

Raveena Deolankar

(510) 320-3590 | raveenadeolankarwork@gmail.com | LinkedIn

Professional Summary

5+ years of data experience as a Data Engineer, designing and managing scalable cloud-based pipelines, ETL workflows, and data warehouses using Python, SQL, Snowflake, SAP HANA, and Azure. Expert in building interactive dashboards and reports with Power BI, Tableau, and SSRS, automating workflows, and implementing data quality frameworks for accurate, actionable insights. Skilled in collaborating with cross-functional teams to optimize data architectures, streamline operations, and enable data-driven decision-making. Proficient in integrating CRM systems, monitoring pipelines, and applying analytical modeling to enhance business efficiency and reporting accuracy.

Skills

Programming & Scripting: Python (Pandas, NumPy, PySpark), SQL, F#, JavaScript, HTML, CSS

Data Warehousing & Databases: Snowflake, SAP HANA, Redshift, Teradata, MySQL, PostgreSQL, NoSQL

ETL & Data Pipelines: Talend, Apache Nifi, SSIS, Azure Data Factory, Azure Batch, Airflow, Luigi, CI/CD pipelines (Bitbucket, GitHub)

Cloud Platforms: AWS (S3, Redshift, QuickSight), Azure (Data Lake, Monitor, Power Automate), Google Cloud (Dataflow, Vertex AI)

BI & Visualization: Power BI, Tableau, SSRS, QuickSight, Excel (Advanced, Macros, VBA)

Data Analysis & Modeling: Data cleaning, anomaly detection, predictive modeling, forecasting, ML model deployment, deep learning (CNNs, feature extraction, backpropagation), Python-based analytics

Machine Learning & AI: TensorFlow, Scikit-learn, Embeddings, NLP, Functional Programming for Neural Networks (F#)

CRM & Reporting Tools: Salesforce CRM & Reports, SharePoint, SurveyMonkey, Qualtrics

Monitoring & Automation: Python automation scripts, Data quality monitoring frameworks, Azure Monitor, workflow automation, alerting

Experience

Data Engineer | Liberty Mutual Insurance, USA

Aug 2024 – Present

- Architected and managed scalable, cloud-based data pipelines integrating financial, claims, and customer data from Salesforce CRM and third-party APIs into Snowflake and SAP HANA, ensuring secure ingestion and transformation for enterprise-wide analytics.
- Implemented automated data validation, anomaly detection, and predictive AI models using Python and Spark to identify fraudulent claims, reducing false positives by 20% and accelerating risk assessment processes.
- Enhanced BI infrastructure by integrating SSRS and Power BI for unified financial and claims reporting, improving data accessibility and report generation efficiency by 70%.
- Developed machine learning-based models for claims prediction and premium forecasting, driving 15% improvement in accuracy and enabling data-driven business decisions.
- Designed and deployed interactive dashboards in Power BI and Tableau to visualize KPIs, customer retention metrics, and fraud indicators, enhancing operational visibility for senior executives.
- Partnered with finance and IT teams to automate workflows in Snowflake and Talend, increasing process efficiency by 60% and ensuring data consistency across SAP HANA and CRM systems.
- Led cross-functional collaboration across finance, risk, and analytics teams to establish standardized data models and reporting frameworks, promoting adoption of centralized BI and AI platforms across the enterprise.

Data Engineer | Auckland Council, Auckland, NZ

May 2023 – Apr 2024

- Designed and implemented scalable Snowflake and Python-based data pipelines to handle large emergency response datasets, reducing data processing times from 4 hours to 45 minutes and enabling faster, more accurate decision-making during crisis events.
- Built and deployed real-time Power BI dashboards integrated with Python and SharePoint automation, empowering 200+ responders with live insights and improving overall decision-making speed by 35% across multiple emergency operations.
- Established a comprehensive Python-driven data quality and monitoring framework with automated checks and alerts, reducing error resolution time by 75% while ensuring full compliance with internal governance and regulatory standards.
- Developed and optimized advanced data models and ETL workflows using Python, SQL, and Bitbucket-driven CI/CD pipelines, tripling reporting efficiency and lowering system overhead by 40% across critical business intelligence operations.
- Led and mentored a cross-functional team of 15 engineers, analysts, and operations staff to standardize ingestion and integration processes across five departments, driving consistency, scalability, and long-term operational resilience.

Data Engineer | WaterOutlook, Auckland, NZ

Jan 2022 – May 2023

- Migrated 5TB of legacy datasets into Azure cloud platforms by designing optimized storage structures and partitioning strategies using Python and SQL, reducing overall storage costs by 40% while improving complex query performance by nearly 3x.
- Automated enterprise-scale data ingestion pipelines using Azure Batch, SSIS, and Python scripts, building fault-tolerant processes that processed over 1M daily records with 90%+ accuracy, significantly improving reliability and reducing manual intervention.
- Designed and developed compliance dashboards in Power BI and Tableau by integrating regulatory system data through Python-based APIs, enabling faster auditing, streamlining workflows, and cutting reporting timelines by more than 60%.
- Engineered integration of PLC-SCADA sensor data from 50+ industrial devices into real-time monitoring dashboards, utilizing Python for data parsing and preprocessing, which improved operational visibility, optimized energy usage, and enabled proactive anomaly detection.
- Implemented proactive monitoring and alerting using Azure Monitor and Python automation scripts across 20+ client environments, achieving 99% system uptime and enhancing business continuity through rapid issue resolution.

Data Analyst (Digital Data Publisher) | Air New Zealand, Auckland, NZ

- Optimized enterprise aviation databases by restructuring queries, indexes, and schema designs using Python and SQL to support over 1,000 daily users, reducing execution times by 45% and significantly improving responsiveness for operational reporting.
- Migrated eight core operational applications into Azure cloud environments by implementing Python-driven automation scripts and Power Automate workflows, reducing deployment timelines by 70% and enhancing overall release reliability and efficiency.
- Designed and developed internal web applications and REST APIs using JavaScript, HTML, CSS, and Python for backend automation, serving 200+ technical users and improving accessibility, workflow efficiency, and operational performance.
- Redesigned the Quality Management System (QMS) web interface with a modern UI/UX and Python-based data integration layer, increasing usability and user satisfaction by 85% while reducing onboarding and training requirements by 40%.

Jun 2021 – Dec 2021

Market Research Analyst | BeeBio, NZ

- Assisted in conducting global market analysis for BeeBio’s Active Repair Anti-Aging Cream and Regenerating Face Mask by collecting data from industry reports and consumer surveys, organizing findings using Python, Excel, Power BI, and Tableau to build clear visual insights.
- Supported survey design, focus groups, and online feedback collection using SurveyMonkey, Qualtrics, Hootsuite, and Python for data cleaning and trend analysis, helping to identify customer preferences for natural skincare products and sustainability-driven buying behavior.
- Contributed to competitor benchmarking and SWOT analysis using Python, SEMrush, SimilarWeb, and NVivo, summarizing results that compared BeeBio’s strengths with leading skincare brands in Asia, Australia, and Europe.
- Collaborated with senior analysts to interpret Python-generated sentiment insights on ingredient demand, highlighting consumer trends and recommending packaging and pricing strategies that improved the brand’s positioning in premium skincare markets.
- Delivered Python-powered analytical reports and visual presentations that guided product launch decisions, contributing to measurable outcomes such as increased sales growth and stronger global market entry for BeeBio products.

Jul 2019 – Dec 2020

Education

Master of Science in Information Technology | University of Auckland, NZ

Jun 2019

Bachelor of Technology in Computer Science Engineering | University of Pune, India

Aug 2017

CERTIFICATES

- Microsoft: Introduction to Python for Data Science**
- IBM CE - Basics of Information Management with DB2**
- IBM CE - Software Foundation (Advanced) Course with C ++Programming**
- Microsoft - Power BI Data Analyst Associate**

Projects

Neural Networks – Flower Part Classification| F#, Deep Learning |[Link](#)

- Designed and implemented a deep learning model in F# to classify and identify flower parts from labeled images, optimizing architecture with feature extraction and backpropagation to achieve high precision in image recognition.
