

RASHMIKA RANJAN

New York, New York rashmika.ranjan@nyu.edu +1 (929) 327-4129 LinkedIn Github

Education

New York University

09/23 - 05/25

- Masters in Computer Science | GPA: 3.6/4.0

- Data Structures and Algorithm, Principles of Database Systems, Foundations of Data Science, Cloud Computing, Big Data

Amity University

07/17 - 06/21

- Bachelor of Technology in Computer Science and Engineering | GPA: 3.7/4.0

Skills

Languages: Python, Shell Scripting, SQL, HTML5, CSS3, JavaScript, TypeScript, PL/SQL

Cloud & DevOps: AWS, CI/CD, Docker, Kubernetes, GitHub Actions

Databases: MySQL, DynamoDB, MongoDB, Oracle, PostgreSQL, ElasticSearch

Tools & Libraries: Pandas, PyTest, JIRA, Dynatrace APM, Kafka, Redis

Frameworks & Libraries: Django, FastAPI, Flask, React, Apache Spark

Experience

Backend Developer Intern, KNEAD - FinTech Startup

07/2025 - Present

- Developed backend APIs using TypeScript and Node.js to power a no-code platform for building personalized investment strategies.
- Modeled relational schemas and processed financial data in PostgreSQL to support portfolio tracking and performance metrics.
- Implemented RESTful endpoints with Redis caching and FastAPI-based services that automate portfolio logic, trigger trade simulations, and manage user-defined investment flows.

Teaching Assistant, NYU - Principles of Database Systems

09/24 – 05/25

- Delivered tailored support to 100+ students, clarifying complex topics like ER modeling, integrity constraints, transactions, and analytical functions.
- Designed and evaluated assignments on database design, normalization, indexing, and SQL query optimization, reinforcing key database principles.

Associate Software Engineer, STIBO SYSTEMS

01/23 – 07/23

- Built and optimized frontend modules using React and AWS (Lambda, S3) to streamline asynchronous workflows, improving task completion rates by 12% and cutting UI-related support tickets by 10%.
- Developed modular Python/Flask solutions to extend STEP MDM tool functionality, boosting user engagement by 19% and reducing redundant server calls through DynamoDB caching.
- Established CI/CD pipelines with GitHub Actions, enabling seamless deployments and upgrades, ensuring 99.9% system uptime.
- Integrated Slack-JIRA automation and applied agile practices to enhance change management and reduce incident resolution time by 18%.

Associate Professional Software Engineer, DXC TECHNOLOGY

05/21 - 10/22

- Automated system monitoring and log parsing using Python and Shell scripts, reducing manual checks by 15% and improving process consistency.
- Created React.js dashboards integrated with REST APIs to visualize infrastructure health in real-time, accelerating incident response by 17%.
- Developed internal reporting tools using Flask, and MySQL, improving data retrieval speed by 10% and reducing repetitive queries.
- Applied Git version control and led branch management efforts during sprint releases, maintaining release cadence across teams.

Projects

Swipply | AWS-Based Job Search Platform

- Designed and implemented a scalable job search platform using AWS, leveraging Route 53 for domain management, Lambda for serverless backend logic, and DynamoDB for low-latency, scalable data storage.
- Built WebSocket APIs for real-time chat communication, enabling seamless recruiter-candidate interactions.
- Utilized AWS SQS for asynchronous task processing and leveraged Kubernetes for efficient workload distribution, reducing database lookups and improving data retrieval efficiency.

World on Wheels

- Developed a car rental management platform with a Flask backend and an interactive HTML, CSS, and JavaScript frontend.
- Utilized MySQL for structured data storage and optimized queries for efficient rental record retrieval.
- Integrated RESTful APIs to manage vehicle availability, customer data, and payment transactions seamlessly.
