PROFILE SUMMARY

Experienced Data Engineer with a strong background in developing ML-based CI/CD data pipelines and architecting scalable solutions using AWS, Azure, and GCP. Successfully boosted product sales by 60% through innovative data analytics. Eager to leverage expertise in AI, RAG, Python, SQL, and Spark to drive impactful data engineering projects.

WORK EXPERIENCE

Sr.Data Engineer, William Sonoma Inc., SafeCodeSoft.Inc

08/2024 - Present

Crafted client-centric solutions developing ETL pipelines, data analytics on retail data boosting product sales by 60%.

- Engineered data warehousing, CI/CD ETL data pipelines using Azure Data Factory, Azure DevOps efficiently ingesting data from Azure Data Lake Storage (ADLS), performed transformations using Azure Databricks and stored data in Snowflake, improving data exploration and discovery by 30%.
- Championed Spark, Kafka for batch and real time streaming with data ingestion and transformation using partitioning, indexing, caching, tuning, and stream-analytical solutions.
- Developed Airflow DAGs, Automated Framework for Data Extraction from various data sources connecting Snowflake.
- Crafted prescriptive, predictive, and diagnostic analytics using Databricks, ADF, Azure Synapse Analytics reducing claiming anomalies by 20%.
- Optimized performance using SQL and Spark, leading to faster processing, improved efficiency, and reduced resource consumption.

Data Engineer, Thermo Fisher Scientific/TCS, Hyderabad, India

08/2020 - 08/2022

Crafted client-centric solutions developing ETL pipelines on real time streaming and batch processing on optic products.

- Developed batch/real-time data processing solutions using Data Fusion, GCS, Big Query, Pub/Sub and Dataflow for real time data ingestion from source websites and analysis.
- Developed Spark datasets using Scala and Spark-SQL for optimized data processing. Led the design and implementation of end-to-end ETL processes, reducing data processing time by 40%.
- Developed optimized SQL scripts for ETL processes within Big Query, designed and implemented complex data pipelines in PySpark to extract, transform, and load (ETL) data from various sources into GCP data lakes and data warehouses.
- Designed and developed data pipelines to efficiently extract, transform, and load (ETL) data from diverse sources into GCP and custom Python scripts to automate pipeline orchestration, data quality checks.

Data Engineer, Texas Instruments/TCS, Bangalore, India

05/2019 - 08/2020

Engineered data migration to AWS from enterprise systems by creating data pipelines, resulting in a 45% improvement in forecasting profits.

- Pioneered CI/CD ETL pipelines using AWS Glue and S3 for seamless data ingestion from TLE sources and SAP interfaces. Implemented full and incremental batch load strategies, utilizing AWS Lambda to efficiently manage data transfer to Amazon Redshift.
- Designed and developed dashboards using Athena, Quick Sight to deliver actionable insights for data

scientists and analysts.

- Championed the use of AWS Glue Data Catalog for efficient data organization and cataloging, leading to a \$1.2M annual increase in forecast mapping revenue.
- Developed API Gateways, AWS Lambda functions for serverless data pipelines using Glue Catalog in ETL Migration.
- Leveraged AWS EMR to create Spark-based ETL solutions, facilitating prescriptive, predictive, and diagnostic analytics that improved order analytics by 127%.
- Engineered and implemented data transformations aligned with business logic using Redshift, analyzing and optimizing opportunities, resulting in a 30% improvement in forecast mapping logic accuracy.

Data Analyst Intern, Top Notch Softwares Ltd.

07/2018 - 05/2019

Enhanced Java application for advanced data insights minimizing reduced stockouts and excess inventory.

- Collaborated with Java developers to integrate Python-driven insights, enhancing inventory control and supply chain efficiency, leading to a 40% reduction in stockouts and a 35% decrease in excess inventory.
- Executed Python routines to log into the websites and fetch data for selected options.
- Worked on Data governance which provided medium to track the origin, transformations and movement of data inside the data engineering pipeline.
- Developed SQL Queries, Stored Procedures, and Triggers Using Oracle, SQL and PL/SQL.
- Collaborate with management and internal stakeholders to define business requirements and analytical needs using Tableau dashboards, SQL optimizations for improving e-Commerce performance.

SKILLS

Big Data Tools: SQL, Python, Scala, Java, R, Spark, Kafka, Flink, Snowflake, Talend, SSIS, DBT, Terraform, Databricks Unity Catalog, Informatica, Ansible, Jenkins, FastAPI, REST API, DevOps, Excel, Data Modeling, Kubernetes, Docker, Tableau, Power BI, ETL, UNIX, Linux, LangChain, Llama Index, Pandas, NumPy, Scikit-learn.

Cloud and Databases: AWS (S3, DynamoDB, Glue, Lambda, Kinesis, Redshift), GCP(BigQuery, Bigtable, DataProc, DataFlow, DataFusion, GCS), Azure (AKS, Azure Databricks, Azure Data Factory, Azure Data Lake Storage, Azure Data Synapse Analytics), MySQL, MS SQL, Postgres, Oracle, Mongo DB, FAISS.

EDUCATION

Master of Science in Computer Science (Honors)
California State University, Northridge

08/2022 - 05/2024
GPA – 3.9/4

Bachelor of Technology in Electronics and Communications Engineering
GMR Institute of Technology, India

08/2015 - 04/2019

PROJECTS

AI Data Engineer, CSUN ARCS

11/2022 - 05/2024

- Managed and Implemented batch and real time ETL pipelines for student data improving data analytics by 30% with Azure Data Factory, Kafka and Databricks, ingesting batch data from Canvas LMS, enhancing data processing and analysis efficiency.
- Engineered language query implementation of CSUN data warehouse using LTE, Language Model, LangChain, Retrieval Augment Generation (RAG) and chroma DB.

Stock Price Forecasting using Transfer learning, *Research Project at CSUN*

08/2023 - 05/2024

- Pioneered an Advanced stock price forecasting model with 98.7% accuracy using transfer learning with Data analysis on time series data using Hybrid models, Machine Learning, LSTM, GRU, CNN, RNN, GPTs, and TST.

CERTIFICATIONS

Generative AI, Data Warehousing, Azure Data Engineering, Data Analytics using AWS, RAG using LangChain
