Summary

Business Analyst with 4+ years of experience in requirements elicitation, process improvement, data analysis, and cross-functional collaboration. Skilled in translating business needs into functional solutions, optimizing workflows, and enhancing reporting accuracy. Adept at documentation, stakeholder management, and driving data-informed decision-making to improve operational efficiency and organizational transparency.

Technical Skills

- Business Analysis & Project Tools:** Jira, Confluence, Notion, Trello, Microsoft Teams, SharePoint, TestRail, Microsoft Visio, Azure DevOps, HP ALM, Selenium, Lucidchart, Miro, Whimsical, Notion, MS Project
- Documentation & Methodologies:** BRD, FRD, User Stories, Acceptance Criteria, Traceability Matrix, BABOK, MoSCoW Prioritization, Agile (Scrum, Kanban), Waterfall, BPMN, Lean Six Sigma, SDLC, Process Mapping, Requirement Elicitation, GAP Analysis, RCA, SWOT Analysis, Value VSM
- Analysis & Visualization:** SQL, Python, R, Power BI, Tableau, Qlik Sense, Excel (Pivot Tables, VBA/Macros, What-if Analysis), Bloomberg Terminal, SAP S/4HANA Analytics, Dynamics 365, Statistical Analysis, Hypothesis Testing, Data Modeling, Predictive Analytics, KPI & Metrics Reporting
- Database & BI Tools:** SQL Server, MySQL, Oracle, Data Warehousing (ETL, OLAP), AWS, Azure, GCP, Data Lake Concepts, API Data Integration
- UI/UX & Workflow Design:** Figma, Balsamiq, Miro, Whimsical, Lucidchart, Wireframing, Prototyping, User Journey Mapping, A/B Testing
- Testing & Quality Assurance:** UAT Planning, Test Case Design, Regression Testing, Defect Tracking (JIRA/TestRail/Azure DevOps), Automated Testing (Selenium, HP ALM), User Acceptance Testing (UAT), Defect Triage, End-to-End Validation
- Integration & Systems Knowledge:** API Understanding, System Integration Concepts, Loan IQ, AFS, SAP FI/CO, Oracle GL, Digital Banking Platforms, Financial Data Pipelines, AI-Enabled Lending Insights, Data Quality Monitoring, Cloud Integration

Professional Experience

Business Analyst, KPMG LLP

01/2024 – Present | Remote, USA

- Worked on the AI-Driven Risk & Compliance Intelligence Modernization Program, collaborating with audit and advisory teams to gather requirements, create BRDs and Lucidchart maps, improving documentation clarity, traceability, and alignment by 20%.
- Designed and implemented optimized workflows using MS Visio and AI analytics to resolve client reporting delays, partnering with risk, finance, and operations teams, reducing processing time by 30%, errors by 15%, and improving transparency.
- Partnered with SAP FI/CO and Oracle ERP advisory teams to validate financial compliance workflows, developed FRDs, executed UAT, and delivered insights via PowerPoint, improving post-deployment accuracy by 25% and ensuring seamless financial reporting.
- Built Power BI and Excel VBA dashboards integrating SQL and Python for AI audit model performance tracking, collaborating with data analytics and advisory teams, improving model accuracy by 25%, reporting efficiency by 35%, and automation in financial reconciliation activities by 30%.
- Conducted stakeholder interviews, gap analysis, and process re-engineering to improve AI-supported enterprise risk scoring for client assurance services, documented AS-IS and TO-BE states in Jira and Confluence, enabling a 15% improvement in real-time monitoring accuracy.
- Led API integration requirements analysis for AI-driven compliance data ingestion, creating sequence diagrams, data dictionaries, and validation rules using Swagger, JSON schema, and SQL, improving overall reliability by 20% and reducing SIT defects.

Business Analyst, Ameriprise Financial Services, LLC

01/2020 – 07/2022 | India

- Managed stakeholder interviews and JAD sessions for the Financial Insights and Data Governance Initiative, preparing BRD and FRD documents to translate advisory and compliance needs into functional conditions that improved requirement clarity and downstream delivery efficiency by 28%.
- Analyzed advisory, investment, and operational requirements using SQL and Excel, converting business needs into actionable insights that enhanced forecasting accuracy by 22%, reduced delivery timelines by 18%, and strengthened alignment between business objectives and analytical outputs.
- Developed Tableau dashboards integrating advisor performance, client segmentation, and investment product metrics via real-time API connections, improving KPI visibility by 31%, reducing manual reporting and aiding faster, insight-driven results for wealth managing headship.
- Collaborated with ETL, QA, and data engineering teams to design and optimize automated data pipelines using SQL and Python, increasing data transformation reliability by 35%, reducing latency by 20%, and supporting high-quality regulatory and operational reporting processes.
- Implemented a Data Quality Monitoring Framework for financial datasets by conducting EDA, variance checks, and rule-based validations, improving data accuracy by 45%, reducing manual data errors by 30%, and ensuring consistent reporting integrity across compliance functions.
- Documented workflows, data lineage, and operational processes using MS Visio and version-controlled repositories, improving transparency by 25%, accelerating audit readiness, and creating structured, scalable documentation supporting future wealth management system enhancements.
- Delivered analytical presentations and financial insights using PowerPoint and Excel dashboards, improving reporting efficiency by 50%, supporting decisions, and strengthening alliance across advisory, compliance, operations, and leadership teams via effective communication of sanctions.

Education

Webster University, Missouri, USA

Masters of Science in Information Technology Management, Computer Science

08/2022 – 05/2024

Projects

Customer Churn Prediction Dashboard

- Developed an end-to-end predictive analytics dashboard using Python, SQL, and Power BI to identify high-risk customers, visualize churn trends, and provide actionable insights, improving customer retention strategies and enabling data-driven decision-making across business teams.

Automated Financial Reporting System

- Designed and implemented an automated reporting system using Excel VBA, SQL, and Tableau to streamline monthly financial reporting, reduce manual errors, enhance data accuracy, and improve cross-departmental efficiency in compliance and operational reporting processes.
