

RAMYA TENELA

Python Full-stack Developer

480 788 8760 | ramyaa.tenela@gmail.com | [LinkedIn](#)

SUMMARY:

Senior Python full stack developer with nearly **6 years of experience** in designing, developing, and deploying scalable applications using **Python, Django, Flask, FastAPI**, and **microservices architecture**. Strong expertise in building **RESTful APIs, GraphQL services**, and full-stack applications using **ReactJS, AngularJS, HTML, CSS, JavaScript**, and modern UI frameworks. Experienced in working with **AWS cloud services** (EC2, S3, RDS, Lambda, CloudWatch, API Gateway), **Docker, Kubernetes, and CI/CD pipelines** using Jenkins, GitHub Actions, and GitLab. Skilled in **database development** across **PostgreSQL, MySQL, MongoDB, Cassandra, DynamoDB, and Redis** with strong SQL/NoSQL knowledge. Hands-on experience in **big data technologies** (Hadoop, Hive, Spark, MapReduce), **automation** using Python & Shell scripting, and **DevOps tools** like Terraform, Ansible, and Jenkins. Proficient in **unit testing** using PyTest, UnitTest, Nose, and Robot Framework. Successfully built modern frontends, optimized microservices, created dashboards, automated workflows, and implemented ML features such as **chatbots and text analytics**. Strong understanding of **Agile/Scrum**, clean coding practices, and end-to-end project delivery.

TECHNICAL SKILLS:

Programming Languages:	Python, C, C++, Shell scripting, SQL
Web Frameworks:	Django, Flask, FastAPI, Pyramid, CherryPy, Bottle
Frontend Technologies:	ReactJS, AngularJS, HTML5, CSS3, JavaScript, jQuery, Bootstrap, Chart.js
Databases:	PostgreSQL, MySQL, MongoDB, Cassandra, DynamoDB, Oracle
Cloud Platforms:	AWS (EC2, S3, RDS, Lambda, CloudWatch, API Gateway, SQS, SNS, CloudFormation, CloudFront, ELB), Google Cloud Platform (GCP)
Microservices & Tools:	Docker, Kubernetes, API Gateway (AWS/Kong/Nginx), RabbitMQ, Kafka, Redis
Big Data & ETL:	Hadoop, Hive, Spark (Scala/Python), MapReduce, Airflow, Informatica PowerCenter, ETL pipelines
DevOps & CI/CD:	Jenkins, GitHub Actions, GitLab CI/CD, Ansible, Terraform
Version Control:	Git, GitHub, GitLab, TFS
Testing Frameworks:	PyTest, UnitTest, Robot Framework, Jest
Automation & Scripting:	Bash, Python scripting
Visualization & UI Tools:	Streamlit, D3.js, Material UI, Tailwind CSS
Servers & Web Technologies:	Apache, Nginx, Tomcat, RESTful APIs, GraphQL, WebSockets

PROFESSIONAL EXPERIENCE:

Client: Cigna Healthcare

Feb 2024 – Present

Role: Python Developer

Responsibilities:

- Designed the front end and backend of the admin application using Python on Django Web Framework.
- Developed web applications and RESTful web services/APIs using Python, Flask, and Django.
- Created efficient and responsive UI designs using HTML5, CSS3, Chart.js, JavaScript, MEAN stack (MongoDB, Express, Angular, Node.js), and ReactJS.
- Implemented RESTful APIs and GraphQL services for seamless communication between microservices.
- Worked with ReactJS components, forms, events, keys, routers, animations, and Flux concepts.
- Integrated React frontend with RESTful APIs and GraphQL services to ensure seamless interaction with Python-based microservices.
- Developed and implemented chatbots and virtual assistants using Python and machine learning algorithms.

- Developed Spark applications in Scala and Python for regular expression (regex) projects in the Hadoop/Hive environment on Linux/Windows for big data resources.
- Developed the backend of applications using the Flask framework.
- Designed and implemented an automation framework using Python and Shell scripting.
- Integrated microservices with message brokers such as RabbitMQ, Apache Kafka, and Redis for asynchronous processing.
- Developed views and templates using Python and FastAPI templating language to create a user-friendly website interface.
- Created Python scripts to automate AWS services, including web servers, ELB, CloudFront distribution, databases, EC2, security groups, S3 buckets, and application configuration.
- Implemented Continuous Integration (CI) and Continuous Delivery (CD) processes using Jenkins along with Python and Shell scripts to automate daily routine jobs.
- Automated AWS EC2/VPC/S3/SQS/SNS resources using Terraform, Ansible, Python, and Bash scripts, adopting new AWS features including ELB and EBS.
- Added support for hosting static/media files on AWS S3 and managing databases on AWS RDS.
- Designed and developed the user interface using HTML, CSS, Bootstrap, AJAX, JSON, JavaScript, and AngularJS, collaborating with the UI team to ensure visual quality and performance.
- Designed and managed API Gateway solutions using AWS API Gateway, Kong, or Nginx to route and secure microservices.

Client: Accenture

Nov 2021 - July 2023

Role: Python Developer

Responsibilities:

- Designed and implemented backend applications and APIs using Python (Django, Flask, Pyramid, FastAPI), enabling interactive and scalable web solutions.
- Developed frontend applications using ReactJS (Flux architecture), AngularJS, Ember.js, Backbone.js, HTML5, CSS3, JavaScript, Bootstrap, and Chart.js, delivering responsive and user-friendly interfaces.
- Integrated React frontend with RESTful APIs and GraphQL services, ensuring seamless communication with Python-based microservices.
- Built and maintained real-time, event-driven applications using WebSockets, Socket.IO, and FastAPI.
- Worked on Big Data and ETL pipelines, including Spark (Python/Scala), Hadoop, Hive, MapReduce, Airflow, Ab Initio, and Informatica PowerCenter, processing large datasets and optimizing workflows.
- Developed and maintained databases using PostgreSQL, MySQL, MongoDB, Cassandra, DynamoDB, and Redis; performed CRUD operations and data modeling for scalable applications.
- Automated infrastructure and deployments on AWS (EC2, S3, RDS, DynamoDB, ELB, Auto Scaling, CloudFront, CloudFormation, Lambda, VPC, IAM, SQS/SNS, ElastiCache, Route53, Beanstalk, EMR) and Google Cloud Platform, ensuring high availability, fault tolerance, and auto-scaling.
- Implemented CI/CD pipelines using Jenkins, GitHub Actions, GitLab CI/CD, and TFS, automating deployment, testing, and monitoring of Python and React applications.
- Created automation scripts and workflows using Python, Bash, Ansible, and AWS CloudFormation templates to streamline cloud operations.
- Ensured observability and monitoring of microservices using Prometheus, Grafana, ELK stack, and OpenTelemetry.
- Applied OOP principles, unit testing, integration testing, and frontend testing using PyTest, Robot Framework, Jest, and React Testing Library to maintain high code quality.
- Designed dashboards and visualizations for data-driven insights using Python, D3.js, Streamlit, and Chart.js.
- Developed chatbots and ML solutions for text analytics and automation projects using Python and Spark.
- Performed code reviews, best-practice enforcement, and collaborated with UI/UX teams to ensure consistency and maintainability across applications.

Client: Think Ai Labs LLC

Sep 2019 - Oct 2021

Role: Python Developer

Responsibilities:

- Built database Models, Views, and APIs using Python for interactive web-based solutions.
- Designed, configured, and optimized databases and backend applications using SQL (PostgreSQL, MySQL) and NoSQL (MongoDB, DynamoDB).
- Generated Django forms and implemented backend logic to manage online users and analytics data.
- Developed RESTful web services and APIs using Django and Flask, ensuring scalability, security, and maintainability.
- Deployed full stack React + Python applications on AWS (S3, Lambda, EC2), Google Cloud, and Docker/Kubernetes environments.
- Automated CI/CD pipelines for microservices deployment using Jenkins, GitHub Actions, or GitLab CI/CD.
- Wrote test cases, performed unit testing, root cause analysis, and defect fixing to ensure code reliability and smooth delivery.
- Supported User Acceptance Testing (UAT), addressing stakeholder feedback and resolving issues.
- Managed large datasets and performed database operations using Pandas data frames and MySQL.
- Wrote and executed complex SQL queries and PL/SQL scripts on Oracle databases; handled data exchanges with MongoDB.
- Integrated third-party APIs and libraries such as Stripe for payments, Firebase for real-time data, and D3.js for data visualization.
- Created Git repositories, maintained version control, and ensured code quality using best practices.
- Developed cluster health reporting and forecasting for MarkLogic distributed NoSQL databases.
- Migrated legacy frontend applications to modern React frameworks, improving performance, maintainability, and user experience.

EDUCATION:

- Bachelor of Technology, Computer Science
- Master of Science, Information Technology
