Ram Pathak

Java Developer

PROFILE

- Over 5+ years of professional experience in designing and developing web-based enterprise applications using Java, Kotlin, and J2EE technologies.
- Extensive experience across all phases of the Software Development Life Cycle (SDLC), including requirements gathering, analysis, design, development, testing, deployment, and maintenance within Agile, Scrum, and Waterfall methodologies.
- Proficient in building scalable Microservices using Spring Boot, Spring WebFlux, and Kotlin, ensuring modular, flexible, and loosely coupled architectures.
- Hands-on experience with frameworks such as Spring MVC, Spring Boot, Hibernate, Struts, Apache Wicket, JSF (Richfaces, PrimeFaces), JUnit, Mockito, and ActiveMQ for enterprise-level application development.
- Implemented SOA-based architectures with RESTful APIs and SOAP web services, leveraging tools like Jersey, Apache Axis, and Spring Web Services for seamless system integration.
- Expertise in front-end development using HTML5, CSS3, JavaScript, AJAX, Bootstrap.js, Angular.js, React.js, Backbone.js, Node.js, and jQuery, delivering responsive and adaptive web applications.
- Integrated AWS services including S3, Lambda, API Gateway, RDS, DynamoDB, and EC2, enabling cloud-native solutions and serverless computing.
- Experience in building middleware solutions using Oracle SOA Suite, including BPEL, Mule ESB, WSM, Oracle Rules Engine, BPM, and Worklist Applications for enterprise integration.
- Developed and maintained responsive web applications using Responsive Web Design (RWD) principles for enhanced user experiences across devices.
- Skilled in XML technologies including XML, XSL, XSD, DTD, and XSLT, with expertise in SAX and DOM parsers for XML data processing.
- Proficient in UNIX shell scripting and Java scripting for automating tasks and enhancing system operations.
- Advanced SQL and PL/SQL programming skills with hands-on experience in Oracle, Postgres, and MySQL for data manipulation and management.
- Developed asynchronous event-driven services using Kafka, RabbitMQ, and JBoss AMQ, optimizing messaging and data streaming workflows.
- Configured CI/CD pipelines with Jenkins, Maven, Gradle, Docker, and Kubernetes for continuous integration, deployment, and scaling of microservices.
- Leveraged caching mechanisms such as Redis and Memcached to enhance performance and scalability of distributed applications.
- Implemented RESTful APIs with OAuth2 and JWT-based security protocols, ensuring robust authentication and authorization mechanisms.
- Experience with monitoring and logging frameworks such as ELK Stack (Elasticsearch, Logstash, Kibana), Prometheus, and Grafana for observability and performance tracking.
- Collaborated with cross-functional teams to gather requirements, define technical specifications, and develop solutions aligned with business goals.

- Utilized microservice patterns like Service Discovery, Circuit Breaker, and Load Balancing to enhance application resilience and scalability.
- Expertise in building enterprise-grade applications using tools like Eclipse, IntelliJ IDEA, and JDeveloper for faster development cycles.
- Configured and deployed applications on servers such as JBOSS, Apache Tomcat, and WebLogic for seamless production releases.
- Mentored junior developers and conducted code reviews, ensuring adherence to coding standards, best practices, and design patterns such as Singleton, Factory, Builder, and Observer.
- Conducted unit testing using JUnit and Mockito, along with integration testing and end-to-end testing to ensure application quality and reliability.
- Enhanced application performance by tuning SQL queries and optimizing data pipelines with Spring Data JPA and Hibernate Criteria Queries.
- Designed and implemented scalable microservices using Spring Boot, leveraging Kotlin and Java for high-performance applications.
- Automated deployment pipelines using Terraform and Ansible, ensuring reproducible infrastructure as code for deployment automation.
- Expertise in agile methodologies, participating in Daily Standups, Sprint Planning, Retrospectives, and delivering shippable increments within each sprint cycle.

SKILLS

Languages: C, C++, Java, PL/SQL, Kotlin, Python

J2EE Technologies: Servlets, Spring Boot, Spring Webflux, Struts, Hibernate, Spring, Log4j, Web services using SOAP and RESTful, XML, JDBC, EJB, JSP, JDBC, JSF 1.2/2.0, JMS, Groovy.

Databases: MySQL, ORACLE, NoSQL and DB2.

Web Technologies: JSP, JSF, AngularJS, Bootstrap, AJAX, Java Script, EXT JS, XML, HTML, XML, CSS 3.

Tools: & Utilities: Enterprise Architect, Visual SourceSafe, Rational Rose 200, Ant, JIRA, Netbeans, Cruise Control, Eclipse, Rational ClearCase/ClearQuest.

Domain Knowledge: Banking, Insurance, Consulting and Healthcare.

IDE: Eclipse, Spring Tool Suite, RAD and Net Beans.

Application Servers: Websphere, Weblogic, Jetty, Jboss and Tomcat.

Platforms: Windows, Unix, Linux and Mac OS X.

EDUCATION

Bachelors In Computer Engineering

EXPERIENCE

Capital One - McLean, VA

Java Developer

Jan 2024 to Current

- Designed and developed web pages using HTML5, JSP, AJAX, JSTL, Angular, and CSS, ensuring a responsive and dynamic user experience.
- Developed custom tags using JSTL to encapsulate complex logic and improve maintainability of the application.
- Wrote optimized stored procedures, triggers, and used PL/SQL on Oracle database to ensure efficient data management and business logic execution at the database level.
- Used Node.js for server-side validation to process requests in real-time and ensure data integrity.
- Utilized the Spring Boot Framework for implementing IOC (Inversion of Control), JDBC (Java Database Connectivity), ORM (Object-Relational Mapping), AOP (Aspect-Oriented Programming), and Spring Security to develop a robust and secure application architecture.
- Contributed to Core Banking Implementation using Apache ActiveMQ and Apache Camel, facilitating reliable messaging and integration within the banking ecosystem.
- Involved in performance tuning and scalability of the application by optimizing queries, improving memory management, and enhancing multi-threading capabilities to handle increasing traffic and user load.
- Provided production support by monitoring and troubleshooting issues, ensuring high availability, and quickly resolving performance bottlenecks.
- Developed RESTful Web Services in the service layer, following SOA (Service-Oriented Architecture) principles to enable loose coupling and facilitate the integration of diverse systems.
- Developed web-based applications while adhering to new development specifications involving Java/J2EE, Spring, Hibernate, Web Services, Oracle, JavaScript, jQuery, Ajax, and AngularJS to ensure seamless functionality across different platforms.
- Consumed SOAP web services using Spring to interact with external systems and provide standardized interfaces for communication.
- Involved in integration and development of Mule services as part of both consumer and producer, ensuring smooth data exchange and messaging between applications.
- Developed Maven scripts to build and deploy the application onto WebLogic Application Server, leveraging UNIX shell scripts to automate deployment processes, reducing manual intervention and increasing deployment speed and reliability.
- Used Maven for lifecycle management of the project, including dependency management, building, testing, and deployment, ensuring a streamlined development process.
- Unit tested the complete application using JUnit, ensuring comprehensive test coverage and catching potential issues early in the development lifecycle.
- Used Apache ActiveMQ as a messaging platform to ensure reliable and scalable message delivery between distributed components of the system.
- Utilized Splunk to search the application logs for troubleshooting and performance monitoring, while using Log4j for logging to capture detailed application activity and help in debugging and issue resolution.
- Deployed the application using WebLogic, ensuring that the system is up and running on a stable and efficient application server.
- Developed the presentation layer using Struts Framework, JSP, Servlets, JavaScript, jQuery, and AJAX, providing an interactive and dynamic user interface that integrates smoothly with backend services.
- Developed Web Services in the service layer and implemented RESTful services based on SOA architecture, enabling easy communication between different components of the system.

- Created Maven scripts for building and deploying the application onto WebLogic Application Server and implemented UNIX shell scripts for automated deployment processes to ensure faster and more reliable deployments.
- Used Maven for managing the entire lifecycle of the project, ensuring consistency and efficiency across different stages of development.
- Unit tested the application with JUnit, ensuring that individual components and modules perform as expected and that potential issues are addressed during development.
- Utilized Apache ActiveMQ for message brokering between various services, enabling asynchronous communication and improving the overall efficiency of the application.
- Leveraged Splunk to perform real-time log analysis, ensuring any application issues are detected and resolved promptly, while using Log4j for detailed logging of system behavior.
- Deployed the application using WebLogic, ensuring reliable performance in a production environment.

Environment: Core Java, JSP, Servlets, JQuery, JSTL, AJAX, Splunk, Struts, Restful, Apache ActiveMQ, Spring Core, Spring MVC, JUnit, ESB MULE, JSTL, SOAP UI, Spring Tool Suite, Weblogic, Maven, SVN.

CareFirst Inc - Reston, VA

Java Developer

Oct 2022 to Dec 2023

- Developed the presentation layer using HTML, JSP, JSF MVC, JQuery, and JavaScript, ensuring a dynamic and responsive user interface.
- Responsible for developing middleware components using Java/JEE, enabling seamless integration between the front-end and back-end layers.
- Managed Build and Release Management involving Unix/Linux Administration, providing 24/7 Production Support for post-production maintenance and issues, ensuring the stability and uptime of the application.
- Supported development teams in debugging Java issues, exception handling, and addressing environmental issues to maintain smooth application functionality.
- Set up Java applications to be deployed onto different environments, ensuring the system is adaptable to various configurations and requirements.
- Configured and maintained JBoss and Tomcat servers for Java application deployment, ensuring proper deployment configurations and environment management.
- Developed customized Spring Multi-Action controllers for handling similar operations and configured Spring and Spring JDBC frameworks to develop a fully-fledged MVC and database interaction application. Implemented various design patterns including Singleton, Business Delegate, Value Object, and Spring DAO.
- Used Spring JDBC to write DAO (Data Access Object) classes, enabling efficient interaction with the database and ensuring smooth data retrieval and updates.
- Mapped business objects to the database using Hibernate, ensuring object-relational mapping (ORM) and facilitating seamless interaction between the application and the database.
- Involved in the integration and development of Mule services, playing a key role in both consumer and producer integrations, ensuring smooth and reliable data exchange.
- Worked on providing security to the application by configuring users and roles in LDAP, ensuring secure access control and user authentication.
- Configured WebSphere 6.0 Server for deploying web and business components, ensuring the application is deployed in a stable and scalable environment.
- Developed the application using Eclipse IDE and used Ant as a build and deploy tool, automating the build process and simplifying deployment procedures.

- Configured Log4J to log Warning and Error Messages, ensuring proper logging and monitoring of application behavior.
- Used MySQL as the database and utilized Toad for query execution. Involved in writing SQL scripts and PL/SQL code for stored procedures and functions, ensuring smooth database operations and data integrity.
- Integrated Spring Boot to simplify and accelerate the development of microservices, enabling rapid deployment of standalone, production-ready services with minimal configuration.
- Used Spring WebFlux for reactive, non-blocking programming, enabling the handling of high volumes of concurrent requests with minimal resource consumption.
- Implemented Kotlin to streamline development with concise, expressive syntax and seamless integration with Java, improving maintainability and code readability.
- Architected and implemented a Microservices architecture to break down large monolithic applications into smaller, more manageable, and independently deployable services, promoting scalability, fault tolerance, and ease of maintenance.

Environment: Java 7, Eclipse, XML, JSP, Servlets, Tomcat Server 7.x, Log4j, Ant, SQL Developer, Serena, Vss, Oracle 11g and MS SQL.

Nepal Life Insurance - Kathmandu Nepal

Junior Java Developer

(Sept 2019 to Aug 2022)

- Integrated Spring Boot to simplify microservices architecture, enabling rapid development of production-ready services with minimal configuration.
- Utilized Spring WebFlux for reactive programming, optimizing resource usage and scalability in handling high concurrency.
- Implemented Kotlin for concise and expressive code, improving maintainability and readability of the application.
- Architected and implemented Microservices to break down monolithic applications, enhancing scalability and fault tolerance, and simplifying deployment and maintenance.
- Interacted with business analysts to gather updated requirements for the Universal Order Capture system, ensuring clear communication of business needs.
- Extensively used DOJO toolkit to construct Ajax requests and build dynamic web pages using JSP, Portlet, Servlet, DHTML, AngularJS, Bootstrap, and JQuery to create responsive and interactive user interfaces.
- Involved in developing web pages using Responsive Web Design for mobile applications, ensuring seamless user experience across devices.
- Designed class, activity, and sequence diagrams to document system design and workflow, ensuring clarity and understanding for development.
- Developed a management console for workflow management and reporting using Apache Wicket and JQuery, streamlining administrative tasks.
- Applied extensive J2EE design patterns such as Service Locator, DAO, Factory pattern, Business Delegate, Session Facade, MVC, and Singleton to ensure maintainable and scalable architecture.
- Developed Web services in the service layer and implemented Web Services based on SOA architecture with RESTful to enable efficient communication between services.
- Involved in the design and development of data synchronization for a remote app, using SQL Anywhere, ensuring smooth data exchange between distributed systems.
- Contributed to the development of transaction management using Spring, ensuring reliable and consistent database transactions.

- Developed aspects for the application using Spring AOP, providing cross-cutting concerns like logging, security, and transaction management in a modular manner.
- Used Apache CXF as the web service deployment framework, facilitating the development and deployment of SOAP-based web services.
- Used Mule ESB platform to deliver REST-based APIs, enabling efficient and scalable service integration across different systems.
- Implemented business processes to develop email notification components using JMS API, enhancing communication and system alerts.
- Mapped database objects corresponding to DB2 database tables using POJO classes, ensuring proper interaction between the database and the application.
- Developed a persistence framework using Hibernate, facilitating object-relational mapping (ORM) and efficient database operations.
- Practiced Test-Driven Development (TDD) using JUnit, ensuring high-quality code through automated testing.
- Used Atlassian JIRA for bug and issue tracking, ensuring efficient project management and task resolution.
- Established a Continuous Integration (CI) process for application deployments. Set up the server and created Jenkins jobs to build and deploy the application in different environments using Maven and various profiles.
- Redesigned and implemented the AJAX / synchronous implementation of the client web portals for a WCF-based SOA Web application, enhancing the user experience and performance.
- Worked with the quality assurance team to identify bugs in the system and participated in Production support and troubleshooting of production issues, ensuring application stability.

Environment: Java Collections, Multi-Threading J2EE, RAD, WebSphere, Restful, Apache wicket, SPRING, Hibernate, DOJO, Java Script, Angular JS, Jenkins, JMS, CXF, JAX API, XML, JIRA, JUnit, CVS, ESB Mule.
