

Ramima Khokhar

Business Analyst

✉ ramimakhokhar284@gmail.com ☎ (571) 733-0270 📍 Lansdowne, VA 20176

Professional Summary

- Business Analyst with 3+ years of experience delivering data-driven solutions in financial services and retail, specializing in BI reporting, data modeling, and stakeholder collaboration.
- Built and optimized interactive dashboards in Power BI and Tableau, applying advanced DAX, calculated fields, and performance tuning techniques to support executive decision-making.
- Developed scalable data models using SQL with CTEs and window functions, enhancing reporting efficiency and ensuring accurate metric outputs.
- Automated ETL and reporting pipelines using Azure Data Factory and Alteryx, streamlining cross-platform data workflows and reducing delivery delays.
- Leveraged Python and R to automate financial analysis, generate repeatable forecasting models, and extract patterns from complex data sources.
- Applied statistical methods such as regression analysis and hypothesis testing to uncover insights on revenue trends, customer behavior, and operational gaps.
- Conducted detailed data audits and implemented reconciliation processes to maintain consistency across internal and external reporting systems.
- Collaborated with cross-functional teams in Agile environments, contributing to functional specifications, refining user stories, and supporting continuous delivery of BI initiatives.

Technical Skills

Business Intelligence & Dashboards – Power BI, Tableau
Data Modeling & Querying – SQL (CTEs, window functions), DAX
ETL & Data Integration – Alteryx, Azure Data Factory, ERP Data Handling
Programming & Automation – Python, R, Jupyter Notebooks
Statistical & Data Analysis – Regression Analysis, Hypothesis Testing, Trend Analysis, Correlation Analysis
Data Management – Data Auditing, Data Reconciliation, Data Quality Validation
Workflow & Process Improvement – Workflow Documentation, Process Optimization
Project Management – Agile Methodology, User Stories, Functional Specification Writing

Work Experience

Business Intelligence Analyst
Morgan Stanley

Feb 2024 – Present | New York, NY

- Built interactive Power BI dashboards using advanced DAX, dataflows, and RLS, improving both performance and secure data access across financial reporting streams.
- Developed SQL-based data models using CTEs, window functions, and optimized queries to streamline financial KPI delivery and reduce reporting latency.
- Maintained and configured Azure Data Factory pipelines, integrating data from Oracle Cloud ERP into enterprise BI systems with minimal downtime.
- Created Alteryx workflows to automate data preparation, join multiple financial data sources, and support internal audit and compliance analytics.
- Leveraged Python and R in Jupyter Notebooks to automate report generation and perform advanced financial modeling for forecasting and variance analysis.
- Applied regression analysis, time-series modeling, and hypothesis testing in R to uncover root causes of portfolio risk and revenue shifts.
- Conducted comprehensive data audits and implemented robust reconciliation processes to ensure alignment between upstream systems and BI outputs.
- Analyzed recurring operational inefficiencies, documented bottlenecks, and recommended process adjustments to improve workflow speed and reporting consistency.
- Wrote detailed functional specifications and collaborated with both business and technical teams in an Agile environment to deliver enhancements aligned with stakeholder needs.

Business Analyst <i>Dollar Tree</i>	Mar 2022 – Feb 2024 Chesapeake, VA
• Built interactive Power BI reports and Tableau dashboards to monitor category sales and promotional performance, applying DAX for calculated columns and measures. • Wrote custom SQL queries to join order, inventory, and customer data, supporting ad-hoc reporting needs across marketing, merchandising, and supply chain teams. • Designed Alteryx workflows to automate weekly reporting cycles, integrating multiple data sources and eliminating manual processing steps from Excel-based reports. • Monitored Azure Data Factory pipelines used for syncing ERP data, identified failures or delays, and coordinated resolutions with the data engineering team. • Cleaned and transformed large datasets using Python in Jupyter Notebooks, and conducted exploratory analysis in R to understand customer segmentation and product demand. • Pulled and validated ERP system data to support internal audits and resolve discrepancies between transactional systems and reporting outputs. • Performed trend analysis using statistical techniques such as correlation and central tendency measures to identify seasonal patterns and pricing impact. • Conducted data audits across e-commerce and POS systems, reconciled mismatches, and flagged data integrity issues for upstream correction. • Documented current-state workflows across reporting and fulfillment processes, identified redundant steps, and proposed changes to improve reporting consistency and team efficiency. • Participated in Agile sprint ceremonies, contributed to user story documentation, and worked closely with stakeholders to clarify reporting requirements and acceptance criteria.	

Education	
M.S. in Business Analytics <i>Trine University</i>	Aug 2025 – Present Reston, VA
Bachelor in Business Administration <i>SZABIST</i>	Jan 2018 – Jan 2022 Karachi, Pakistan
