

PROFESSIONAL SUMMARY

A highly experienced IT professional with over 17 years in information technology, specializing in Business Analysis, Functional testing, UAT Coordination, Performance engineering and Site reliability activities. Skilled in both waterfall and agile development models, with a strong focus on business requirement gathering, process analysis, stakeholder communication & documentation, functional testing, performance engineering and site reliability, UAT coordination. Proficient in using tools like Jira, Azure DevOps, Confluence, Bitbucket, load generation software, AI software, MS office suite.

Key expertise includes:

- Business Requirements Gathering & Documentation
- Process Modeling & Improvement
- Stakeholder Communication & Management
- Use Case & User Story Development
- Demonstrated strong leadership, communication, and technical expertise in the software testing lifecycle and process improvements.
- Developing and executing manual testing, data migration and performance engineering strategies, including load, stress and failover testing.
- Conducting end-to-end application monitoring for various servers and services.
- Managing testing activities, collaborating with teams to define strategies, create test cases, and track metrics.
- Leading and mentoring test teams, overseeing the development and execution of test plans, and ensuring compliance with testing standards.
- Collaborating with stakeholders (developers, product owners, business analysts) to ensure requirements are met and defects are resolved.
- Managing UAT processes and ensuring reliable assessments of software readiness.
- Providing training and guidance to testers, and coordinating efforts for system release validation and defect resolution.
- Experienced in database testing, API/integration testing, and performance engineering

WORK HISTORY

Business Analyst • *LTIMindtree/Marsh & McLennan*

Hoboken, NJ • September 2024 to Current

Marsh & McLennan is a global professional services firm with business in Insurance brokerage, Risk Management, Investment Advisory and management consulting

- Collaborate with stakeholders to gather, analyze, and document business requirements for various projects.
- Translate business needs into detailed functional specifications and user stories for development teams.
- Conduct process analysis and identify opportunities for process improvements and automation.
- Facilitate communication between business units and technical teams to ensure clear understanding of project scope and deliverables.
- Support the testing phase by creating test cases based on requirements and participating in UAT (User Acceptance Testing).
- Assist in prioritizing backlog items and ensuring timely delivery of features aligned with

business goals.

- Conduct gap analysis to identify discrepancies between current and future state processes.
- Use tools like JIRA and Confluence to manage requirements, track progress, and document project artifacts.
- Provide ongoing support and clarification during project implementation and post-deployment.

Quality Assurance Test Lead • *LTIMindtree/Marsh & McLennan*

Hoboken, NJ • September 2021 to August 2024

Marsh & McLennan is a global professional services firm with business in Insurance brokerage, Risk Management, Investment Advisory and management consulting

- Streamlined testing processes for increased efficiency and reduced overall test cycle time.
- Conducted integration and regression testing of existing products.
- Enhanced product performance with thorough troubleshooting and identification of critical defects.
- Reduced defect leakage rate by conducting thorough root cause analyses and proactively addressing areas of concern in future release cycles.
- Improved software quality by designing and implementing comprehensive test strategies and plans.
- Participated and conducted data migration testing for various key systems
- Collaborated with developers to ensure timely resolution of identified issues, resulting in improved customer satisfaction.
- Established regular communication channels between onsite and offshore team members, ensuring seamless coordination despite geographical barriers.
- Managed cross-functional teams, providing guidance and supervision to junior testers and ensuring proper adherence to best practices.
- Created testing scenarios for long-term and expedited development schedules.
- Worked with supervisors to improve testing capabilities and methodologies to enhance efficiency and effectiveness
- Generate management reports for release readiness, defect density, test coverage
- Cultivated a culture of continuous improvement within the team by regularly soliciting feedback from peers and incorporating lessons learned into future work efforts.
- Documented diagnostic findings in reports to inform stakeholders of product performance.
- Assessed software bugs and compiled findings along with suggested resolutions for development team members.
- Stress tested new releases/program increments.
- Developed and maintained defect databases for known issues

IT Technology Senior Consultant • *Experis/Bank of America Merrill Lynch*

Jersey City, NJ • November 2020 to August 2021

Bank of America Merrill Lynch is the global banking and global markets businesses of Bank of America Corporation, offering wealth management, investment banking, and brokerage service. The testing involved validation of changes to the messaging between the upstream trading applications & the middle office booking systems.

- Conducted regression testing of existing products.
- Enhanced product performance with thorough troubleshooting and identification of critical defects.
- Improved software quality by designing and implementing comprehensive test

strategies and plans.

- Collaborated with developers to ensure timely resolution of identified issues, resulting in improved customer satisfaction.
- Created testing scenarios for long-term and expedited development schedules.
- Documented diagnostic findings in reports to inform stakeholders of product performance.
- Assessed software bugs and compiled findings along with suggested resolutions for development team members.
- Stress tested security fixes and patches

Quality Assurance Test Lead • *LTIMindtree/Marsh & McLennan*

Hoboken • October 2017 to November 2020

Marsh & McLennan is a global professional services firm with business in Insurance brokerage, Risk Management, Investment Advisory and management consulting

- Evaluated emerging technologies and industry trends to maintain competitive edge in performance testing practices.
- Collaborated with development teams to ensure seamless integration of performance testing into the software development lifecycle.
- Developed comprehensive test plans that outlined objectives, schedules, and resource allocation for successful project completion.
- Analyze data gathered from performance test runs, provide sound recommendations for performance improvements, and identify bottlenecks of applications
- Provide tools and frameworks to engineering teams to benchmark and measure performance of the products during the development life cycle
- Reduced software defects by implementing robust test strategies and methodologies.
- Support Performance Manager in upward stakeholder management, status report development, metrics
- Setup entire workflow in JIRA as per the requirement for the performance team and production support team
- Worked on Docker implementation for tools like ELK, Prometheus / Grafana
- Delivered accurate reports on test findings, enabling stakeholders to make informed decisions about system enhancements or modifications.
- Incorporated delivery requirements into planning of testing schedules.
- Implemented Real user monitoring using open source JS libraries like Boomerang with Splunk
- Improved application performance by conducting thorough performance testing and identifying bottlenecks.
- Implemented Sauce lab tool in the team – this was used for cross browser testing and also for RUM monitoring
- Mitigated risks related to system performance by proactively identifying potential issues during the testing phase.
- Enhanced system scalability through rigorous load and stress testing for optimal user experience.
- Implemented Datadog and CA APM Monitoring setup for new technology - Node.js, Springboot
- Established strong working relationships with cross-functional teams to foster collaboration in achieving common goals.
- Power user of Splunk tool and implemented various dashboards/alerts for Product owners or Application support team to watch the real time production usage, issues

- Facilitated knowledge transfer among team members through mentoring, training sessions, and documentation of best practices.
- Played a pivotal role in driving continuous improvement initiatives within the organization's performance testing function

Sr Quality Assurance Consultant • J. CREW

New York • September 2015 to October 2017

J.CREW is an American multi-brand, multi-channel, specialty retailer. The company offers an assortment of women's, men's and children's apparel and accessories

- Analyze Business Requirements and provide test strategy and estimation
- Lead a Performance testing team of 3 members
- Identify Non-functional testing required based on business requirement
- Developed Load Runner test scripts according to test requirements using Web (HTTP/HTML) protocol
- Analysis of production site traffic using Analytics tool (Omniture) and identified business critical transactions and work load model for performance testing
- Compare and analyze actual to expected results and report the deviation in performance statistics to application teams, and provide recommendations on how and where performance can be improved
- Conducted Non-functional tests like Load, Endurance, Stress and Application Fail-over
- Identified and categorized Monitoring Parameters to verify performance requirements
- Identified resource utilization using Splunk
- Prepare performance test analysis reports based on the observations
- Conducted multiple trainings for the team to explain performance testing process
- Helped team members in execution of projects and to resolve issues

Performance Test Lead • Cognizant Technology Solutions/ Lloyd's Bank

Pune • June 2010 to March 2013

Post-merger of two banks, Lloyds and HBOS; many of their applications were integrated and required Non-functional testing which covers Performance testing, Security testing and Failover Testing. These applications spans across various areas like Retail banking, Private Banking, Investments Banking and Insurance

- Lead a Performance testing team of 15 members
- Responsible to manage project planning & execution, risk and issue mitigation, change order
- Successfully delivered projects as per the Client requirements within planned cost and time
- Analyze Business Requirements and provide cost estimations and test strategy
- Conducted regular project meetings with all stakeholders
- Responsible for responding all RFQs and identify Non-functional testing based on business requirements
- Worked closely for non-functional testing in Lloyds-HBOS Integration
- Identify Non-functional testing required based on business requirement
- Prepare Master Test plan for all non-functional testing involved in the Integration applications
- Developed performance Test Plan & Test cases for the application to define the performance testing scope
- Conducted Non-functional tests like Load, Endurance, Stress and Application Fail-over

- Identified and categorized Monitoring Parameters to verify performance requirements
- Prepare NFT test analysis reports based on the observations
- Responsible for Resource management and project management activities
- Conducted multiple trainings for the team to explain Non-functional testing process
- Helped team members in execution NFT projects and to resolve issues

Consultant • *Oracle Financial/National Bank of Australia*

Bangalore • February 2010 to April 2010

National Bank of Australia selected Oracle Banking Platform Oracle Flexcube product in order to increase customer and banking experience on which Manual & Performance testing was carried out

- Analyzed Business Requirements and developed Functional & Performance test Strategy for benchmarking new application
- Developed Functional & Performance Test Plan/ Test cases for the application to define the testing scope
- Create different scripts as per the requirement
- Designed Scenarios for test execution to ensure the functionality meets the requirements
- Designed Scenarios for test execution to ensure performance meets or exceeds previous performance benchmarks
- Identified and categorized Monitoring Parameters to verify performance requirements

Lead Functional & Performance Test Engineer • *HSBC Global Technology India Pvt LTD.*

Pune • June 2004 to December 2009

HSBC GLT is part of HSBC Bank, headquartered in London, United Kingdom. The objective of GLT is to design, develop and implement core mission critical banking, financial services and Insurance applications for HSBC Bank

- Lead a Functional & Performance testing team of 7 members
- Developed Project Test Plan, based on requirements and design documents
- Carry out detailed requirements analysis for Functional & Performance testing
- Successfully develop and managed strong relationship with the client
- Prepare and maintain performance test-ware (transaction scenarios, coordinate test data preparation)
- Ensure mapping between requirements and transaction scenarios
- Conduct/Attend functional & performance test-ware walk-through sessions
- Acceptance, Bottleneck identification and regression testing
- Conducted knowledge transfer sessions to new team members

EDUCATION

Bachelor of Engineering - Electrical Engineering • *Rajiv Gandhi Proudhyogiki Vishwavidyalaya*
Indore, India • June 2000 to April 2004

SKILLS

- Test Execution Management
- Test Case Design
- Test Environment Setup
- User Acceptance Testing
- Endurance Testing Defect Tracking

MANAGEMENT

- Azure DevOps

TECHNICAL

- Jira
- Confluence
- Apache Tomcat
- Docker
- Core Java/J2EE/JSP Servlet
- UNIX/LINUX Operating Systems
- Oracle/MySQL

TOOLS

- LoadRunner
- JMeter
- Jenkins
- Splunk
- Datadog
- Saucelabs
- Docker
- Wily Introscope
