PROFESSIONAL SUMMARY

- Having **5 plus years** of experience as a **Java Full Stack Developer**, specializing in designing and developing both client- and server-side enterprise applications using object-oriented principles, advanced enterprise technologies, frameworks & design patterns.
- Skilled in planning and executing coding, programming, and integration tasks aligned with broad objectives and the overall solution architecture, utilizing **Java(8/11/17)**.
- Developed web pages using **HTML5, CSS3, Bootstrap, JavaScript, jQuery, Ajax, AngularJS, and React.js**, ensuring cross-browser compatibility and responsive design. Have knowledge on Server scripting language like **NodeJS**.
- Utilized **Java 11/8** features like Lambda expressions and Stream API for Bulk data operations on Collections which would increase the performance of the Application.
- Experience in Developing Application using **frameworks Spring Dependency Injection (DI), IOC, Aspect oriented Programming (AOP), Instrumentation, Integration, Security, Spring Boot, Struts, IBatis and Hibernate**.
- Expertise in **AWS** such as **ECR, Lambda, S3, Network Security Groups, SNS, SQS, CloudWatch**, and **EKS**.
- Extensive knowledge in database transactions management by integrating **JDBC, Hibernate with Spring Boot**.
- Experience in writing **Ant, Maven build scripts**, providing logging facility using **Log4j** and Writing **JUnit** test cases. Experience with tracking systems like **Jira** and version control tools like **Git, GitHub, SVN** and **CVS**.
- Hands-on Experience in integration with **JUnit**, and **Log4j** frameworks.
- Knowledge on various **Docker** components like **Docker Engine, Hub, Machine, Compose** and **Dockers Registry**. Experience in using Core Technologies **Java, J2EE, Servlets, JSP, JDBC, JavaBeans, JavaScript, JNDI, HTML**
- Experience in developing web applications based on different design patterns such as **Model-View-Controller (MVC), Singleton Pattern, Service Locator, Transfer Objects** etc.
- Familiar with designing and coding Stored Procedures, Triggers, Cursors and Functions using **PL/SQL**. Worked on different servers such as **Apache Tomcat, WebLogic** and **JBoss** for configuring and deployment of the application.
- Experience in installing and configuring **Linux/Unix, Windows-based web/App servers** like **Tomcat, JBoss, WebLogic** and **WebSphere** for Application deployments.
- Having expertise knowledge and experience on **Java 11/8** features like Functional Interfaces Multithreading, Collection **API**, Exceptional Handling, Time **API** and Stream **API**. Strong experience in **Agile (SCRUM)** and **Waterfall SDLC**.
- Hands on experience in implementing **SOAP and REST** web services using **WSDL, CXF2, JAX-WS** and **JAXRS**.

TECHNICAL SKILLS

Languages	Java 17/11/8, PL/SQL
Java/J2EE Technologies	Java, JDBC, JNDI, JMS, JSTL, Java Beans, RMI, Java Multithreading, Generics and Collections, EJB, Tiles
Web Technologies	HTML5, XML, DOM, CSS3, JavaScript, XPath, jQuery, Angular 14/12/10, Bootstrap, React.JS, Node.JS
Methodologies	Agile, Waterfall
Frameworks	Spring, Spring Boot, Hibernate, MVC
Design & GUI Tools	Eclipse, NetBeans, RAD, Visual Studio Code
App servers	IBM WebSphere, Apache Tomcat, BEA Web Logic, JBoss
Databases/Tools	Oracle, SQL Server, My-SQL, PL/SQL Developer
Design/Version Control	GitHub, GIT, SVN, Jenkins
Operating Systems	Windows, Linux, UNIX
Cloud Technologies	AWS, Azure, GCP

Client: Bon Secours Mercy Health, Cincinnati, Ohio, USA**Jul 2024 - Present****Role: Java Full Stack Developer**

Description: Played a key role in developing a patient access and insurance coordination platform for Bon Secours Mercy Health. Designed and implemented backend services to streamline appointment scheduling, real-time insurance verification, and claims processing. Helped reduce claim denials by ~30% and supported uninterrupted care across Ohio, Virginia, and Kentucky during a critical payer agreement transition with Anthem. I developed microservices using Java, Spring Boot, ReactJS, and Hibernate, ensuring seamless data exchange across clinical and operational systems. Leveraging AWS, PostgreSQL, MongoDB, and CI/CD pipelines, I implemented secure, high-performance solutions.

Responsibilities:

- Developed scalable **REST APIs** using **Spring Boot**, leveraging **Spring MVC, Validation**, and **Exception Handling** for clean service orchestration.
- Built reusable UI components with **ReactJS, Redux, Hooks**, and **TypeScript**, improving application performance and maintainability.
- Integrated real-time communication through **WebSockets** for patient alert notifications and status updates across critical workflows.
- Designed **PostgreSQL** schemas and optimized complex joins, indexes, and sequences to support large-scale claims data processing.
- Developed and consumed **Kafka** producers/consumers to handle asynchronous claim and audit event pipelines.
- Created containerized microservices using **Docker**, deployed to **Kubernetes** clusters on **OpenShift** for high availability and resilience.
- Refactored legacy **JSP** and servlet code into modular **Spring Boot** microservices to modernize legacy components and reduce tech debt.
- Implemented CI/CD pipelines using **Git, Jenkins**, and **Maven**, integrating automated test and quality gates via SonarQube.
- Configured **MongoDB** collections to manage semi-structured patient records and care documents efficiently.
- Developed backend functionality in **Node.js/Express.js** to handle user sessions, email communication, and form processing logic.
- Deployed and monitored microservices on **AWS**, utilizing **EC2, S3, Lambda**, and **CloudWatch** for diagnostics and scaling.
- Applied **Hibernate** with **JPA** annotations for object-relational mapping, supporting entity relationships and lazy loading.
- Created feature toggles using **LaunchDarkly** for safe deployment of beta features and staged rollouts in production.
- Built unit and integration tests using **JUnit, Mockito**, and **React Testing Library**, ensuring quality across services and UI components.
- Utilized **OpenAPI/Swagger** documentation for seamless collaboration across frontend and backend teams.
- Developed **PL/SQL** functions in **Oracle** to aggregate and validate insurance data with existing master records.
- Ensured codebase followed **SOLID** and **DRY** principles, enhancing reusability and team collaboration.
- Designed and consumed REST endpoints with strict **JSON** schema validation and role-based access using **Spring Security**.
- Handled authentication via **JWT** tokens and implemented route guards on frontend for session control and role validation.
- Implemented accessibility standards using **ARIA, semantic HTML5**, and **SASS**, improving usability for assistive technology users.

Environment: AOP, API, AWS, Cassandra, EC2, Hadoop, Hibernate, J2EE, Java 17, JDBC, Kafka, Kubernetes, Log4j, Microservices, MVC, Node.js, Oracle, PCF, PL/SQL, Angular, RESTful, Scala, Spark, Spring, Spring Boot, Spring IOC, Spring MVC, SQL, webMethods.

Client: Bank of Montreal (BMO)- Irving, Texas, USA**May 2023 - Jun 2024****Role: Software Developer**

Description: Contributed to an investment and corporate banking platform at BMO, supporting trade execution, portfolio tracking, and financial analytics. Developed backend microservices for secure transaction processing and market data integration, ensuring performance and scalability for high-volume trades. On the frontend, built real-time dashboards enabling traders and clients to monitor positions, analyze trends, and manage liquidity effectively while meeting regulatory standards.

Responsibilities:

- Developed secure backend microservices using **Java 17** and **Spring Boot**, implementing layered architecture and connection pooling.
- Designed real-time financial dashboards in **Angular 8** with **RxJS**, **NgRx**, and **SASS**, supporting large trading datasets and analytics.
- Consumed and published data via **Kafka** topics for streaming transactions, trade logs, and batch event handling.
- Engineered a Spark-based data pipeline for near real-time trade validation, enrichment, and regulatory flagging.
- Implemented **Cassandra** schema for immutable, time-series trade data, ensuring high availability and partitioned access.
- Developed RESTful APIs with **Spring MVC**, using request/response interceptors, DTOs, and error translation mechanisms.
- Integrated role-based access control with **Spring Security**, **OAuth2**, and **JWT**, supporting internal and partner access tiers.
- Refactored service layers using **Java 17** features including **Records**, **Stream Collectors**, and **Pattern Matching**.
- Managed and monitored microservice deployments via **Azure Kubernetes Service (AKS)** with custom Helm charts.
- Created frontend forms with dynamic validation using **Reactive Forms**, **Custom Validators**, and **FormBuilder** in **Angular 8**.
- Deployed production builds using **Azure DevOps** pipelines with automated code quality checks and artifact promotion.
- Performed data integration between **Oracle** and microservices using JDBC and **Spring Data JPA**.
- Wrote test suites with **JUnit**, **Mockito**, **Karma**, and **Jasmine** for both backend and frontend codebases.
- Created Swagger/OpenAPI documentation and mock servers for seamless frontend-backend parallel development.
- Applied performance profiling tools like **JProfiler** and **VisualVM** to detect memory leaks and thread contention.
- Implemented caching strategies using in-memory maps and external **Redis** (via POC), reducing DB roundtrips by ~25%.
- Handled error correlation and tracing using **Azure Monitor**, **Application Insights**, and **log enrichment filters**.
- Led discussions in sprint grooming and daily scrums to align technical solutions with evolving trading requirements.
- Configured **Angular** route guards, lazy loading, and module separation for faster load times and access control.
- Delivered production support by resolving critical defects and participating in on-call rotations for high-severity issues.

Environment: Agile, AOP, API, Azure, Cassandra, CI/CD, DevOps, HTML, Java 17, Jenkins, JMS, JSON, JSP, Kafka, Kubernetes, Oracle, React, RESTful, Spark, Spring, Spring Boot, Spring IOC, Web Services, XML

Client: (Cognizant) VMware - Chennai, India

Aug 2021 - Sep 2022

Role: Java Developer

Description: VMware LLC is an American cloud computing and virtualization technology company. Implemented the data access layers and ORM (e.g., Hibernate) for seamless database interaction. Created dynamic, responsive frontend user interfaces with JavaScript frameworks.

Responsibilities:

- Good Knowledge in developing Express, working with **Microservices** backend with **RESTful**, **GraphQL**, **gRPC** type of services.
- Maintain Interface compatibility and concurrency in the project using **Java 11** new features like default, static methods, and **Concurrency API**.
- Involved in component development using **J2EE** principles and used design patterns such as Singleton, Factory and Data Access Object (DAO) in the implementation of the application.
- Used **React** as framework to create a Single Page Application (**SPA**) which can bind data to specific views and data with server.
- Extensive experience in developing **Microservices** using **Spring** frameworks and followed domain driven design.
- Extensively used **JUnit** and **JMockit** for writing unit test cases. Developed new user facing features using **React.js/Redux**.
- Migrated a monolithic application to **Microservices architecture** using **Spring Boot** and 12-factor app methodology, deploying and scaling services in **PCF** with custom manifest files.
- Used **jQuery**, **JavaScript**, **HTML5**, **CSS3**, **Bootstrap** and various **jQuery** plugins to improve **UI/UX** experience and achieve cross-browser compatibility.
- Experience in managing **MongoDB** environment from availability, performance, and scalability perspectives. Executing tasks on **XML registry**, **XSLT/XQuery**, and transformation capabilities.
- Designed and developed the **ETL** solution using the request module and the **OAuth 2.0** protocol.

- Have replaced the **Java** Messaging Service (**JMS**) calls with **AWS SQS** and used **AWS SDK** to connect with **Amazon SQS** for bulk email processing.
- Implemented transaction management using **Spring AOP** and used **Spring** Aspects for implementing logging functionalities.

Environment: API, AWS, Bootstrap, CSS, HTML5, IntelliJ, Java 11, JavaScript, JMS, jQuery, JUnit, Microservices, MongoDB, OAuth 2.0, PCF, React, RESTful, S3, Spring, Spring Boot, XML

Client: AstraZeneca - Chennai, India

Dec 2019 - Aug 2021

Role: Software Engineer

Description: AstraZeneca plc is a British-Swedish multinational pharmaceutical and biotechnology company. I integrated the third-party services or internal systems into applications as needed. Worked within Agile or Scrum teams to meet project deadlines and deliverables.

Responsibilities:

- Involved in Client Requirements gathering, Analysis, Design, Development and Testing of the application using **Agile** methodology.
- Implemented second level of caching with **Hibernate** to improve read performance.
- Developed **RESTful web services** using **Spring Boot** microservices architecture, performing unit and functional testing with diverse data sets.
- Implementing **keyspaces, tables, and indexes** in **Cassandra** database to suit application needs.
- Strong experience on Devops essential tools like **Kubernetes, Git, Jenkins, Ant, Maven** and deployed/managed applications to managed cloud services in **Pivotal Cloud Foundry**. Supports different markets for alerts and bugs, **Analyze** and understand fix them.
- Developed the **REST Microservices** using **Java 1.8, Scala**, on **IntelliJ** platform by gathering the knowledge of previous phase resources and integration with **Oracle**.
- Designed extensive additions to existing **Java** Web Application utilizing Service Oriented Architecture (**SOA**) techniques.
- Involved in Migrating existing application into **Microservices** architecture using **REST APIs** and **Spring Boot**.
- Unit testing through **JUnit** & Integration testing in staging environment.
- Strong Database design and development experience, which includes developing Stored Procedures, functions using **SQL** and **PL/SQL** in **PostgreSQL** databases Along with experience in **Data, Multithreading** and have worked on search techniques and algorithms.
- Migrated **SOAP** web service resources to **Spring RESTful** webservices resources using **Spring RESTAPI** with **Spring Boot**.
- Proficiency in writing **JPA** queries using **JPQL** (Java Persistence Query Language) and Criteria queries for database operations.

Environment: Agile, API, Cassandra, DB2, Git, Hibernate, IntelliJ, Java 8/11, Jenkins, JMS, JUnit, Kubernetes, Microservices, Oracle, PL/SQL, PostgreSQL, RESTful, Scala, SOA, SOAP, Spring, Spring Boot, SQL, Web Services.

EDUCATION

- Master's in computer science from University of Missouri Kansas City.
