Summary

- Results-driven **Full Stack Developer** with 4+ years of professional experience designing, developing, and deploying scalable, cloud-native, and enterprise-grade applications across healthcare, retail, and financial domains.
- Proficient in front-end and back-end technologies, including **Java, Spring Boot, React.js, Angular, and Microservices**, and experienced in leveraging **cloud platforms (AWS, VMware Tanzu)** and **containerization tools (Docker, Kubernetes)** to deliver high-performance solutions. Adept at implementing CI/CD pipelines and driving Agile processes to enhance team productivity and project delivery.
- **Key Achievements:**
 - Led the migration of a legacy enterprise application to **AWS Cloud**, improving scalability and reducing downtime by 40% at Dell Technologies.
 - Developed a **smart inventory management system** that improved operational efficiency by 30% by implementing **role-based access controls** and optimizing SQL queries at Capgemini.
 - Delivered a **customer engagement portal** for Capgemini, increasing feedback response rates by 20% with responsive design and AJAX-based interactions.
 - Contributed to the development of a **cloud-native healthcare records platform** at VMware, leveraging **Docker** and **VMware Tanzu**, ensuring fault-tolerant deployment and seamless user experience.
 - Streamlined deployment workflows by automating CI/CD pipelines using **Jenkins**, reducing deployment time by 25%.
 - Collaborated with global teams to design and implement **microservices architectures**, achieving over 95% code coverage with **JUnit** and **Mockito** for stable production environments.

Skillset

Front-end Technologies: HTML5, CSS3, JavaScript, React.js, Angular (5 and above), TypeScript, Bootstrap, XML, jQuery, AJAX, Redux, GraphQL, Material-UI, Chart.js

Database Technologies: MySQL, MongoDB, PostgreSQL, SQL Server, Oracle, Firebase, Cassandra, RDBMS

Back-end Technologies: Java (1.8 and above), Spring Boot, Spring MVC, Struts, Hibernate, Python, Node.js, C/C++, RESTful APIs, Kafka, Maven, Microservices, PyTorch, JSON, Apache Tomcat, Spring Cloud, Spring Data, Spring Batch, OAuth, Role-Based Access Control (RBAC)

Big Data & Streaming Technologies: Apache Kafka, NoSQL

Testing Tools: JUnit, Spring Test, Mockito, Postman, Cypress, Selenium, PowerMock

Tools and Technologies: Git, Visual Studio Code, Docker, Kubernetes, Jenkins, Nginx, Swagger, GitLab, Eclipse, IntelliJ IDEA, JUnit, Mockito, Log4j, Splunk, JIRA, Confluence, Tableau, Gradle, OAuth, VMware Tanzu

Cloud Technologies: AWS (AWS Lambda, S3, RDS, EC2, CloudFront, SNS, SQS, CloudWatch), Microsoft Azure (Virtual Machines, Blob Storage), CI/CD pipelines

Methodologies: Agile, Scrum, TDD, BDD, SDLC

Professional Experience

Full Stack Developer, Dell Technologies

Aug 2024 – present | Remote, US

Spearheaded the migration and modernization of enterprise applications to cloud-native architectures. Played a key role in designing and developing scalable microservices, building CI/CD pipelines, and implementing efficient front-end solutions.

A) Cloud-Enabled Enterprise Application

- Led the migration of a traditional application to a **cloud-first architecture** using **AWS services S3, RDS, and EC2** for storage, database, and compute resources, ensuring high availability and fault tolerance.
- Containerized applications using **Docker**, deployed and managed them in **Kubernetes clusters**, resulting in improved scalability and deployment speed.
- Developed and tested **microservices** for modular and independent functionalities using **Spring Boot** and **Java**, improving maintainability.
- Built real-time **logging and monitoring systems** with **Splunk** and **CloudWatch**, enabling proactive issue identification and resolution.
- Worked on implementing CI/CD pipelines with **Jenkins** to automate deployment workflows, reducing manual effort and deployment time.
- Integrated **GraphQL APIs** for more efficient data querying and reduced over-fetching in front-end applications.

Full Stack Developer, Capgemini

Jul 2020 – Jul 2022 | Hyderabad, India

Developed scalable microservices-based solutions and dynamic user interfaces for various domains, including smart inventory management and customer engagement platforms. Led a small team in implementing best practices in **Agile development** and ensured high-quality deliverables by focusing on performance optimization, database efficiency, and secure system designs.

A) Development of a Distributed Platform

- Designed and implemented **microservices architecture** using **Java 1.8, Spring Boot**, and **RESTful APIs**, enabling modular, scalable, and reusable service components.

- Developed front-end interfaces using **Angular 8**, **HTML5**, **CSS3**, and **JavaScript**, creating responsive, dynamic, and user-friendly web pages.
- Optimized **SQL** queries for database operations, ensuring efficient data retrieval and improving application performance when interacting with **Oracle RDBMS**.
- Built reusable and dynamic components in **Angular**, enabling streamlined development for the team and reducing coding redundancies.
- Led a small team of 4 developers, coordinating sprints and mentoring junior developers on **Agile methodologies** and best practices.
- Integrated **JSON-based communication protocols** for seamless data exchange across microservices, improving system reliability.
- Conducted rigorous testing with **JUnit** and **Mockito**, achieving over 95% code coverage and ensuring production stability.
- Deployed and monitored services on **Docker** containers, ensuring consistency across multiple environments.

B) Smart Retail Inventory Management System

- Developed a scalable **microservices-based backend** using **Java 1.8**, **Spring Boot**, and **Spring Cloud**, enabling seamless synchronization across inventory, sales, and logistics modules.
- Created robust user interfaces with **Angular 8** for real-time inventory tracking, reducing human errors in stock management.
- Designed **SQL queries** to handle complex data aggregation and reporting requirements, streamlining decision-making for stakeholders.
- Implemented **role-based access controls (RBAC)** using **Spring Security**, enhancing data security and compliance with organizational policies.
- Automated deployment pipelines with **Jenkins**, reducing deployment time and ensuring reliable updates to production systems.
- Collaborated with global teams to identify and resolve critical system bottlenecks, improving **application performance** by 30%.
- Documented and maintained system architecture diagrams and technical workflows, ensuring knowledge transfer within the team.

C) Customer Engagement and Feedback Portal

- Developed a real-time **feedback portal** with a **RESTful API backend** using **Spring Boot** and a responsive front-end built on **Angular 8**.
- Integrated **jQuery** plugins for enhanced user interactions, improving feedback submission rates by 20%.
- Utilized **Oracle RDBMS** for secure data storage and optimized database performance with proper indexing strategies.
- Enhanced the application with **AJAX-based calls**, enabling seamless interaction without full-page reloads, improving the user experience.
- Monitored and troubleshooted live applications using **Splunk**, ensuring 99.9% uptime and resolving critical issues proactively.
- Conducted code reviews, ensuring adherence to **best coding practices** and maintaining high-quality deliverables.

Software Engineer, VMware

Jan 2019 – Jun 2020 | Hyderabad, India

Contributed to the development of cloud-native applications, focusing on microservices architecture and containerization for deployment in virtualized environments. Worked collaboratively to create responsive user interfaces and integrate secure backend services for healthcare and e-commerce applications.

A) Healthcare Records System on a Cloud-Native Platform

- Assisted in developing **microservices** using **Java** and **Spring Boot** for a healthcare application deployed on a **virtualized infrastructure**.
- Collaborated with the team to containerize components using **Docker**, preparing the application for deployment on **VMware Tanzu** or similar cloud platforms.
- Developed responsive front-end interfaces with **React JS** to improve the user experience for managing patient records.
- Supported the integration of **RESTful APIs** with cloud storage solutions, ensuring secure and scalable data handling.
- Gained exposure to **virtualized environments** and **VMware vSphere**, ensuring the application was optimized for cloud-native operations.
- Wrote basic **unit tests** using **Mockito**, contributing to the overall code reliability.

B) E-commerce Order Tracking System

- Built reusable front-end components with **Angular** and **HTML/CSS**, improving page load times and user experience.
- Supported back-end development by implementing smaller features in **Spring Boot**, focusing on improving order tracking capabilities.
- Helped in configuring **NoSQL databases (MongoDB)** for storing order history and retrieval optimization.
- Followed **design patterns** and **coding standards** as guided by senior developers to improve the maintainability of the codebase.
- Learned to create basic **unit tests** with **JUnit** and **Mockito**, ensuring features were tested for common scenarios.
- Actively participated in **Agile sprints** by documenting progress and attending daily stand-ups.

Education

Master of Science in Computer Science, California State University

Aug 2023 – May 2024 | Dominguez Hills, US

Bachelor of Technology in Computer Science, Osmania University

Aug 2016 – Jun 2020 | Hyderabad, India
