

Rakesh Kuruva

+1 (816) - 647 1714 | Alpharetta, GA | kuruvarakesh6@gmail.com | [linkedin.com/in/rakesh-kuruva](https://www.linkedin.com/in/rakesh-kuruva)

PROFESSIONAL SUMMARY

- Software Engineer with over 4+ years of experience in designing, implementing, and deploying scalable, high-performance applications in Agile environments.
- Expertise in Java and Node.js, strongly focused on developing algorithms, building large-scale infrastructure applications, and implementing microservices architectures.
- Proficient in front-end development using JavaScript, HTML, CSS, and modern frameworks like React and Angular.
- Skilled in working with relational databases (PostgreSQL, Oracle) and writing optimized SQL queries for high-performance systems.
- Hands-on experience in distributed systems design and resolving complex technical issues to drive innovation and enhance system reliability.
- Experienced in deploying enterprise applications on cloud platforms (AWS, Azure), focusing on scalability, fault tolerance, and cost-effectiveness.
- Strong background in developing and automating test cases using tools like JUnit, Selenium, and implementing robust CI/CD pipelines with Jenkins, Docker, and Kubernetes.
- Strong collaboration skills, working closely with Quality Engineering, Product Management, and Technical Operations teams to deliver high-quality software solutions.

EDUCATION

University Of Missouri – Kansas City, MO
Master of Science in Computer Science- **GPA: 3.5**

Lovely Professional University – Punjab, India
Bachelors in Electronics and Communication Engineering

CERTIFICATION

- Certified AWS Developer – Associate Developer.
- Java Professional Certification from HackerRank.

TECHNICAL SKILLS

Programming & Scripting	Java, JavaScript, TypeScript, Python
Frameworks	Spring Boot, Express.js, Microservices architecture.
Web Development	HTML, CSS, React, Angular
API Development and Testing	REST API, Postman, Swagger
Databases	PostgreSQL, Oracle, MongoDB
Cloud Technologies	AWS (S3, EC2, Lambda, Cloud Formation), Microsoft Azure
CI/CD and Automation	Jenkins, Docker, Kubernetes
Software Testing	JUnit, Selenium, SonarQube, Cucumber.
Messaging	Apache Kafka
Monitoring & Debugging	AWS CloudWatch, Splunk
Agile & Collaboration	JIRA, Confluence, Agile Scrum methodologies

EXPERIENCE

Capital One – Richmond, VA <i>Software Engineer</i>	<i>Sep 2024 – Dec 2024</i>
• Designed and implemented middleware services using Java, Spring Boot, Node.js, and Express improving system reliability and scalability. • Built and maintained RESTful APIs, enabling seamless interaction between front-end applications and back-end systems while meeting scalability and availability goals. • Improved database performance by optimizing SQL queries and implementing stored procedures, reducing query execution time by 25%. • Designed and deployed scalable, high-availability solutions on AWS (EC2, S3, Lambda), meeting enterprise application performance goals.	

- Enhanced the software development lifecycle by integrating CI/CD pipelines via Jenkins and automating containerized deployments with Docker and Kubernetes.
- Diagnosed complex technical issues using Splunk and Log4j, resolving production-level problems with minimal downtime
- Contributed to distributed systems design and participated in architecture reviews to deliver technical solutions that meet business requirements.
- Collaborated with QA, DevOps, and product management teams to deliver solutions aligned with business objectives and timelines.
- Performed performance tuning and load testing using Postman and JMeter, ensuring APIs could handle heavy traffic efficiently.
- Actively participated in Agile Scrum ceremonies, contributing to sprint planning, stand-ups, retrospectives, and backlog grooming for efficient goal completion.

Acentra Health – Rockville, MD

Software Engineer

Aug 2023 – Jul 2024

- Designed and developed microservices for healthcare claims processing using Java and Spring Boot, enabling real-time data validation, submissions, and payment workflows.
- Developed and optimized RESTful APIs, improving latency and ensuring seamless communication between healthcare system modules.
- Streamlined database operations by designing efficient SQL queries and stored procedures for PostgreSQL, ensuring data consistency and integrity.
- Integrated Redis for caching frequently accessed healthcare data, reducing database latency and improving overall system responsiveness.
- Leveraged Apache Kafka to implement real-time data synchronization and event-driven architecture for enhanced reliability.
- Implemented advanced strategies like blue-green deployment to ensure minimal downtime during releases.
- Automated testing processes using JUnit and Selenium, increasing test coverage by 25% and reducing production defects.
- Deployed and managed containerized applications with Docker and Kubernetes, ensuring system scalability and fault tolerance.
- Collaborated with cross-functional teams to gather requirements, troubleshoot production issues, and deliver solutions aligned with business objectives.
- Enhanced technical designs by implementing strategies for distributed systems and role-based access control (RBAC) for secure data
- Utilized SonarQube to maintain high code quality and resolve technical debt, ensuring maintainability and adherence to best practices.
- Authored detailed technical documentation, including architecture diagrams and workflows, to support ongoing development and maintenance.

Capgemini Technology Services India

Java Full Stack Developer

Jan 2019 – Aug 2022

Client: NBC Universal Media

- Developed a robust Content Management System (CMS) using Java, Spring Boot, and Angular, streamlining broadcast scheduling and rights management workflows for increased efficiency.
- Built scalable backend services with Node.js and Express, delivering performant APIs supporting enterprise-grade distributed systems, integrating security protocols, and improving data retrieval speeds.
- Migrated legacy monolithic applications to modern microservices architectures, improving scalability and reducing deployment time by 30%.
- Deployed applications on AWS using CloudFormation, ensuring scalability and fault tolerance.
- Designed and optimized SQL queries to enhance database performance in a high-traffic environment.
- Automated testing using JUnit and Selenium, significantly improving test coverage and ensuring high-quality deployments.
- Collaborated with cross-functional teams to identify and resolve defects, ensuring high reliability and optimal performance in deployed applications.
- Conducted root cause analysis and debugged complex system issues using Eclipse and Log4j, minimizing downtime and enhancing system stability.
- Utilized JIRA for effective task tracking, bug management, and maintaining project visibility.

Capgemini Technology Services India

Software Engineer Intern

Sep 2018 – Jan 2019

- Developed web applications using Angular, enhancing UI functionality and features while working alongside senior developers to ensure best practices and innovative solutions.
- Contributed to Agile development cycles, including sprint planning and reviews, which improved team productivity and project visibility.
- Collaborated on the integration of RESTful APIs with scalable cloud solutions on AWS, gaining hands-on experience in cloud deployments.
