

RASHMIKA BHARATHA

Atlanta, GA | rashmikabharatha48@gmail.com | 404-913-5522 | [LinkedIn](#)

PROFESSIONAL SUMMARY

Java Full Stack Developer with 4+ years of experience in designing and building secure, scalable web applications across diverse domains. Proficient in backend development with Java, Spring Boot, and microservices architecture, and front-end technologies like Angular and React. Skilled in developing cloud-native and event-driven systems using Docker, Kubernetes, and AWS. Experienced with relational and NoSQL databases including MySQL, PostgreSQL, Oracle, and MongoDB. Adept at delivering high-quality software through CI/CD automation, test-driven development, and Agile methodologies. Passionate about continuous learning and solving complex technical challenges.

SKILLS

- **Languages:** Java 8/11/17, Python, JavaScript, TypeScript, SQL, PL/SQL, HTML5, CSS3
- **Frameworks:** Spring Boot, Spring MVC, Spring Security, Hibernate, JPA, Angular, React, RxJS, Node.js
- **Web Services:** RESTful APIs, SOAP, JWT, Servlets, WebSockets, JSP, OAuth2.0
- **Databases:** MySQL, Oracle, PostgreSQL, MongoDB, Redis
- **Cloud Platforms & DevOps:** AWS (EC2, Lambda, S3, ECS, EKS, API Gateway, SQS, SNS), Azure, Docker, Kubernetes, Jenkins, Terraform, Git, Maven
- **Testing Tools:** JUnit, Mockito, Postman, SonarQube
- **Event Streaming:** Apache Kafka, RabbitMQ
- **Development Practices:** Microservices Architecture, Event-Driven Architecture, CI/CD Pipelines, Test-Driven Development (TDD), Agile (Scrum)
- **Compliance & Security:** HIPAA standards, OWASP best practices, Role-Based Access Control
- **Operating Systems and Tools:** Windows, Linux, macOS, IntelliJ IDEA, Visual Studio Code, Eclipse, Putty

WORK EXPERIENCE

Role: Java Full Stack Developer

Jun 2024 - Present

Client: Optum

Location: Atlanta, Georgia

Roles and Responsibilities:

- Architected and developed a secure, scalable telemedicine backend platform using **Spring Boot (Java 17)**, **Hibernate**, and **JPA**, supporting core functionalities such as virtual consultations, scheduling, and HIPAA-compliant medical records access.
- Developed a dynamic, modular frontend using **Angular 16**, **TypeScript**, and **RxJS**, implementing reusable UI components and reactive forms to enhance user interaction and application responsiveness.
- Built robust **RESTful APIs** using Spring Boot, secured with **OAuth 2.0** and **JWT** for authentication and role-based access control (RBAC), and documented endpoints using **Swagger** for seamless integration and maintainability.
- Implemented API pagination, custom exception handling, and asynchronous processing to ensure high performance, resilience, and scalability.
- Leveraged **Java Database Connectivity (JDBC)** and **JPA Criteria API** for efficient interaction with relational databases and advanced query optimization.
- Utilized **MongoDB schemas** for managing unstructured medical records, appointment histories, and logs, with optimized schema design to support high-throughput operations.
- Delivered real-time system features such as appointment confirmations and chat/prescription alerts using **WebSockets**, improving system responsiveness and user experience.
- Integrated **Apache Kafka** for event-driven microservices communication, ensuring loose coupling and fault tolerance.
- Performed unit and integration testing using **JUnit** and **Mockito**, ensuring high code quality, early bug detection, and improved reliability across production deployments.
- Managed **CI/CD pipelines** using **Maven**, **Docker**, and **Git** to automate builds, testing, containerization, and deployments, enabling faster and reliable release cycles.
- Actively contributed in **Agile ceremonies** including sprint planning, stand-ups, and retrospectives, collaborating with cross-functional teams for timely and high-quality deliverables.

Environment: Java 17, Spring Boot, Angular 16, TypeScript, RxJS, MongoDB, Apache Kafka, Docker, OAuth 2.0 / JWT, WebSockets, Swagger, JUnit / Mockito, RESTful APIs, Git

Role: Full Stack Java Developer

Jan 2023 – May 2024

Client: Bank of America

Location: Chicago, Illinois

Roles and Responsibilities:

- Developed **Spring Boot microservices** supporting core banking operations like payments, fund transfers, and account management, leveraging **Spring Web** for scalable RESTful API design and **Spring Data JPA** for database interaction.
- Delivered front-end features using **Angular 14**, **TypeScript**, and **RxJS**, focusing on component-based architecture, seamless API integration, and efficient state handling for scalable web applications.
- Integrated external systems for KYC verification and real-time fraud detection using **RESTful APIs**, implementing **DTO mapping**, centralized **exception handling**, and **API versioning** to enhance compliance and security.
- Implemented **Redis caching** to reduce database load and improve API response times in high-concurrency scenarios.
- Engineered **Spring Batch** jobs to automate settlements, reconciliations, and scheduled financial reporting, ensuring transactional integrity, error handling, and timely data processing across distributed systems.
- Secured application architecture using **Spring Security** and **OAuth 2.0**, implementing robust authentication and authorization aligned with **OWASP guidelines** and industry compliance standards to safeguard against vulnerabilities.
- Designed and optimized **Oracle database schemas**; implemented efficient **SQL** and **PL/SQL queries** using **JDBC** and applied indexing, partitioning, and connection pooling strategies for optimized transaction processing.
- Automated **CI/CD pipelines** using **Jenkins**, **Docker**, and **Git**, streamlining **build**, **test**, and **deployment** workflows.
- Led production issue investigations through **log analysis**, **Postman**-based API testing, and performance profiling, implementing root cause fixes and preventive measures to ensure system stability.
- Collaborated in **Agile/Scrum** teams using **JIRA** and **Confluence**, actively contributing to sprint planning, backlog refinement, peer code reviews, and release documentation.

Environment: Java 11, Spring Boot, Angular 14, Oracle DB, SQL, Redis, Spring Web, Spring Data JPA, Jenkins

Role: Full Stack Java Developer

Jan 2021 - Jul 2022

Client: Kotak Life Insurance

Location: Hyderabad, India

Roles and Responsibilities:

- Modernized a monolithic insurance application into **microservices architecture** using **Spring Boot**, handling modules like policy issuance, claims processing, and premium calculations.
- Designed reusable UI components using **React 17**, **React Hooks**, and **TypeScript**, optimizing quoting, underwriting, and policy servicing workflows, resulted in a 25% reduction in development effort and improved code reusability.
- Integrated **PCI-DSS-compliant payment gateways** to support secure online premium payments, refunds, and real-time transaction validation using **JWT-based authorization**, **HTTPS**, and centralized **audit logging** for traceability.
- Enhanced system scalability and resilience by implementing asynchronous processing for **CRUD APIs** using **Spring Boot's** features and **RabbitMQ** message-driven architecture, reducing latency and improving throughput.
- Developed and consumed **SOAP-based web services** using **Spring Web Services** and **JAXB** for partner platform integrations, including agent onboarding, claim validations, and third-party verification systems.
- **Containerized** applications with **Docker** and deployed to **Kubernetes (K8s)** clusters with **Helm charts**, enabling seamless rollouts, auto-scaling, and fault-tolerant architecture across multiple environments.
- Established **CI/CD pipelines** in **Jenkins**, integrating **Git**, **Docker**, and **SonarQube** for automated builds, code quality checks, static code analysis, and security vulnerability scans.
- Tuned **PostgreSQL** query performance using **multi-column indexes** and execution plan analysis, improving API response times by 20–30% for key operations like policy search and claims lookup.

Environment: Java 11, Spring Boot, React 17, PostgreSQL, Docker, Kubernetes, Git, Docker, Jira, SOAP, RabbitMQ

CERTIFICATIONS

- AWS Certified [Solutions Architect - Associate](#) (Feb 2025)
- AWS Certified [Cloud Practitioner](#) (Sep 2024)

EDUCATION

Master of Science in Computer Science

Bradley University, Peoria, Illinois

Related Courses: Data-Structures and Algorithms, Software Engineer, Machine Learning, and Artificial Intelligence
