

Name: Ramya Krishna Gadiparthi
E:ramyakrishnagadiparthi@gmail.com
Ph#: +1(214) 269 7638

Professional Summary:

- Over **5+ years** of experience as **Full Stack Developer** in software development with focus on design, development and testing of responsive web applications and micro services using cloud technologies
- Experience on developing web applications using **Spring Boot, Spring Security, Spring Core, Spring MVC, Spring AOP, Spring Actuator, Spring ORM, Spring JPA and Spring REST**.
- Experience on **Spring Framework** modules (**Spring Core, Spring Web, Spring JDBC, Spring Rest Services, Spring Data Access/Integration, Spring Batch, Spring AOP, Spring Transaction and Spring Security**).
- Experience in developing Micro services using **Spring Boot, Spring MVC, Spring Security, Spring IOC, Spring DAO, Spring Data and Node.JS** to build more physically separated modular applications which will improve scalability, availability and agility of application.
- Experienced in **Hibernate Framework** for the Object Relational Mapping therefore simplifying the Data creation, Data manipulation and Data Access.
- Experienced in developing front end applications using **HTML4/5, XHTML, DHTML, CSS2/3 (using SASS and LESS), Bootstrap, Angular JS, JQuery**, with **NGRX** and developing dynamic web pages.
- Experience in developing application in **Single Page Application (SPA's)** using various JavaScript frameworks such as **Angular JS and React JS**.
- Experienced in Node environment using **Node.JS, NPM**.
- Experience in **XML** and related technologies like **XSL, XSLT, XPATH** and parsers like **JAXP (SAX, DOM)** and **JAXB**.
- Experience in developing application with use of different Architectures and Frameworks like **Model View Controller (MVC), Data Access Object (DAO), Data Transfer Object and POJO**.
- Hands on Experience in **AWS** Services like **EC2, S3, Elastic Beanstalk, ELB (Load Balancers), RDS, VPC, Route53, Cloud Watch, Cloud Formation, IAM, SNS**.
- Experience on creating **Docker container** images, pushing images, integration of **Spring Boot**.
- Experience in working with messaging systems like **Kafka, Kafka event Sourcing**.
- Experienced on Managing the local deployments in **Kubernetes** and creating local cluster and deploying application containers.
- Experience with **Java 17** features like Lambda expressions, Streams, filters, pipelines, Optional Interfaces, etc.
- Experience **Java 11/8** features such as **Lambda expressions, Functional Interfaces, Streams to avoid boilerplate code**, keep code simple and extensively used **core java** technologies such as Collections, Multithreading, and Exception Handling.
- Hands on experience in configuration and deployment of multi-tier applications using servers like **WebSphere, Web Logic, Tomcat and JBoss**.
- Experience with **JUnit** tests for every single piece of functionality before actually writing the functionality.
- Experience working in and building Continuous Integration (CI) and Continuous Deployment (CD) by building custom build and deployments jobs in **Jenkins**.
- Experience in deploying and managing cloud-based applications on **Google Cloud Platform (GCP)** using services like Compute Engine, Cloud SQL, and Cloud Storage, resulting to increase in scalability and reduced downtime.
- Experience in Implementing data processing workflows using Dataflow for real-time and batch data analysis, enabling scalable and efficient data processing pipelines.
- Experience in developing Web services using **SOAP, RESTful, Axis, WSDL, WS Security, XMLRPC and JAXB/JAXP**.
- Experience on **RDBMS** such as **Microsoft SQL Server, ORACLE, MySQL, PostgreSQL, Aurora and DB2** and **NoSQL** databases such as **MongoDB, Cassandra, DynamoDB**.
- Experience in developing project (SDLC) in **Agile** and **Waterfall** methodology.
- Exceptional ability to quickly master new concepts and a proactive team player with good analytical and ability to perform at a high level, meet deadlines, adaptable to ever changing priorities.

Education Details:

UNIVERSITY OF NEW HAVEN

-3.4 GPA

Master's degree in computer science

BAPATLA WOMENS ENGINEERING COLLEGE

-8.5 GPA

Bachelors Technology in Computer Science & Technology

Technical Skills:

Languages	Java 17/11/8, PL/SQL, SQL
Java/J2EE Technologies	Core Java, JSP, JMS, Java Beans, EJB, Tiles, Design Patterns, RabbitMQ, ActiveMQ.
Frameworks	Spring, Hibernate, Spring Boot.
Web Technologies	HTML5, XML, DOM, JSON, CSS3, JavaScript, JQuery, AJAX, Angular 17/10, Angular.JS, React.JS, REDUX, React Native
Web Services/Cloud	SOAP, REST, AWS, GCP
Design & GUI Tools	Eclipse, IBM RAD
App servers	IBM Web Sphere, Apache Tomcat, BEA Web Logic, Jboss
Version Controls	SVN, CVS, GitHub
Databases/Tools	Oracle, SQL Server, My-SQL
Methodologies	Agile, Waterfall
Operating Systems	Windows, Linux, UNIX

Professional Experience:**Client:** Delta Airlines, Atlanta, Georgia**Feb 2024 to Till Date****Role:** Full Stack Developer**Responsibilities:**

- Involved in complete **software development life cycle (SDLC)** management using UML (Unified Modeling Language) - Requirements gathering, Conceptual design, Analysis, Detailed design, and Development.
- Leveraged **Java 17** features, including lambda expressions, to facilitate seamless communication within the business layer and optimize database operations.
- Implemented **Java 17** features like Lambda expressions, Streams, filters, pipelines, Optional Interfaces, etc.
- Developed and implemented Business Requirements using **Spring MVC** framework. Implemented cross-cutting concerns such as logging, authentication and system performance using **Spring AOP**.
- Developed web based application using **spring framework** for **MVC** architecture.
- Designed and developed the **REST** based **Micro services** using the **Spring Boot**.
- Used **Microservices** architecture, with **Spring Boot**-based services interacting through a combination of **REST** and **Spring Boot**.
- Deployed **Spring Boot** based **Micro-Services** in **Docker container** by using **AWS** admin console.
- Developed scalable and high-performance backend services using **Golang**, leveraging its concurrency model with **goroutines** and **channels**.
- Used **Spring Boot** with **ORM Framework (Hibernate)** to do CRUD operations with Database.
- Designed several persistent classes and involved in designing and creating generic DAOs for the domain model by using of **Hibernate 4.x** with **JPA** annotation.
- Developed application using Web Services for data access from legacy applications and integrated with new **GUI** developed using **HTML5, XML, React.JS, JSTL, Bootstrap, Spring Framework and AJAX**.
- Implemented client-side Interface using **React.JS**.
- Build user interfaces differently by breaking them into components using **React.JS** and used a real, full featured programming language to render views, with **React.JS**.
- Created the responsive UI components using **React/Redux** and to dispatch events to the store.
- Developed **Spring JMS** Message listeners to process messages asynchronously between new services and legacy services.
- Designed configuration **XML Schema** for the application and used **JavaScript** for the client side validation.
- Used **AWS** deployment services to quickly set up a dynamic website and configure virtual serves using **AWS EC2** and responsible for maintaining and expanding our **AWS infrastructure** using **AWS EC2/EBS**.
- Used **Docker** for possible to production to the development environment to fast possible for interactive use.

- Scheduled, deployed and managed container replicas onto a node cluster using **Kubernetes**.
- Developed mock data generation feature that is integrated with **GraphiQL** IDE interface to allow users to send queries against their custom generated schema and render mock results in order to familiarize users to the **GraphQL** syntax.
- Used **Kafka** as a messaging framework for communications using queues between micro-services.
- **GIT** is used for version control of the code.
- Developed **EJB MDB's** and message Queue's using **JMS** technology. **EJB** Session Beans were used to process requests from the user interface.
- **Log4j** is used for logging purposes and debug levels are defined for controlling what we log.
- Worked on **JUnit** for creating test cases for all the Business Rules and the application code.
- Developed strategies and tools to create an efficient automated integration and release process using **Jenkins**.
- Constructed **REST** and **SOAP** web service work as an interface to collect verification information from external system like user data using **JAX-RS**.
- Performed CRUD operations like Update, Insert and Delete data in **NoSQL** database like **MongoDB**.
- Wrote complex business logic using **PL/SQL** Packages, stored procs and **SQL queries**.
- Followed **Agile** process throughout development lifecycle and developed the application as per the coding standards.
- Designed and deployed microservices using **Google Cloud Platform (GCP)** services like Compute Engine and Cloud Storage, improving system scalability.
- Deployed applications in **Kubernetes Engine (GKE)** for better orchestration and containerized microservices using Docker.
- Optimized data processing pipelines using **Big Query** for large-scale analytics, reducing query processing time .
- Implemented Cloud Pub/Sub for real-time messaging between services, ensuring smooth communication across distributed systems.
- Involved in design discussions and understanding of business requirements and identify the relevant functional and technical requirements.

Environment: Java 17, spring, Spring Boot, MVC, Micro Services, Hibernate, Eclipse, XML, JMS, HTML5, CSS3, JavaScript, React.JS, REDUX, AWS, GCP, Docker, Kubernetes, GraphQL, Kafka, EJB, Log4j, JUnit, Jenkins, SOAP, REST, MongoDB, SQL, NoSQL, PL/SQL, Agile and Windows.

Client: Comcast, Philadelphia, PA

Jan 2023 – Feb 2024

Role: Full Stack Developer

Responsibilities:

- Involved in most of the phases of Software Development Life Cycle including requirement, analysis, design, development, testing, release of the project and support.
- Developed the Application making use of **Java 11's** new **Streams API** and **parallel Streams** to partition the streams.
- Configuring **Java 11** objects with backend database tables using ORM mapping in Hibernate 5.4 end to end application on spring boot framework (Rest Api Application/Spring JP Using Crud repository).
- Spring framework and MVC design patterns used to complete several projects with primarily focused on more complex areas of development including user interface design, batch processing, stored procedure development, **XML**, data exchange and integration.
- Validated all forms using **spring validation framework**.
- Building a **Micro services** architecture with **Spring Boot** and **Docker**.
- Involved in building cloud Micro services and implemented back-end using **Spring Boot**.
- Involved in development of cloud hosted web applications and **REST APIs** using **Spring Boot** with embedded **Tomcat**.
- Worked with Micro service architecture using **Spring Boot** to modularized code and implemented **Rest API's** using **Spring Rest**.
- Implemented persistence layer using various features of **Hibernate framework** like **HQL queries**, **Criteria** etc. Created connections to database using **Hibernate Session Factory**, using **Hibernate APIs** to retrieve and store images to the database with **Hibernate transaction control**.
- Involved in designing, developing and testing the web application by using the **HTML5**, **CSS3**, **Bootstrap**, and **React.JS**.
- Used **React.js** for developing generic components like, customize DataGrid, navbars, form components.
- Worked in using **React JS** components, Forms, Events, Keys, Router, Animations and Flux concept.

- Implemented client-side Interface using **React.JS** and used various predefined components from **NPM (Node Package Manager)** and **Redux library**.
- Implemented client side Interface using **Node.JS** and Used for creating reusable UI components.
- Independently integrate multiple APIs and new features using **React + GraphQL** stack.
- Maintained and expanded **AWS (Cloud Services)** infrastructure using **AWS Stack**, defined AWS Security Groups which acted as virtual firewalls that controlled the traffic allowed reaching one or more AWS EC2 instances
- Worked on **Docker hub**, creating **Docker images** and handling multiple images primarily for middleware installations and domain configurations.
- Edited the **Kubernetes** deployment. yaml, service.yaml files to deploy and orchestrate the application on **Kubernetes**.
- Used **Spring Kafka API** calls to process the messages on Kafka Cluster setup.
- Developed Java **classes** for implementing Business logics using **EJB (Stateless session, entity, message driven beans)**.
- Used **Log4J** for extensible logging, debugging and error tracing.
- Performed unit testing using **JUNIT** framework and used **spring** Test Cases for testing Action Classes.
- Created a **Jenkins** job to deploy confidential module to UAT from different **GIT** branches.
- Involved in developing and consuming web services like **SOAP (JAX-WS), REST (JAX-RS)**. Generated **REST (JAX-RS)** based web services using Server Oriented Architecture. Implemented text messaging by using **JAX-RS RESTful API**.
- Worked with **NoSQL** document-based data stores like **MongoDB** and also designed various data models for the system.
- Migrated on-premise applications to GCP cloud infrastructure, utilizing **Cloud SQL and Cloud Storage** to ensure data integrity and high availability during the migration process.
- Developed and deployed containerized microservices using **Google Kubernetes Engine (GKE)** and **Docker**, enabling a faster, scalable, and secure cloud-native infrastructure.
- Designed and Developed Stored Procedures, Triggers in Oracle to cater the needs for the entire application. Developed complex **SQL queries** for extracting data from the database.
- Implemented the project under **Agile** Project Management Environment and followed SCRUM iterative incremental model & configured various sprints to execute.
- Actively participated and provided feedback in a constructive and insightful manner during weekly Iterative review meetings to track the progress for each iterative cycle and figure out the issues.

Environment: Java 11, spring, MVC, Spring Boot, Micro Services, REST, Hibernate, HTML5, CSS3, JavaScript, React.JS, REDUX, Node.JS, AWS, Docker, Kubernetes, GraphQL, Kafka, JMS, XML, EJB, Log4j, JUnit, Jenkins, SOAP, RESTful, MongoDB, SQL, PL/SQL, Agile and Windows.

Client: Rogers, Hyderabad

Sep 2021-Aug 2022

Role: Full Stack Developer

Responsibilities:

- Involved in complete software development life cycle with object oriented approach of clients business process and continuous client feedback.
- Used **Java 8** lambda expressions and predicate functionalities as part of developing the Application. Method references are used provided in **Java 8** to make use of methods already named.
- Developed using new features of **Java 1.8 Annotations, Generics, and Lambda Expressions** enhanced for **loop and Enums**.
- Implemented **spring and J2EE** based **MVC (Model-View-Controller)** framework for the application.
- Used **Spring MVC** to develop **REST** web services within the application
- Used **Spring MVC** Interceptors, spring core modules and native Spring AOP facets of Logging and transactional management.
- Used **Spring Boot** to develop a documents module of Confidential which deals with operations on Documents.
- Used **Spring Boot** to develop a module that deals with project workflows.
- Crated API's using **Spring Boot**.
- Used **Hibernate** as an **ORM Framework** for productive application development by reducing development time, complexities and increase flexibility.
- Involved in developing the **UI** pages using **HTML5, DHTML, CSS3, JavaScript, JSON, JQuery, Angular.JS and Ajax**.
- Worked in designing and implementation of Micro service based applications using **Angular 10**.

- Used **Angular 10** to create custom components for data manipulations and to display data in company standard format.
- Used Angular two-way binding and Implemented the search functionality for Internal Application using **Angular.JS**.
- Used **Node.JS** for the communication to the server through Restful API and added user validations and permissions by using it.
- Worked on **kubernetes** Helm charts working with infra team for deployment and support of application.
- Created **Docker** images for scheduler, database, liquidbase and wrote scripts to start /stop containers for running Robot Test automation on Jenkins as per **ONAP** CSIT (continuous system integration testing) procedures.
- Using **Kafka** for Publish/Subscribe pattern in application dealing with messaging.
- Designed and deployed microservices using **Google Cloud Platform (GCP)** services like Compute Engine and Cloud Storage, improving system scalability
- Developed the application using Java Beans and **EJB's**.
- Implemented logging for the whole application using **Log4j**.
- Performed unit testing using **JUnit** and participated in integration testing.
- Designed database and created tables, written the complex **SQL** Queries and stored procedures as per the requirements.
- Implemented the project under **Agile** Project Management Environment and followed SCRUM iterative incremental model and configured various sprints to execute.
- Actively involved in **Function Point Analysis (FPA)** meetings with business team to analyze resource requirement.

Environment: Java 8, spring, Spring Boot, MVC, Micro Services, Hibernate, HTML5, CSS3, JavaScript, Eclipse, Angular 10, Angular.js, AWS, Node.JS, XML, JMS, EJB, Log4j, JUnit, SOAP, REST, SQL, Agile and Windows.

Client: Cellarch Technologies Pvt. Ltd., Bangalore India

Sep 2019 – Sep 2021

Role: Java Developer

Responsibilities:

- Involved in Requirement gathering, Conceptual Design, Analysis, Detailed Design, Development and Testing of the application.
- Used **Spring MVC** design framework for implementing the application.
- Implemented **Model View Controller (MVC)** architecture and developed Form classes, Action Classes for the entire application using **spring Framework** and used for server side validation.
- Developed the Application using **Spring MVC** Framework by implementing **Controller, Service classes**.
- Used **Hibernate ORM** to automate the mapping between SQL databases and objects in **Java**.
- Created **Hibernate** mapping files to map with the **data base tables** and Java **objects**.
- Used **Eclipse IDE** as development environment to design, develop and deploy **spring** components on **Web Logic**.
- Used **Core Java** concepts like Collections, Multithreading to seamlessly provide the service to multiple users.
- Developed various **DAOs** for handling business logic and data manipulations from database.
- Created **XML** files and applied **XSL** to enable users to access the system. **JAXP API** was used in processing XML files with **DOM** and **SAX** parsers.
- Implemented **Service Oriented Architecture (SOA)** using **JMS** for sending and receiving messages while creating web services.
- Used **Web services (SOAP)** for transmission of large blocks of **XML data over HTTP**.
- Work with **SQL queries** to store the data in **MS SQL Server**.
- Actively participated in **daily SCRUM meetings** to produce quality deliverables within time.

Environment: Java, spring, MVC, Hibernate, XML, JMS, Eclipse, DAO, DOM, SOAP, SQL, Agile and Windows.
