

Rama Gowtham Reddy Padala Python Developer

rama@careeremail.net | (561) 887-1865 | USA | [Linkedln](#)

Summary

Detail-oriented and results-driven Python Developer with 3+ years of experience designing and implementing scalable APIs, microservices, ETL pipelines, and cloud-native applications. Skilled in developing high-performance backend systems, real-time streaming pipelines, and BI solutions for finance and enterprise domains. Proven track record of delivering measurable outcomes including 50%+ process efficiency improvements, 35%+ faster ETL pipelines, and 40% faster deployments. Expert in Flask, Django, FastAPI, PySpark, and Kafka, with strong exposure to Snowflake, Airflow, Docker, Kubernetes, Terraform, and AWS/GCP/Azure. Adept at Agile/Scrum, DevSecOps, CI/CD automation, API security, caching strategies, and monitoring with ELK/Dynatrace. Recognized for optimizing mission-critical systems, collaborating across teams, and ensuring compliance with NIST/FedRAMP security frameworks.

Technical Skills

- Programming & Frameworks:** Python, Flask, Django, FastAPI, Jinja2, Scala, Go, Shell (Bash/Perl), REST, GraphQL
- Databases & Data Warehousing:** PostgreSQL, MySQL, SQLite, SQLAlchemy, Snowflake, Redshift, BigQuery, Data Lakes
- Cloud Platforms:** AWS (EC2, Lambda, RDS, ECS, Glue, Redshift, Athena, CloudWatch, S3), Azure (App Service, Blob Storage, Cosmos DB), GCP (Cloud Functions, BigQuery, Pub/Sub)
- Data Engineering & Streaming:** Apache Kafka, PySpark, Hadoop, Celery, Redis, Dremio, Airflow, ETL/ELT pipelines, Data Lakes
- DevOps & Infrastructure as Code:** Docker, Kubernetes, Jenkins, GitHub Actions, GitLab CI/CD, Azure DevOps, Terraform, AWS CloudFormation
- BI & Visualization:** Power BI, Tableau, Looker, Superset
- Monitoring & Logging:** Dynatrace, ELK Stack (Elasticsearch, Logstash, Kibana), Prometheus, Grafana, Sentry
- Security & Compliance:** DevSecOps, API Security, OAuth2, JWT, SSL/TLS, Security Best Practices, NIST/FedRAMP Awareness
- Caching & Optimization:** Redis, Memcached, CDN integrations, Query Optimization, Low-Latency System Design
- Methodologies:** Agile (Scrum with Jira), SDLC, Semantic Layer Architecture, TDD/BDD, CI/CD Automation
- Testing & Documentation:** Pytest, Unittest, Postman, Swagger/OpenAPI, Test-Driven DevelopmentProfessional

Experience

Python Developer, Marsh McLennan 03/2024 – Present | Remote, USA

- Designed and developed a claims automation platform using Flask/Django, automating 75% of manual workflows and cutting turnaround time by 50%. Architected microservices-based APIs with FastAPI, ensuring scalability, modular deployments, and 99.9% uptime.
- Built secure RESTful APIs with OAuth2/JWT authentication, enabling seamless integrations with PostgreSQL and third-party vendor systems.
- Integrated PySpark for parallelized ETL pipelines, reducing batch processing time by 35% across large-scale claims datasets. Engineered Kafka streaming pipelines handling 100k+ daily events, ensuring near real-time synchronization between backend and frontend systems.
- Optimized backend workflows using Celery + Redis for asynchronous task execution, enabling the system to handle 10k+ claims/day with zero downtime. Implemented caching layers (Redis, Memcached) to reduce API response times by 40% and improve user experience.
- Containerized services with Docker, deployed to AWS ECS, and automated workflows with Jenkins CI/CD pipelines, achieving 40% faster releases.
- Used CloudWatch, ELK, Dynatrace for monitoring and alerting, reducing production incidents by 30%. Partnered with QA teams to design automated unit, integration, and load test suites with Pytest, achieving 95%+ code coverage.
- Worked closely with Agile teams (Scrum ceremonies, Jira tracking), improving sprint delivery predictability by 20%. Provided API documentation with Swagger and conducted developer training sessions for faster onboarding of new team members.
- Collaborated with cloud engineers to optimize AWS infrastructure costs, reducing monthly spend by 15%. Implemented API rate limiting, logging, and error-handling strategies, improving system resilience and preventing service overloads.

Associate Python Developer, Novisync 01/2021 – 12/2022 | A.P, India

- Developed a rule-based chatbot system in Flask/Jinja2 that processed 15,000+ monthly queries with an average 30% faster resolution rate.
- Reduced support team workload by 25% by automating FAQs, workflows, and escalation flows. Built chatbot-CRM integration APIs and implemented WebSocket-based real-time updates across web and mobile clients.
- Designed Power BI dashboards tracking usage metrics, reducing KPI reporting delays by 40%. Implemented SQLAlchemy ORM with PostgreSQL, ensuring optimized query performance and secure data storage.
- Enhanced system resilience with error handling, logging, and retry mechanisms, reducing downtime by 20%. Containerized chatbot with Docker and deployed to Azure App Service, ensuring zero-downtime deployments.
- Configured Azure Blob Storage for session history and logs, aligning with data retention and compliance policies. Built Azure DevOps CI/CD pipelines, reducing deployment times by 45%.
- Wrote comprehensive Pytest suites and set up test automation pipelines for continuous testing during integration. Authored API documentation with Swagger, ensuring smoother cross-team collaboration and third-party integration.
- Participated in daily stand-ups, sprint reviews, and backlog refinement sessions, increasing Agile delivery efficiency. Strengthened chatbot security with OAuth2 authentication, SSL/TLS encryption, and DevSecOps practices, preventing potential vulnerabilities.
- Collaborated with the Product Management team to align chatbot features with customer satisfaction KPIs, boosting adoption by 20%.

Education

Master of Science (M.S.) in Computer and Information Sciences

Florida Atlantic University

01/2023 – 12/2024 | Boca Raton, FL, USA

Bachelor of Technology (B.Tech) in Electronics and Communication Engineering

SRI Vasavi Engineering College

06/2017 – 06/2021 | A.P, India
