Summary

Experienced Full-Stack Developer with a strong background in Java, Spring Boot, Angular, and React. Skilled in implementing microservices architecture and leveraging AWS and GCP for scalable solutions. Successfully reduced operational costs by 15% through cloud architecture optimization. Aims to leverage expertise in developing robust web applications to drive innovation and efficiency in the target role.

Skills

- **Languages:** Java 8/11/17, Python, Kotlin, Groovy, GO
- **Java/J2EE Technologies:** Core Java, JMS, Java Beans, JDBC, Java Multithreading, Collections
- **Frameworks:** Spring, Hibernate, Spring Boot, Microservices, Angular 10/8/6
- **Web Technologies:** HTML5, XML, DOM, CSS3, JavaScript, jQuery, Angular.JS, Bootstrap, React.JS, REDUX, React Native, Node.JS, TypeScript, SQS, Apache Kafka
- **APIs & Web Services:** RESTful APIs, SOAP, JSON
- **Cloud Platforms:** AWS, Google Cloud, Azure
- **IDEs & Tools:** Eclipse, IntelliJ IDEA, NetBeans, Visual Studio Code
- **App servers:** IBM Web Sphere, Apache Tomcat, BEA Web Logic, Jboss
- **Version Controls:** SVN, CVS, GitHub, Bitbucket
- **Databases/Tools:** Oracle, SQL Server, MySQL, PostgreSQL, MongoDB
- **Design Patterns:** Singleton, Factory, Observer, MVC
- **Testing Frameworks:** JUnit, TestNG, Mockito, Selenium, TestNG
- **Methodologies:** Agile, Scrum, Kanban
- **Operating System:** Windows, Linux, UNIX
- **Soft Skills:** Project Management, Verbal Communication, Problem Solving Skills

Work Experience

Cigna Health Care | Full stack Java Developer

Sep 2023 - Present

- Developed single-page apps for healthcare platforms using Agile Scrum methodologies throughout the SDLC, improving user satisfaction and meeting healthcare standards
- Monitored and conducted UI testing using Karma, Jasmine, Protractor for Angular, and Mocha, Chai for React JS and Backbone JS, ensuring robust functionality and compliance with healthcare standards, leading to improved application reliability
- Design and deploy scalable cloud architectures using AWS services (S3, DynamoDB, RDS, EC2), reducing operational costs by 15% and enhancing security and reliability in healthcare applications.
- Leveraged DevOps practices, including CI/CD pipelines, Docker, and Kubernetes, to automate deployment processes, ensuring smooth and efficient release cycles and compliance with healthcare applications, which improved deployment speed and reliability
- Implemented scalable backend services and microservices using Java, Spring Boot, Spring MVC, Hibernate, and RESTful APIs to support high-volume healthcare applications.
- Conducted code reviews and implemented best practices to ensure code quality and maintainability, improving team efficiency and aligning with Cigna's standards
- Employed Agile methodologies, Scrum/Kanban, to deliver incremental, iterative improvements, align with project timelines and business objectives.
- Implemented advanced authentication and authorization mechanisms using OAuth and JWT, securing sensitive patient data and aligning with HIPAA standards to protect confidential information
- Defined, designed, and implemented microservices architecture to support scalable and resilient healthcare applications, enhancing system flexibility
- Analyzed and optimized database performance and managed data storage solutions using SQL and NoSQL databases like Oracle and MongoDB, supporting high-volume transaction processing. Conducted unit tests using JUnit, ensuring the functionality of the developed apps and reducing bugs
- Designed, developed, and optimized web applications using React for the frontend and Node.js with Express for the backend, ensuring high performance, scalability, and security, which improved user satisfaction and reduced load times
- Led the integration of assigned models into applications and collaborated with data scientists to enhance functionality and derive actionable insights, which improved application performance and user engagement. Refined SDLC processes to optimize development efficiency, code quality, and time-to-market, and managed AWS for scalable and reliable file storage
- Analyzed, monitored, and maintained cloud-based solutions to enable remote monitoring, key data analytics, and software updates for autonomous robots and industrial automation systems, which improved system uptime and data accuracy.
- Analyzed, designed, developed, monitored, and managed the transition from monolithic systems to microservices, ensuring seamless communication between services, which improved system flexibility and reduced downtime. Designed, built, and led a high-performing tech team, fostering a culture of collaboration, innovation, and continuous learning
- Optimized database queries and schemas on MySQL and MongoDB, reducing response times and ensuring data integrity for sensitive healthcare transactions.
- Collaborated with cross-functional teams in Agile environments, participating in sprint planning, backlog grooming, and code reviews to deliver high-quality software.

JPMC | Full Stack Developer

Jul 2022 - Aug 2023

- Participated in all phases of SDLC, including requirements gathering, design, and analysis of customer specifications, ensuring compliance with financial industry standards. Developed and maintained user manuals and training resources, which enhanced productivity in finance-focused applications
- Optimized APIs and led the design of scalable web apps using Java, Spring Boot, and Angular to enhance data exchange and address performance issues.
- Conducted code reviews and provided feedback to ensure high standards of code maintainability and extensibility according to the company's code standards. Communicated concepts and methodologies to technical and non-technical stakeholders
- Developed secure and scalable AWS solutions using EC2, S3, Lambda, and RDS to process financial data and improve client management and billing performance.
- Led deployment and monitoring of web applications using React, implementing caching strategies with Redis to reduce latency and improve transaction processing speeds.
- Mentored junior engineers through thorough code reviews, enhancing team performance and code quality, while collaborating with product managers to deliver software solutions that met business needs.
- Gathered requirements and defined project scopes to deliver financial solutions, achieving a 20% reduction in defects through unit testing with JUnit, which improved software reliability and project success
- Produced well-designed, efficient, and fully functional code, taking ownership of execution. Collaborated with the product team to identify and solve user problems, leading to enhanced user satisfaction and product usability
- Implemented and maintained CI/CD pipelines with Jenkins and AWS Cloud Build, optimizing development workflows and minimizing downtime in deployment for financial applications, which improved project efficiency. Developed unit/integration tests using JUnit/Mockito, ensuring code reliability and minimizing bugs in production environments
- Integrated APIs to enhance communication capabilities, monitored application health and performance with tools like Splunk and Dynatrace, resolving production issues to minimize downtime and ensure customer satisfaction.

eBay | Java Developer

May 2018 - Jul 2021

- Designed a scalable system based on Object-Oriented Concepts, OOAD, and J2EE design patterns, implementing the Model View Controller (MVC) architecture using the Spring framework. Developed unit and integration tests using JUnit and Mockito, ensuring code reliability and minimizing bugs, which improved system stability
- Enhanced RESTful web services with JAX-RS, Apache CXF, and Spring, implemented Hibernate and JPA persistence, and optimized Oracle/MySQL queries to improve user experience.
- Developed RESTful web services to enhance eCommerce functionality and marketplace integration, optimizing eBay's customer and seller platforms using Java, Spring MVC, and JSP.
- Leveraged AWS services such as Amazon EC2, Amazon RDS, and AWS Lambda for deploying cloud-based applications. Worked with QA teams to identify and resolve bugs, ensuring high-quality software releases. Provided mentorship and development opportunities to team members, which improved team performance and project delivery
- Resolved technical challenges, optimized performance and user experience, and successfully executed projects that aligned with business goals, leading to increased project success rates
- Conducted code reviews and optimized SQL queries, improving database performance on MySQL and PostgreSQL backends.
- Optimized the performance of eCommerce application through asynchronous processing with Kafka and RabbitMQ, ensuring seamless data flow between buyer and seller modules.
- Developed and optimized responsive eCommerce web pages using HTML5, CSS3, JavaScript, and React.js, improving the user experience for buyers and sellers on eBay's marketplace.
- Implemented reusable front-end components with React.js, Angular accelerating development and maintaining consistent design patterns across multiple product pages.

Education

Texas A&M University - Commerce | Master of Science, Computer Science

Aug 2021 - May 2023
