

PROFESSIONAL SUMMARY

Results-driven and innovative Software Engineer with 7+ years of experience, specializing in Java, Spring Framework, and React. Known for a proactive approach to solving complex technical challenges and performing root cause analysis, with a strong focus on optimizing application reliability through CI/CD pipelines and data-driven strategies. Consistently deploys user-centered applications with advanced security measures to mitigate fraud risks, fostering trust and enhancing user satisfaction. Skilled at aligning project strategies with industry trends and emerging technologies to drive innovation and maintain a competitive edge.

Experienced in Docker and Jenkins to streamline continuous integration and deployment processes, reducing release cycles and accelerating time-to-market. Collaborative team player with a commitment to high standards, effective mentorship, and an eagerness to learn and apply new technologies, ensuring the delivery of high-quality, scalable solutions in fast-paced environments.

PROFESSIONAL EXPERIENCE

UPS, Chicago, IL

Software Engineer – Java Fullstack

June 2024 - Present

- Integrated **Kafka** as a messaging backbone to enable real-time, event-driven data streaming, reducing transaction processing time and ensuring seamless system-wide updates.
- Built a comprehensive **testing framework** for unit, integration, and end-to-end tests, reducing production errors by 25% and enhancing system reliability.
- Collaborated with teams to embed advanced workflows using **AWS Lambda** and **DynamoDB**, supporting scalable solutions and improving backend efficiency.
- Implemented **Spring Boot** microservices with **Spring Data JPA** and **Spring Security** to ensure modularity, seamless data access, and secure authentication protocols.
- Optimized **DynamoDB queries and indexing**, reducing data retrieval times by 30% and improving backend performance.
- Designed and automated **CI/CD pipelines** using **Jenkins** and **Docker**, reducing deployment times and enabling continuous delivery.
- Conducted regular **code reviews** and mentored junior developers to enforce coding standards and promote best practices, fostering team collaboration and quality improvement.

Wayfair, Boston, MA

Java Developer

June 2023 -

May 2024

- Built search microservices with Java 17, Spring Boot, and Elasticsearch, reducing response time by 2 seconds.
- Orchestrated the migration of 80 million records from Cassandra to MongoDB, resulting in a 20% improvement in data retrieval times.
- Deployed caching strategies using AWS CloudFront, React, and Elasticsearch, accelerating search query speeds by 25%.
- Created test data for QA and UAT in an Agile environment, collaborating with product managers to improve development cycle efficiency by 15%.
- Implemented JUnit & Mockito testing, boosting code coverage by 40% & reducing production defects by 30%.
- Integrated Angular-based front-end with backend APIs, creating a seamless user experience for product browsing, shopping cart, and checkout processes, resulting in a 25% increase in user engagement and faster load times.

- Designed and implemented API gateways using Spring Cloud Gateway, enabling seamless communication between microservices and enhancing security with token-based authentication, resulting in more secure and streamlined service interactions.
- Automated deployment and monitoring of microservices with Kubernetes and Prometheus, improving system scalability and reducing downtime by proactively addressing performance bottlenecks.

Amazon India.,

Software Development Engineer

November 2020 – July 2022

- **Designed and implemented the backend for a data quality module** using **Java**, **Spring Boot**, and **Hibernate**, enabling features such as rule creation, scheduling, steward assignment, and anomaly detection while ensuring scalability and performance.
- **Developed RESTful APIs** to support graphical representations of data quality metrics, established accountability for data quality rules, and implemented a real-time **notification system** for efficient communication of rule status and improvements.
- Focused on **customer-driven development**, ensuring backend solutions aligned with evolving market needs by prioritizing feature requests and delivering adaptable, high-quality software solutions.
- **Created reusable backend utilities in Java**, including modules for pagination, search filters, date range processing, and dynamic validation logic, reducing code redundancy and improving maintainability across projects.
- Designed and deployed **event-driven architecture** using **Kafka** to process real-time data streams for anomaly detection, ensuring system responsiveness and reducing detection latency.
- **Built backend integration services** for browser extensions, leveraging **Spring Boot** and **Redis** for caching and optimization, ensuring seamless interaction between the extension and the core platform.
- Enhanced backend performance by **optimizing database queries and indexing**, using **PostgreSQL** and **Hibernate** to improve data retrieval times and support high-traffic scenarios effectively.

Synechron Inc., Hyderabad, IN

Software Developer

Jan 2020 - Oct 2020

- Designed a spend analyzer microservice with Spring Boot and RESTful APIs, processing over 1,000 transactions daily.
- Designed and deployed infrastructure using AWS CloudFormation templates, automating resource provisioning and reducing setup time by 30%, with integrated monitoring via AWS CloudWatch for real-time tracking.
- Collaborated with architects to design AWS RDS integration for reliable data storage and retrieval, optimizing microservices for seamless interaction with the database layer.
- Developed scalable distributed applications for banking with the Spring Framework, enhancing transaction processing by 30%.
- Configured an automated Jenkins CI/CD pipeline for cloud deployment, resulting in a 50% faster deployment process.
- Implemented automation testing with Selenium, RestAssured, & Cucumber, increasing test coverage by 40%
- Gathered requirements and developed technical specifications, cutting project kick-off time by 20% and aligning with business goals.

Sunkissed Traders Pvt Ltd, Mumbai, Maharashtra

Software Engineer

May 2018- Dec 2019

- Built a data processing pipeline in Java utilizing AWS Lambda for real-time data processing and Amazon S3 for scalable data storage, ensuring efficient handling of large datasets.
- Designed RESTful APIs using Spring Boot to serve analytics data, with Amazon RDS integration for reliable data storage, enabling seamless backend-to-dashboard interaction.
- Optimized the data analytics engine by incorporating AWS EMR and Apache Spark, allowing for complex data transformations and faster processing of large datasets.
- Developed interactive dashboards using Java frameworks connected with AWS QuickSight, delivering real-time insights that enhance user engagement and data-driven decision-making.

- Integrated Java applications with a MySQL database using JDBC, validating procurement data records, detecting discrepancies, and ensuring consistency across multiple transactional processes.
- Collaborated with stakeholders and PMs to gather requirements, streamline processes, and meet business goals.

CORE COMPETENCIES

Programming Languages: Java, Python, C#, SQL, JavaScript, TypeScript, Bash

Frameworks & Libraries: Spring, Spring Boot, Spring MVC, Hibernate, React, Node.js, Django

Databases: MySQL, PostgreSQL, MongoDB, DynamoDB, Oracle

CI/CD & DevOps: Jenkins, Docker, Kubernetes, Git, GitLab CI/CD, Terraform, AWS, Azure DevOps

API Development & Testing: RESTful Web Services, APIs, GraphQL, Swagger, Postman, JMeter

Cloud Technologies: AWS, Azure, Google Cloud Platform (GCP)

Testing & Automation: JUnit, TestNG, Selenium, Cucumber, Rest Assured.

Methodologies: Agile, Scrum, Kanban, Waterfall, Test-Driven Development (TDD), BDD.

Software Design & Architecture: Microservices, Monolithic, Service-Oriented Architecture, (SOA), Domain-Driven Design (DDD), Event-Driven Architecture.

Other Relevant Skills: Object-Oriented Programming (OOP), JDBC, Unit Tests, Web Services, Functional Programming, Asynchronous Programming, Parallel Processing, Load Balancing, API Gateway, Event-Driven Programming, Performance Optimization, Memory Management, System Design, Scalability, Fault Tolerance, Distributed Systems, Networking (TCP/IP, HTTP/HTTPS)

EDUCATION

Master of Science in Information Systems - Central Michigan University
