

Rasi

+1 512 566 5854 | rasikumar.battula16@gmail.com

Professional Summary:

Over 6+ years' experience in Back-end and Front-end development with an ability to handle any part of the process efficiently. To succeed in an environment of growth and excellence and let me work in the leading areas of technology, a job that gives me opportunities to learn, innovate and enhance my skills and strengths in conjunction with organization goals and objectives.

- Strong experience across requirement Gathering, Analysis, Design, Coding, Testing, and Deployment in Agile (SCRUM), TDD, Pair Programming, and Waterfall models.
- Expertise in **Java SE 8/11** including Streams API, Lambda functions, Functional Programming, Generics, Multithreading, Executor Services, Transaction Management, Collections, and Exception Handling.
- Implemented Java EE design patterns such as **Singleton, Abstract Factory, DAO, DTO, and Business Delegate** for distributed multi-tier enterprise applications.
- Hands-on in SOA and Microservice architectures using **REST (JAX-RS), SOAP (JAX-WS), JAX-RPC, and JAXR** with frameworks like **Apache CXF, Jersey, and Axis**.
- Strong experience with **Spring Boot, Spring MVC, IOC, AOP, Spring Data, Spring Security**, and OAuth 2.0 with JWT-based authentication.
- Worked with Spring Integration, Mule ESB, Apache Camel, and CXF to integrate enterprise applications.
- Experienced with Apache Kafka, RabbitMQ, ActiveMQ, and IBM MQ for asynchronous messaging and distributed systems.
- Proficient in AngularJS, Angular 8–14, React.js (Redux, Flux), Backbone.js, Ember.js, and Handlebars, developing SPAs and reusable UI components.
- Extensive experience with HTML5, CSS3 (Sass/Less), Bootstrap, JavaScript (ES6/TypeScript), jQuery, Ajax, JSON, JSP, and responsive design.
- Good expertise with Node.js (Express.js) for building non-blocking, event-driven backend applications.
- Built scalable SPAs using MongoDB, Express.js, Angular, and Node.js, with solid experience in integrating APIs and services.
- Designed and developed relational databases (Oracle, MySQL, SQL Server, DB2) using PL/SQL, Triggers, Stored Procedures, and NoSQL databases like MongoDB.
- Strong in unit and integration testing using JUnit, Mockito, EasyMock, Jasmine, Karma, Mocha, Chai, Selenium WebDriver, Cucumber (BDD), JMeter, and Spock.
- Hands-on with Jenkins, Hudson, Travis, Bamboo, Puppet, and Chef for building automation, configuration management, and deployment pipelines.
- Extensive AWS experience with EC2, S3, EBS, IAM, Elastic Beanstalk, ECS, Lambda, VPC, CloudFront, RDS, DynamoDB, CloudWatch, CloudFormation, Route53, and Auto Scaling.
- Developed dashboards and real-time analytics with Splunk, ELK (Elasticsearch, Logstash, Kibana), Grafana, Sumo Logic, DataDog, and New Relic.
- I worked with IBM WebSphere, Oracle WebLogic, JBoss, and Apache Tomcat for deploying enterprise Java applications.
- Implemented application security with Spring Security, JWT authentication, OAuth 2.0 authorization, and AWS IAM policies.
- Expertise in using Maven, Gradle, NPM, Bower, Babel, Gulp, Grunt, and Webpack for dependency and build management.
- Experienced with Git, SVN, Bitbucket for source code management and Agile tools for sprint planning, collaboration, and delivery.

Technical Skills

Programming Languages	C, Java, JavaScript, Python
Java/J2EE Technologies	Servlets, Spring, JPA, JTA, JDBC, JSP, JSTL, RMI, Applets.
Frameworks	Struts 2.5, Hibernate 5.x, Spring 5.0, Spring Batch, Spring Boot, Spring Security, Spring AOP, Spring Core, Spring IOC, JSF.
Web Technologies	HTML, HTML5, CSS/CSS3, AJAX, jQuery, Bootstrap, XML, JSON.
Database	SQL Server, MySQL, Oracle, MongoDB, DB2
JavaScript Frameworks	AngularJS, Angular 14, jQuery, React.js, Node.js, Backbone.js, Express.js, Ember.js
Web Services	XSD, WSDL, Apache Axis, SOAP, Restful, GraphQL.
Messaging	JMS (Java Message Service), IBM MQ, Apache Active MQ, Apache Kafka.
Web Application Servers	Oracle WebLogic 10.x/9.x, IBM WebSphere 8.x/6.x, Apache Tomcat 8.0/7.x/6.x.
Methodologies	Agile, Waterfall, SCRUM.
Testing Tools	JUnit, Mockito, Jasmine, Karma, Mocha, Selenium.
Version Control	SVN, CVS, GIT
Build Tools	Maven, Gradle

Professional Experience :

Parallon group, Saint Louis - Missouri | Full Stack Developer | April 2024 – Present

- Migrated legacy front-end modules to **Angular 14** using **TypeScript**, modernizing patient registration, billing, claims, and reporting applications while preserving existing business workflows and validation logic.
- Designed responsive and accessible user interfaces using **HTML5**, **CSS3 (SASS)**, and **Bootstrap**, ensuring consistent user experience across desktop and mobile platforms for healthcare staff.
- Integrated **GraphQL APIs** via **Apollo Client** for optimized data retrieval in claims dashboards, enabling precise data queries aligned with business requirements.
- Developed reusable UI components, directives, and services to standardize business logic for data entry, claims validation, and payment processing across modules.
- Led migration from a monolithic system to a **Spring Boot microservices** architecture, decomposing business domains into independent services such as Patient, Claims, Payments, and Reporting while maintaining transactional consistency.
- Refactored and reimplemented existing business workflows such as claim adjudication, eligibility validation, and billing reconciliation using **Spring Boot**, **Spring Cloud**, and **Java** features including Records, Streams, and enhanced pattern matching.
- Developed **RESTful APIs** using **Spring MVC** and **JAX-RS**, implementing **OAuth 2.0** and **JWT** for secure communication between healthcare systems and external insurance partners.
- Integrated **MuleSoft ESB** for data exchange between new microservices and legacy systems like **Oracle Financials**, **Epic**, and **Cerner**, ensuring business continuity during phased migration.
- Enhanced backend persistence using **Hibernate ORM** with **PostgreSQL** and **MongoDB**, optimizing data access for patient records, claim histories, and reconciliation transactions.
- Designed and implemented **Apache Kafka**-based event-driven communication between migrated microservices for real-time synchronization of patient, claim, and payment data.
- Replaced legacy **IBM MQ** workflows with **Kafka topics** to ensure reliable message delivery for claim submissions, payment confirmations, and eligibility verification events.
- Configured **Kafka clusters**, partitions, and consumer groups for high availability and message consistency across migrated domains.
- Deployed migrated applications to **AWS** using **EC2**, **RDS**, **S3**, **CloudFront**, and **Lambda**, ensuring scalability, reliability, and security for the modernized healthcare platform.

- Containerized all microservices using **Docker** and managed deployment with **Kubernetes (EKS)**, enabling seamless rollout of migrated components.
- Implemented **CI/CD pipelines** in **Jenkins** for automated builds, testing, and deployments, ensuring smooth transition between legacy and new environments.
- Used **Terraform** and **CloudFormation** for infrastructure automation, maintaining consistent provisioning across development, staging, and production environments.
- Set up monitoring and alerting using **CloudWatch**, **SNS**, and **Grafana** for proactive detection of performance issues post-migration.
- Developed unit tests with **JUnit 5** and **Mockito** to validate migrated service logic, ensuring functional parity with the legacy system.
- Implemented UI automation using **Karma** and **Jasmine** for Angular components to verify business flow consistency across migrated modules.
- **Redis** introduced to improve performance of high-frequency data such as provider and plan details within migrated services.
- Utilized **Cassandra** for storing transactions and audit histories to ensure traceability across all migrated components.
- Supported legacy modules on **JBoss EAP** during migration, ensuring uninterrupted business operations and smooth cutover to microservices.
- Implemented **Kibana**, **Grafana**, and **DataDog** dashboards for real-time observability and cross-system traceability across migrated and legacy modules.
- Collaborated with **Agile Scrum** teams for iterative migration planning, sprint execution, and release validation, aligning deliverables with business milestones.

Environment: Angular 14, TypeScript, Java 11, Spring Boot, Spring Cloud, Hibernate, PostgreSQL, MongoDB, Redis, Cassandra, Apache Kafka, AWS, Docker, Kubernetes (EKS), Jenkins, Terraform, MuleSoft, GraphQL, Drools, Kibana, Grafana.

Mercy Health | Software Developer | Jan 2023 – March 2024

- Designed and developed responsive, interactive user interfaces using **React.js 17**, **Redux Toolkit**, and **React Hook Form** for patient payments, refunds, and transaction workflows.
- Built reusable and modular **React components** with **Bootstrap 5**, **CSS3**, and **HTML5**, ensuring consistent look and feel across POS terminals, admin dashboards, and patient portals.
- Implemented client-side validation logic for multiple payment methods, insurance checks, and real-time field updates.
- Created data visualization dashboards using **Recharts** and **D3.js** for transaction history, payment distribution, and financial summaries.
- Developed scalable **RESTful APIs** using **Node.js 16** and **Express.js**, handling payment processing, user management, transaction reconciliation, and reporting.
- Integrated with external payment gateways such as **PaymentTech**, **InstaMed**, **ApplePay**, and **GooglePay**, implementing secure tokenization and error handling.
- Built middleware services for **Oracle R12 ERP** integration to enable automated ledger posting, real-time inventory updates, and financial reconciliation.
- Implemented asynchronous processing using **message queues** and **event-driven design**, allowing concurrent handling of multiple payment and notification workflows.
- Utilized **PostgreSQL** and **MongoDB** for data persistence, designed optimized schemas, and implemented data access logic with **Sequelize ORM** and **Mongoose**.
- Designed **serverless components** using **AWS Lambda**, **API Gateway**, **Kinesis Data Streams**, and **DynamoDB** for payment event handling and transaction logging.
- Deployed containerized applications using **Docker** and **Amazon EKS**, managing configurations and environment variables securely.
- Built and maintained **CI/CD pipelines** in **Jenkins** for automated builds, testing, image creation, and multi-environment deployments.

- Developed automated test suites using **Mocha**, **Chai**, and **SuperTest** for backend APIs, **Karma**, **Jasmine**, and **Cucumber/Selenium** for frontend testing.
- Implemented integration and regression testing for payment workflows, ensuring API reliability and functional consistency.
- Conducted performance testing using **Apache JMeter** to validate system scalability and stability.
- Created data migration scripts for transitioning from legacy **Oracle** systems to new **PostgreSQL** and **MongoDB** structures.
- Collaborated with business analysts and **QA teams** to define functional specifications and ensure compliance with healthcare financial standards.
- Supported production deployments, monitoring, and issue resolution through **AWS CloudWatch** and **Elastic Stack** dashboards.
- Enhanced **POS system** performance by implementing optimized React components and efficient SQL queries to support faster checkouts and responsive transaction handling.

Environment: React.js 17, Redux Toolkit, React Hook Form, Node.js 16, Express.js, HTML5, CSS3, Bootstrap 5, PostgreSQL, MongoDB, Sequelize, Mongoose, AWS (Lambda, API Gateway, Kinesis, DynamoDB), Docker, Kubernetes, Jenkins, Mocha, Chai, Karma, Jasmine, Cucumber, Selenium, JMeter

Beehyv Software, Hyderabad – India | Associate Software Developer | Sept 2021 – Dec 2022

- Migrated legacy **Backbone.js** frontend to **AngularJS 1.6**, creating reusable components and services that supported end-to-end policy lifecycle management, including policy creation, renewal, and cancellation workflows.
- Developed **AngularJS** directives and controllers to display premium calculations, coverage eligibility, and claim status, enabling agents and underwriters to make informed decisions.
- Designed responsive UI for agent portals, policy dashboards, and claims modules using **HTML5**, **CSS3**, **Bootstrap**, and **jQuery**, ensuring seamless user interactions for policy management and claims processing.
- Implemented **CRUD** operations for policies and claims with real-time validations, ensuring adherence to underwriting rules and regulatory requirements.
- Maintained a clean **MVC architecture** during migration, preserving business workflows like risk assessment, coverage validation, and policy endorsements.
- Built backend modules with **Spring Core**, **Spring Security**, **Spring JPA**, and **Hibernate** to implement core business logic, including policy lifecycle management, premium calculation, claims adjudication, and agent commission processing.
- Designed **MuleSoft Anypoint Platform**-based **SOA** integrations connecting internal systems (billing, underwriting, document management) with external partners (reinsurers, payment gateways, regulatory systems).
- Developed **RESTful** and **SOAP** web services for policy CRUD, claim processing, and premium computation, ensuring business rules were enforced consistently across web and mobile channels.
- Implemented workflow automation for underwriting, claim approval, and reinsurance settlements, reducing manual intervention and improving data accuracy.
- Optimized data access with **Hibernate** caching (**EHCACHE**) and lazy loading, supporting high-volume operations like batch premium calculations and policy renewals.
- Wrote **SQL** and **PL/SQL** procedures to automate premium computations, claim adjudication, and compliance checks, ensuring accuracy and traceability of financial and regulatory processes.
- Configured connection pooling with **HikariCP** and managed **Oracle** database transactions with proper isolation levels for concurrent updates.
- Integrated **AJAX** and **JSON calls** to communicate with **RESTful services** built on **Mule ESB**, enabling **asynchronous interactions** across enterprise modules.
- Designed asynchronous workflows using **JMS** and **Apache ActiveMQ** to handle policy updates, claim notifications, and reinsurance data exchange, decoupling systems while ensuring timely business processing.
- Deployed applications to **AWS EC2** and **S3**, leveraging **CloudFormation** templates for scalable infrastructure supporting enterprise insurance operations.
- Managed hybrid **AWS** infrastructure with **RDS** for transactional data and **ElastiCache** for caching user sessions and reference data.

- Automated builds and deployments using **Maven** and **Jenkins**, ensuring consistent releases and uninterrupted business operations.
- Integrated **CA SiteMinder SSO** for enterprise-wide authentication and role-based access control, ensuring secure access to sensitive insurance data across multiple applications.
- Built automated test frameworks using **TestNG**, **Selenium WebDriver**, **Protractor**, and **Cucumber** to validate business-critical workflows such as policy issuance, premium calculation, claim adjudication, and regulatory reporting.
- Monitored application performance using **Log4j**, diagnosing and resolving **memory**, **thread handling**, and **I/O bottlenecks**.

Environment: AngularJS 1.6, Backbone.js, HTML5, CSS3, Bootstrap, jQuery, Spring Framework, Spring Security, Hibernate, Oracle 11g, MuleSoft ESB, REST, SOAP, ActiveMQ, AWS (EC2, S3, RDS, CloudFormation), Maven, JBoss, Jenkins, TestNG, Selenium, Protractor, Cucumber, Drools, CA SiteMinder, Log4j.

VeServe, Hyderabad, India | Software Engineer | April 2019 –Aug 2021

- Developed responsive SPAs using **AngularJS** and **Ember.js** for financial operations dashboards, transaction monitoring, and batch job tracking.
- Built reusable **AngularJS components, services, directives, filters, and routing**; implemented **Ember.js components, services, and templates** for dynamic UI.
- Created cross-browser, responsive UI using **HTML5**, **CSS3**, **Ajax**, **JSF**, and **PrimeFaces** for operations, customer service, and executive interfaces.
- Designed **SOA integration hub** using **MuleSoft** to connect multiple legacy systems via **SOAP**, **REST**, **FTP/SFTP**, **JDBC**, and **JMS**.
- Developed **SOAP web services** using **Apache Axis2** and **JAX-WS** to expose legacy mainframe and core banking functionalities as enterprise services.
- Built **RESTful APIs** using **JAX-RS** to support **microservices architecture** and modern HTTP-based integrations.
- Implemented **microservices** for core financial operations, integrating them with **Spring Batch** for batch processing and ensuring communication via **REST** and **SOAP** endpoints.
- Applied design patterns (**Singleton**, **Factory**, **Abstract Factory**, **Session Facade**) for maintainable and reusable backend architecture.
- Built data access layer using **Spring JPA** for efficient database interactions, caching, and transaction management.
- Leveraged **Spring AOP** for logging, auditing, security, and transaction management across services.
- Deployed enterprise Java applications to **IBM WebSphere** and **Oracle WebLogic** clustered environments with high availability and failover configurations.
- Containerized **Spring Boot microservices** with **Docker** and deployed to **AWS ECS (Fargate)**, using **ALB**, auto-scaling, **CloudWatch** monitoring, **RDS multi-AZ**, and **S3** storage.
- Integrated asynchronous messaging using **MuleSoft ESB** and **JMS** within batch and real-time processes.
- Configured and executed **Spring Batch** for daily and monthly backend processing, ensuring data reflected accurately in UI dashboards.

Environment: Angular Directives, AOP, Mule ESB, Spring Batch, Apache Axis, IBM WebSphere, Oracle WebLogic Server, Docker, AWS Console services, Selenium.
