

PROFESSIONAL SUMMARY

- **Over 5+ years of experience** in .NET ecosystem development, specializing in building **microservices**, **RESTful APIs**, and enterprise-grade web applications using **C#**, **ASP.NET Core**, and **Entity Framework Core**.
- Expertise in **cloud-native development** and deployment using **Microsoft Azure**, including **Azure App Services**, **Azure SQL**, **Cosmos DB**, **Azure Monitor**, **Application Insights**, and **Azure DevOps CI/CD pipelines**.
- Proficient in developing **distributed microservices architectures**, incorporating **Autofac** for dependency injection, **SignalR** for real-time communication, and **JWT/OAuth2.0** for secure authentication.
- Designed and implemented **event-driven systems** with **SignalR** and **Kafka integration**, enabling real-time dashboards and notifications in high-availability environments for healthcare and finance domains.
- Built high-performance **data access layers** using **Entity Framework Core (2.2)** and **LINQ**, with deep experience in optimizing SQL queries, leveraging **AsNoTracking()**, compiled queries in **Azure SQL** and **MS SQL Server**.
- Strong background in **security and compliance**, developing HIPAA-compliant systems, implementing **RBAC**, **token-based authentication**, centralized logging, and API auditing via **custom ASP.NET Core middleware**.
- Integrated **observability tooling** using **Azure Monitor**, **Log Analytics (KQL)**, and **Application Insights**, enhancing incident resolution and system diagnostics with traceable telemetry and correlation IDs.
- Delivered robust CI/CD pipelines using **Azure DevOps (YAML)** with gated releases, test automation, code analysis, and rollback strategies to enforce quality and reduce manual overhead in releases.
- Developed complex, reactive **frontend modules** using **Angular (v6+)**, **RxJS**, and **RESTful integration**, enhancing user interactivity for real-time monitoring tools and financial visualization dashboards.
- Experience across **healthcare**, **financial services**, and **enterprise SaaS** domains, including behavioral healthcare platforms, credit scoring analytics, and multi-tenant digital infrastructure systems.
- Achieved high unit test coverage using **xUnit.net**, **NUnit**, **MSTest**, and mocking libraries like **Moq** and **Microsoft Fakes**, integrating tests into CI pipelines for regression-proof deployments.
- Designed **NoSQL data models** on **Azure Cosmos DB**, applying partitioning and TTL strategies for scalability and cost-efficiency in telemetry and clinical record storage.
- Migrated monolithic modules to API-driven endpoints using **repository pattern** and **dependency inversion**, effectively reducing technical debt and enabling a plug-and-play feature extension model.
- Skilled in maintaining **OpenAPI (Swagger)** specifications to support API discoverability, generate Angular service proxies, and enable consumer-driven contract testing across teams.
- Provided architectural leadership in **monolith-to-microservices** migrations, using domain-driven design, service boundaries, and asynchronous messaging to decouple systems for scalability and maintainability.
- Effective team collaborator and mentor, conducting code reviews using **Azure Repos**, enforcing **SOLID** principles, and coaching junior developers in **async programming**, **DI patterns**, and secure cloud-native development best practices.

TECHNICAL SKILLS:

1. **Languages:** C#, JavaScript, TypeScript, SQL, LINQ
2. **Frameworks & Libraries:** ASP.NET Core, ASP.NET MVC, Entity Framework Core, Entity Framework 5, Razor Pages, Autofac, SignalR, RxJS
3. **Frontend Technologies:** Angular (6+), HTML5, CSS3
4. **API & Integration:** RESTful APIs, Web API, OpenAPI (Swagger), OAuth 2.0, JWT, SignalR, Kafka, HMAC Authentication
5. **Testing & Quality:** xUnit.net, NUnit, MSTest, Microsoft Fakes, Moq, FxCop, StyleCop
6. **Databases:** Azure SQL Database, MS SQL Server (2012+), Azure Cosmos DB, Stored Procedures, Views, Indexing, Partitioning, NoSQL
7. **Cloud & DevOps:** Azure App Services, Azure DevOps, Azure Repos, Azure Monitor, Application Insights, YAML Pipelines, CI/CD, Git, Deployment Slots, Auto-scaling
8. **Architecture & Design Patterns:** Microservices, Clean Architecture, Controller-Service-Repository Pattern, Dependency Injection (DI), Repository Pattern, Event-Driven Architecture, Domain-Driven Design (DDD)
9. **Monitoring & Logging:** Azure Monitor, Log Analytics, KQL, Application Insights, Centralized Logging, Exception Handling Middleware, Request Tracing
10. **Tools & Platforms:** Visual Studio (2013, 2017), Azure DevOps, Git, IIS 8.0, Swagger, Microsoft Windows Server
11. **Security & Compliance:** Token-based Authentication, RBAC, ASP.NET Core Identity, HIPAA Compliance, Audit Trails, Role-based Access Control
12. **Agile & Collaboration:** Scrum, Sprint Planning, Story Estimation, Code Reviews, Stakeholder Coordination

PROFESSIONAL EXPERIENCE

Client: Mindoula | Silver Spring, MD

Nov 2024 – Present

Role: .NET Developer

- Built **distributed microservices using ASP.NET Core and C# (4.5)**, enabling modular development of patient risk assessment tools that supported rapid deployment of mental health intervention workflows.
- Integrated **Entity Framework Core (2.2) with Azure SQL and Cosmos DB**, optimizing data access layers for critical clinical modules by introducing batching, indexing, and asynchronous repository patterns.
- Developed **RESTful APIs using ASP.NET Core Web API** to expose standardized patient interaction endpoints, allowing third-party EHR systems to synchronize real-time patient vitals and encounter data.
- Configured **scalable deployments using Azure App Services**, implementing auto-scaling rules, deployment slots, and managed identities to improve operational resilience and reduce manual intervention during rollouts.
- Designed and executed **automated unit tests using xUnit.net**, with integration into CI pipelines on Azure DevOps to enforce non-regression and ensure critical health features remain stable across versions.
- Applied **Autofac for dependency injection**, reducing service coupling across asynchronous message handlers, background workers, and domain services, which simplified testing and deployment in containerized environments.
- Built **interactive dashboards using Angular with RxJS and REST integration**, enabling care managers to track patient progress, appointment compliance, and escalation alerts in real time.
- Engineered **event-driven modules with SignalR**, delivering live updates for clinician dashboards when care plans, session notes, or emergency alerts were modified—enhancing response times in urgent scenarios.
- Designed and optimized **NoSQL collections in Azure Cosmos DB** with partitioning strategies based on provider IDs and timestamp-based TTL policies to balance high availability with long-term cost control.
- Integrated **Azure Monitor and Application Insights** to track backend performance bottlenecks, exception traces, and API usage analytics—resulting in improvement in incident response time.
- Led the **development of custom middleware in ASP.NET Core**, implementing centralized exception handling, request tracing, and API usage logging, aligned with HIPAA auditing requirements.
- Employed **Azure DevOps pipelines** for end-to-end CI/CD automation across dev, test, and staging environments—reducing manual deployment time and increasing sprint throughput.
- Managed **Git-based workflows in Azure Repos**, enforcing pull request validations, branch protection rules, and review policies that improved team-wide code quality and accountability.
- Created **ETL routines in C# to sync clinical data** between **Azure SQL and Cosmos DB**, ensuring consistency between transactional records and analytics dashboards used by care coordinators.
- Authored and maintained **OpenAPI (Swagger) specifications** for internal and external APIs, supporting consistent documentation, auto-generated Angular service proxies, and consumer testing automation.
- Provided **architectural guidance during data model redesigns**, ensuring compatibility with existing analytics tools and facilitating migration from monolithic patterns to event-driven service boundaries.
- Implemented **RBAC and token-based authentication using ASP.NET Core Identity**, improving security for admin features while supporting role escalation workflows for case managers.
- Collaborated with **clinical and compliance teams** to ensure that system features—including secure messaging and audit trails—met privacy mandates under HIPAA and mental health care regulations.
- Mentored **junior developers on advanced .NET topics** such as DI patterns, async/await concurrency issues, and secure cloud-native development practices, accelerating team ramp-up and delivery.

Environment: .NET Core, C# (4.5), ASP.NET Core, Entity Framework Core (2.2), Angular, SignalR, Azure App Services, Azure Cosmos DB, Azure SQL Database, xUnit.net, Autofac, Azure DevOps, Azure Monitor, Git, Azure Repos, OpenAPI/Swagger, Visual Studio 2017

Client: Experian | Costa Mesa, CA

Jan 2024 – Nov 2024

Role: .NET Web Developer

- Refactored legacy .NET Framework modules into **modular RESTful services using ASP.NET Core 2.2**, introducing clean controller-service-repository architecture and reducing response times under high concurrency.
- Developed high-performance **data access layers using Entity Framework Core 2.2** with query-level optimization, implementing compiled queries and `AsNoTracking()` for read-heavy operations to minimize SQL Server CPU spikes.
- Designed and deployed **Azure App Services** with deployment slots and autoscaling based on telemetry from **Application Insights**, supporting multi-tenant applications uptime and reducing operational incidents.
- Implemented **CI/CD pipelines in Azure DevOps**, integrating static code analysis, branch policies, and gated releases using YAML pipelines, cutting regression risks during deployments and supporting blue-green release strategies.
- Architected a **JWT-based authentication system** using **ASP.NET Core Identity** and middleware pipelines to enforce granular access policies across APIs, aligning with Experian's internal compliance mandates.

- Engineered real-time notification dashboards via **SignalR** hubs for loan monitoring products, enabling instant credit alerts to end users by pushing WebSocket messages triggered from Kafka consumers.
- Constructed dynamic and reactive UI components in **Angular 6**, integrating RxJS streams with **ASP.NET Core Web APIs** to power real-time financial trend visualization for concurrent users.
- Managed cloud-hosted relational data models in **Azure SQL Database**, implementing stored procedures, views, and computed columns to encapsulate complex credit scoring logic with auditable performance traces.
- Applied **unit testing using NUnit** with Moq to validate controller and service-layer behavior under various input conditions; achieved code coverage in core service modules through automated pipeline-triggered test runs.
- Centralized monitoring via **Azure Monitor and Log Analytics**, creating custom KQL queries to track memory utilization, request latencies, and dependency failures, enabling faster RCA and preventative tuning.
- Performed structured **code reviews via Azure Repos (Git)**, enforcing SOLID principles, dependency injection patterns via **Autofac**, and consistent exception handling across services through middleware-based policies.
- Supported Agile development through participation in story-point estimation, sprint demos, and architectural spike sessions, ensuring that technical backlog items aligned with customer SLAs and enterprise architecture goals.

Environment: .NET Core 2.2, ASP.NET Core MVC, C#, Entity Framework Core 2.2, Angular 6, Azure SQL Database, Azure App Services, SignalR, Azure DevOps (Pipelines, Repos), NUnit, Git, JWT, Autofac, Application Insights, KQL, RESTful APIs

Client: Newton Software Pvt Ltd | India

Oct 2019 to Aug 2023

Role: Web API Developer

- Developed **modular, service-oriented web APIs** using **ASP.NET MVC 4** and **C# 5.0**, adhering to REST architectural principles and implementing attribute routing, controller action filters, and content negotiation to support varied client platforms and authentication mechanisms.
- Engineered data access layers using **Entity Framework 5 (Code First)** with **LINQ-to-Entities**, optimizing transactional efficiency via lazy/eager loading strategies, explicit joins, and custom SQL mappings for complex reporting modules.
- Designed normalized and indexed schemas on **MS SQL Server 2012**, applying partitioned tables, stored procedures, and optimized views to handle bulk data ingestion and reporting with sub-second latency under load.
- Implemented tightly bound **Razor View Pages** with conditional logic, model binding, and partial views for rendering dynamic UI components that reflected real-time backend API states without compromising maintainability.
- Configured and tuned **Microsoft IIS 8.0** application pools, virtual directories, and SSL bindings to achieve consistent web hosting performance, while analyzing worker process memory dumps for runtime exceptions and memory leaks.
- Orchestrated automated **unit and integration tests** using **MSTest** and **Microsoft Fakes** for mocking database contexts and simulating external API calls, reaching high test coverage thresholds required for deployment approvals.
- Integrated **Autofac IoC container** to abstract service lifetimes, inject cross-cutting concerns like logging and caching, and maintain open/closed principle in architecture, easing downstream implementation changes.
- Built secured REST endpoints by implementing **token-based authentication with OAuth 2.0** and HMAC signing, applying **custom authorization attributes** to control role-level access across endpoints.
- Integrated CI/CD via **Azure DevOps**, configuring build pipelines (.NET build tasks, NuGet restore, MSBuild) and release gates (approval flows, rollback strategies), improving deployment agility and version traceability.
- Applied diagnostics using **Application Insights** and **IIS logs** to trace runtime bottlenecks and proactively resolve issues using correlation IDs and telemetry-driven debugging.
- Created structured, maintainable project documentation (Swagger/OpenAPI specs, architecture diagrams, class libraries) to support future enhancements, code reviews, and third-party integrations.
- Conducted code reviews and performance audits across the team using static analysis tools (FxCop, StyleCop), mentoring junior developers in SOLID principles and design pattern usage across the project lifecycle.
- Coordinated with stakeholders and QA teams to execute cross-browser and cross-platform functional validation cycles, ensuring client delivery quality on enterprise-grade portals.

Environment: C# 5.0, ASP.NET MVC 4, Razor Pages, RESTful Web APIs, Entity Framework 5 (Code First), LINQ-to-Entities, MS SQL Server 2012, Stored Procedures, Microsoft IIS 8.0, MSTest, Microsoft Fakes, Autofac, OAuth 2.0, Azure DevOps, Application Insights, Visual Studio 2013, Windows Server 2012

EDUCATION

Bachelor of Technology (B.Tech) in Electrical and Electronics Engineering

- Jawaharlal Nehru Technological University Hyderabad (JNTUH), India
