Android **Jetpack components** (ViewModel, LiveData, Navigation, Room) and third-party libraries to build scalable applications, reducing **app crashes** by **25%** and enhancing **performance on 95%** of Android devices.

PROJECTS

SAMVAD – Accessible Chat Application

- Streamlined a chat application for **visually impaired** users using **MVVM** architecture, improving modularity and **reduce code complexity**, resulting in a **40% faster development** and debugging process while ensuring seamless scalability.
- Developed advanced accessibility key features, including speech-to-text, text-to-speech, emergency calling, gesture-based navigation, and a voice-guided app interaction, **increasing user engagement by 50%** and **usability for 90%** of target users.
- Enforced **advanced security measures** by integrating fingerprint authentication and **AES encryption**, ensuring **100% data confidentiality** while complying with standard **privacy regulations**, effectively protecting user credentials and sensitive data.
- Integrated **Firebase** for real-time **location tracking**, enabling instant emergency alerts and faster response coordination, reducing first responder dispatch times by **15%** and **improving emergency response** efficiency for an entire city-wide user base.
- Refined **notification systems** and improved real-time updates by leveraging **Java** and **XML** to design an intuitive and responsive **UI/UX**, resulting in a **35% increase in user retention** and maximized overall engagement.
- Tech Stack: Kotlin, MVVM, Coroutines, Retrofit, Firebase, Room, Biometric, API

Smart Door Locking System (IoT Project)

- Assembled an **IoT** (Internet of Things) driven smart door locking system incorporating **RFID** based authentication and **passcode verification**, enhancing **access control by 60%** and minimizing security vulnerabilities.
- Applied **AWS Cloud integration** to maintain **real-time entry logs**, enabling remote access worldwide enabling introducing automated **security protocols** that reduced unauthorized login attempts by **35%**.
- Leveraged **Arduino-based** sensor technology for instant identity validation, improving system **accuracy by 50%** and optimizing the overall **authentication process** for seamless user interaction.
- Tech Stack: Embedded C, AWS IoT SDK, BLE, Arduino, WebSocket

TimeSnap – Historical Visualiztion App

- Crafted an Android application integrating NASA World **Wind SDK** with **AR features** and implemented custom rendering pipeline for historical map overlays using **OpenGL**.
- Engineered an offline-first architecture utilizing the **Room database**, ensuring seamless **cloud synchronization** and enhancing app reliability in **low-connectivity environments**.
- Improved **Snapchat Creative Kit** to enable **AR-powered features**, achieving a **90% success rate** in real-time effects rendering and elevating user engagement with immersive experiences.
- Tech Stack: Kotlin, C++, MVVM, Room, Firebase, OpenGL, Snapchat SDK
