

# Rajesh Lakavath

Technology: Java

Email: [lakavath0126@gmail.com] Phone: [3312949911] LinkedIn: [<https://www.linkedin.com/in/rajeshlakavath-150aa135a>]

## PROFESSIONAL SUMMARY

- Full-stack Java Developer with 6+ years of experience designing and deploying scalable enterprise applications using Java, Spring Boot, REST APIs, and microservices architecture.
- Proven expertise in containerization (Docker, Kubernetes), cloud platforms (AWS, GCP), and CI/CD pipelines (Jenkins, GitHub Actions) to streamline deployments and ensure reliability.
- Skilled in backend data operations with Hibernate, JPA, and complex SQL across PostgreSQL, MySQL, Oracle, along with hands-on NoSQL experience (MongoDB, Cassandra, Redis).
- Strong advocate of clean code, Agile/Scrum methodologies, test-driven development, and performance optimization using observability tools like ELK, Prometheus, and Grafana.

## TECHNICAL SKILLS

- Programming Languages: Java (SE 17+), Spring Framework, Spring Boot, RESTful API Design, Microservices Architecture
- Frameworks/Tools: Spring, Hibernate, Maven, Gradle, JUnit, Selenium, Apache Tomcat, Eclipse, IntelliJ IDEA
- Databases: SQL, MySQL, PostgreSQL, Oracle, MongoDB, Cassandra, Couchbase, Redis
- Web Technologies: HTML, CSS, JavaScript, jQuery, JSON, XML
- Version Control: Git, SVN, GitHub, GitLab
- Cloud Platforms: AWS, Google Cloud, Azure
- Other Tools: Docker, Jenkins, Kubernetes, SonarQube
- Agile Methodologies: Scrum, Kanban
- OOP & Patterns: Strong understanding of Object-Oriented Programming and Design Patterns
- Testing: Unit testing, Integration testing, End-to-End testing
- SDLC: Full lifecycle development understanding
- Algorithms/Data Structures: Applied knowledge in development

## PROFESSIONAL EXPERIENCE

**Client: TDBank  
Mount Laurel, NJ.**

Senior Java Developer

June 2024 – Present

- Developed resilient microservices using Java 17, Spring Boot, and Spring Cloud for secure, scalable banking transactions and API gateways.
- Built secure authentication and SSO flows using Spring Security, OAuth2, and JWT to protect financial APIs and centralize identity management.
- Created distributed REST APIs with Spring MVC, Swagger, and Postman to integrate customer data with external financial systems.

- Deployed containerized services on AWS EKS using Docker and Kubernetes to enhance reliability and automate deployments.
- Managed complex data operations with Spring Data JPA, Hibernate, and PostgreSQL, optimizing query performance and transaction integrity.
- Applied Java Streams, Lambdas, and Optional to write clean, efficient business logic and reduce code redundancy.
- Automated CI/CD using Jenkins, GitHub Actions, and SonarQube, ensuring code quality and continuous delivery.
- Processed large datasets using Spring Batch and Quartz Scheduler for reports, logs, and transaction history.
- Implemented service-to-service security via HTTPS, TLS, and Spring Cloud Gateway to enforce encryption and rate-limiting.
- Improved system performance using Redis, EHC ache, and Spring Cache to minimize database load.
- Performed integration and unit testing with JUnit 5, Mockito, and Test Containers, reaching over 90% test coverage.
- Managed database versioning and zero-downtime schema changes with Liquibase for reliable production updates.
- Participated in Agile collaboration and mentored junior developers on clean coding, SOLID principles, and Spring Boot best practices.

**Client: Banner Health**

**Role: Java Developer**

**Dec 2020 – July 2023**

- Developed patient-centric modules using Java 11, Spring Boot, and REST APIs to securely access health records and manage appointments.
- Migrated monolithic applications into microservices using Spring Cloud Config and Eureka, enhancing scalability and fault isolation.
- Ensured HIPAA compliance by implementing secure access via Spring Security, JWT, and LDAP integration. • Integrated insurance APIs using Feign Clients and OAuth2 for real-time eligibility checks and claim validations.
- Built real-time workflows using Kafka, Spring Cloud Stream, and Listeners for patient notifications and lab updates.
- Managed complex entity relationships using JPA, Hibernate, and Cascade Types for doctors, patients, and appointments.
- Tuned SQL queries in PostgreSQL and Oracle to optimize performance for patient data retrieval and transactions.
- Developed interactive UI integration with REST APIs, JavaScript, and jQuery to enhance patient-facing functionality.
- Containerized services with Docker and deployed via Kubernetes on Azure AKS to support scalability and failover.
- Designed automated test suites with JUnit, Mockito, and Selenium achieving over 85% code coverage.
- Scheduled recurring jobs for billing and report generation using Spring Batch and Quartz Scheduler.
- Used Redis caching for frequently accessed data like doctor schedules to reduce latency.
- Applied Factory, Builder, and Strategy patterns to ensure modular, reusable, and maintainable code. • Enabled CI/CD pipelines with SonarQube, PMD, and Check style for static analysis and continuous integration.
- Released production builds biweekly using Git, Jenkins, and Blue-Green deployments with zero downtime.

**Client: eBay**

**Hyderabad,Telangana,India.**

- Developed high-performance e-commerce APIs using Java 8, Spring MVC, and Hibernate, handling millions of users and real-time transactions.
- Built secure authentication and authorization features using Spring Security, OAuth2, and session management for both customers and admins.
- Created RESTful services for cart and checkout using Spring Boot, Swagger, and Postman, enabling seamless order processing.
- Enhanced search and filtering features using Java Streams, Lambdas, and Elasticsearch for responsive user experience.
- Managed complex SQL logic with MySQL stored procedures and views for order history and payment data reconciliation.
- Integrated external payment gateway APIs with encryption (AES/RSA) to support secure financial transactions.
- Used Redis caching to improve catalog performance and reduce latency during traffic surges like Black Friday.
- Ensured code quality and deployment reliability through Jenkins, Maven, Selenium, and CI/CD automation. • Developed and tested concurrent-safe modules using synchronized blocks, Executors, and concurrent collections.
- Created custom error handlers using Spring AOP for standardized exception messaging across APIs. • Monitored production systems using ELK Stack, Log4j, and alerting scripts to identify and resolve performance issues.
- Refactored legacy modules from Java 7 to Java 8 to adopt modern features like Streams and Optional.
- Contributed to Agile teams via sprint planning, code reviews, Bitbucket PRs, and load testing with JMeter.

---

## EDUCATION

Master's in computer/information technology services administration and management **Avila University, Kansas City, Missouri**
