516-808-7223

**Certified Base
Programmer for SAS®9**

PROFESSIONAL SUMMARY

- Experienced in providing SAS programming support for Phase I, II, and III clinical trials across a variety of therapeutic areas.
- Strong programming knowledge and hands-on experience in data mapping according to CDISC (Clinical Data Interchange Standards Consortium) standards.
- Skilled in creating and validating SDTM domains from raw datasets in compliance with CDISC standards.
- Expertise in creating ADAM (Analysis Data Model) datasets along with corresponding ADAM specifications, and generating summary reports in the form of TLGs (Tables, Listings, and Graphs).
- Experienced in preparing submission documents, including SDTM and ADaM Reviewers Guides (SDRG and ADRG), and Define.XML specifications for FDA submissions.
- Proficient in writing SAS programs to validate Clinical Summary Reports (CSR), including EU/BR reports, RMP (Risk Management Plan), PVP (Pharmacovigilance Plan), and BDR (Blinded Data Review), ensuring compliance with client requirements before submission.
- Perform descriptive statistical analysis as per Statistical Analysis Plan (SAP) and Mock Shell using various SAS procedure and generating outputs in multiple formats.
- Conduct quality control activities including reviewing aCRF (Annotated Case Report Form), SDTM, and ADaM specifications to ensure data integrity and proper documentation. Collaborate with teams using study documents like SAP, CRF, and protocol for verification.
- Coordinate with Clinical, Statistician, and Data Management teams to ensure timely collection, query resolution, and reporting of clinical trial outcomes.
- Create, modify, and maintain reusable SAS macros for common tasks, such as generating checklist in different formats (e.g., Excel, CSV).
- Strong communication, interpersonal, analytical, leadership, and problem-solving abilities.

EDUCATION

- **Pursuing Doctorate in Business Administration and Management with Business Intelligence and Analytics**, Belhaven University, MS, USA.
- **Master of Science in Data Science and Analytics**, New England College, NH, USA
- **Master of Science in Computer information systems and cybersecurity**, New England College, NH, USA
- **Master of Public Health in Epidemiology and Biostatistics**, Monroe

College, NY, USA

- **Master of Technology – Bachelor of Technology (dual degree) in Biotechnology**, Lovely Professional University, India

PROFESSIONAL EXPERIENCE

Pfizer, USA
Senior Statistical Programmer

Aug 2020 – July 2024

Pfizer, USA
Statistical Programmer

June 2019 – July 2020

- Extensive experience working as a statistical programmer across various therapeutic areas, including Oncology, Rheumatoid Arthritis, Ulcerative Colitis, and COVID-19, handling both production and validation tasks.
- Generated TLFs (Tables, Listings, and Figures) from ADaM datasets using SAS, ensuring compliance with CDISC standards.
- Contributed to SDTM submission packages, updating, and reviewing key documents like SDRG (SDTM Reviewers Guide), ADRG (ADaM Reviewers Guide), and Define.XML specifications for regulatory submissions.
- Created tables and appendices on P21 issue summaries, CTC (Common Terminology Criteria), inclusion/exclusion criteria, and screen failure subjects.
- Developed and validated Trial Design datasets (e.g., TI, TA, TE, TV) per protocol requirement. Collaborated with cross-functional teams to ensure accurate data mapping and integration.
- Wrote SAS programs to identify screen failure and rescreened subjects using SDTM and ADaM datasets, ensuring data integrity and compliance with trial requirement.
- Developed and implemented reusable SAS macros for automating checklists and report generation in multiple formats (Excel, CSV), optimizing workflow and reducing manual errors.
- Reviewed project-related documents, including protocol and SDTM specifications, performing SDTM mapping per CDISC guidelines. Expertise in mapping SDTM-complaint variable to SDTM domains for efficient data submission.
- Independently produced and validated ADaM datasets (e.g., ADAE, ADCM, ADMH, ADTTE, ADRP), ensuring compliance with ADaM implementation Guide. Ensured data consistency across SDTM and ADaM domains for submission.
- Validated clinical summary reports (e.g., safety, vital signs, change from baseline) and generated listings related to safety and efficacy for interim analysis, BDR, and CSR, as per the mock shell.
- Managed analysis datasets and raw data, maintaining organized folders for study documents, specifications, and reusable knowledge assets, ensuring compliance with SOPs, and best practices.
- Conducted ad-hoc analysis and responded to manuscript/publication requests, providing additional analysis as needed for ongoing clinical studies and regulatory support.

Rang Technologies, INC., USA
Data Analyst trainee

July 2018 – June 2019

- Created demographic, efficacy, and safety tables using statistical procedure such as PROC FREQ, PROC MEANS, PROC TRANSPOSE, PROC LIFETEST, etc., ensuring accurate summary statistics for clinical trial reports.
- Developed SDTM datasets (e.g., DM, DS, VS, MH, EX) and ADaM datasets (e.g., ADSL, ADAE, ADTTE) in compliance with CDISC standards, ensuring consistency and quality for regulatory submissions.
- Generated summary reports using PROC REPORT and PROC SUMMARY, providing key insights for clinical analysis.
- Applied various statistical methods for data analysis and interpretation, including Survival Analysis, Analysis of Variance (ANOVA), Regression Analysis, and Co-variance, ensuring accurate and meaningful results.
- Imported and exported raw data files in different formats using PROC IMPORT and PROC EXPORT procedure, enabling seamless data integration across systems.
- Conducted data transformation and manipulation using procedure such as PROC TRANSPOSE, PROC FORMAT, and PROC INFORMAT to prepare datasets for analysis and reporting.
- Gained experience in joining multiple datasets using SQL joins and the MERGE statement, streamlining data integration and ensuring consistency across different datasets.

Harlem Hospital, USA
Intern Infection Control Department

Jan 2017 – Apr 2017

Harlem Hospital, USA
Volunteer, Infection Control Department

Mar 2018 – July 2018

- Conducted daily monitoring of various transmission-based precautions (airborne, droplet, contact, etc.) to ensure proper patient isolation across multiple hospital units, including ICU, Surgery, CCU, NICU, and Pediatric ICU.
- Analyzed infection control data using Centers for Disease Control (CDC) guidelines to track and report the number of healthcare-associated infections (HAIs), identifying trends and areas of improvement.
- Audited sterilization reports to ensure compliance with infection control documentation and regulatory standards.
- Participated in hospital rounds under the supervision of infection preventionist, focusing on infection control practice and patient care.
- Monitored and documented staff and visitor compliance with infection control practices to minimize risk and maintain hospital safety standards.
- Performed surveillance using CDC guidelines and monitoring tools, including the CAUTI bundle, under the supervision of the infection preventionist to track healthcare-associated infections.
- Gained experience in calculating the standardized infection Ration (SIR), incidence and prevalence rates.

- Utilized MS Excel, MS access, and PowerPoint for data analysis and visualization to present findings.

Monroe College, USA
Public Health tutor

Sept 2017 – Dec 2017

- Assisted graduate students with writing research projects and reviewed student papers for clarity, structure, and academic integrity.
- Provided ongoing academic support, helping students understand course materials and improve their academic performance.
- Coordinated student appointment with writing specialists and faculty members to ensure effective academic support.
- Tutored students in Microsoft Excel for statistical analysis, Biostatistics, and the Blackboard Learning Management System (LMS), focusing on new students' technical skills development.
- Administered written assessment as assigned, ensuring fair and accurate evaluation of students' progress.

INDEPENDENT STUDIES

- Analytical method development of active pharmaceutical ingredient (API) by High performance liquid chromatography (HPLC) and Gas chromatography (GC).
Ind-Swift Laboratories Limited (Research & Development center)
Punjab, India
- Computational sequence analysis of "Hypothetical Protein" of Homo sapiens with (Accession number- AAG41779.1). Accession number retrieved from the National center for Biotechnology Information (NCBI).
ADI Biosolution
Punjab, India
- In-silico* Structure based Drug Designing for Vascular endothelial growth factor receptor (VEGFR3) also known as Fms-related tyrosine kinase (FLT-4), a therapeutic target for blood cancer.
ADI Biosolution
Punjab, India

TECHNICAL SKILLS

SAS Skills	Base SAS, SAS MACROS, SAS SQL, SAS/GRAPH, SAS ODS. Key Procedures: PROC FREQ, PROC TRANSPOSE, PROC REPORT, PROC TABULATE, PROC UNIVARIATE, PROC MEANS, PROC SUMMARY, DATA_NULL_.
Database	Oracle Clinical, MS ACCESS
Platforms	UNIX, Windows (SAS 9.4, SAS studio, SAS system viewer)
