Education

Master of Science in Computer Science | Georgia State University | CGPA: 3.8/4 August 2024 – December 2025

Coursework: Web Development, Machine Learning, Computational Intelligence, Natural Language Processing

Bachelor in Computer Science | Jawaharlal Nehru Technological University | CGPA: 3.8/4 July 2019 – May 2022

Coursework: Database Management, Operating Systems, Design and Analysis of Algorithms, Data Structures

Work Experience

Georgia State University | Graduate Assistant | Atlanta, US January 2025 - Present

Technologies: **Java, Data Structures & Algorithms, Personality Development**

- Taught **15+** lectures and **20+** lab sessions on Algorithms and Data Structures to **100+** students, simplifying complex concepts and guiding them through assignments.
- Mentored students on coursework and soft skills while grading **500+** assignments, leading to a **15%** rise in average scores.

Skillz | Software Engineering Co-op | Nevada, US June 2025 – August 2025

Technologies: **React Native, Redux, Spring Boot, MySQL, GitHub, Postman, Redis**

- Designed and launched configurable entry limits for live game events (free or video-ad based) across iOS, Android, and Web, driving **26K+** additional player entries.
- Deployed backend APIs with caching, achieving **200ms** ad load latency and enabling seamless transitions to cash entries.
- Created a live events form for developers with configurable UI and backend integration, reducing setup time by **30%** and driving a **10%** increase in monetized events.

Verizon | Eng - II Software Development | Hyderabad, India July 2022 – August 2024

Technologies: **Spring Boot, Spring Reactive, React, TypeScript, JavaScript, Java, Kafka, MySQL, Kibana, REST APIs**

- Established real-time connectivity between EPC (wireless telecom product repository) and Common Catalog (wireline & wireless product repository) using Kafka, achieving **99%** message delivery accuracy.
- Directed the architecture and development of a full-stack Order Logging system with backend querying and a UI for filtered log retrieval, eradicating manual Kibana checks and saving **~4 hours** per debugging session.
- Delivered a drag-and-drop web framework with reusable UI components, empowering non-technical users to create HTML front-end web pages and decreasing coding time by **70%**.
- Migrated CPE product data from Premisys to Primex, minimizing processing time from **4 days to 1 hour**.

Arcesium | Software Reliability Engineer Intern | Hyderabad, India February 2022 – June 2022

Technologies: **GitLab, CI/CD, Python, Cerberus, Docker, YAML**

- Initiated and built CI/CD pipelines in GitLab with Cerberus validation scripts, automating detection of cycles, dependency issues, and format errors, eliminated manual merge reviews and saved **~10 hours** per week.
- Containerized Python scripts with Docker, simplifying setup time from **2.6 hours to 1 hour** and ensuring consistent execution.

Honeywell | Software Engineer Intern | Hyderabad, India April 2021 – June 2021

- Refactored legacy components and added cross-browser support in the BMS application, cutting browser-specific issues by **40%** and enabling seamless use on Chrome and IE.
- Reviewed peer merge requests, provided feedback to restructure code quality, and decrease post-merge defects by **~20%**.

Skills

Programming Languages: C, C++, Java, Python, JavaScript

Web Development: HTML, CSS, React JS, Angular, TypeScript, Spring Boot, Spring Reactive, REST APIs, MySQL, MongoDB

Frameworks & Tools: Docker, CI/CD, Git, Jenkins, Jira, Postman, Power BI, Tableau, Excel

Machine Learning: Matplotlib, Scikit-learn, TensorFlow, Keras, PyTorch, OpenCV, LLM, RAG, Transformers, Neural Networks

Additional Skills: Unix/Linux, Android Development, Microservices, Kafka, AWS S3, SDLC

Projects

AskDB – Natural Language to SQL Query (*Skills: Python, RAG, FAISS, LLM, SQL, Gemini API*) January 2025 – May 2025

- Implemented an AI platform that converts natural language into SQL queries using FAISS-based semantic search, RAG, and Gemini API LLMs, reducing manual SQL effort by **90%** and accelerating data-driven decision-making.

Job Portal Website Development (*Skills: React JS, Spring Boot, MySQL*) August 2024 – December 2024

- Engineered a full-stack job portal with job postings, auto-updating listings, candidate profiles, and filtering, optimizing API response times to **250ms**, improving database performance, and ensuring scalability.

Awards & Recognition

Spotlight Award – Verizon (2024): Recognized for outstanding contribution in developing a drag-and-drop framework.

Leadership Rating – Verizon (2023): Earned top 5-star leadership rating for impact and collaboration within engineering teams.
