PROFESSIONAL SUMMARY

Data Analyst with 4 years of experience transforming complex datasets into actionable insights to drive business decisions. Skilled in SQL, Python, Tableau, and AWS-based analytics solutions. Adept at building data pipelines, developing dashboards, and delivering predictive analytics to optimize operations. AWS Certified, with strong expertise in statistical analysis, data visualization, and cross-functional collaboration.

EXPERIENCE

Data Analyst | Mitra AI

New York, USA (Nov 2024 - Present)

- **Identified** low engagement on Mitra AI's multilingual voice assistant by analyzing feature usage logs, and redesigned metric dashboards in Tableau to surface key drop-offs—boosting usage of underutilized features by 25% in 3 months.
- **Automated** error-prone Excel-based data workflows into Python scripts for session tracking and weekly reports, cutting manual effort by 6 hours/week and improving reporting accuracy by 40%.
- **Developed** a churn prediction model after product teams struggled to retain active users, resulting in a retention-focused campaign that improved user stickiness by 18%.
- **Unified** inconsistent logs from chat, voice, and UI platforms by designing a centralized schema and pipeline, which reduced dashboard inconsistencies and cut data QA time by 30%.
- **Launched** a lightweight A/B testing framework for evaluating new UI and voice interactions, reducing experiment setup time by 50% and speeding up product iteration cycles.

Data Analyst | Uni Genie

Texas, IL (Remote), USA (May 2023 - Nov 2023)

- **Redesigned** the student-advisor performance dashboard after identifying gaps in follow-up metrics, enabling advisor leads to track lagging response times and cut missed responses by 20%.
- **Built** cohort-based conversion analysis for Uni Genie's AI Copilot tool, uncovering that new user dropped off before 3rd interaction—insights used to redesign onboarding, increasing 7-day retention by 22%.
- **Created** an Excel model to simulate course recommendation logic for advisory teams, improving explanation transparency and reducing support tickets by 15%.
- **Collaborated** with marketing on targeting logic using SQL-driven segmentation of students by interest cluster, improving campaign engagement rates by 28%.
- **Standardized** weekly KPI reporting using automated Python workflows, reducing delivery delays and executive review prep time by 40%.

Technical Operations Lead | Pro Applicant AI

India (Nov 2022- April 2023)

- **Built** a college recommendation scoring engine using user data (test scores, preferences, demographics) that helped reduce counseling time by 40% and increased first-choice match rates by 35%.
- **Analyzed** chat transcripts from the WhatsApp-based onboarding flow to find dropout points—insights led to simplified prompts that improved user completion rates by 25%.
- **Developed** Power BI dashboards to track applicant funnel and counselor productivity, enabling live monitoring that led to a 3-day faster average turnaround.
- **Worked** with marketing to build performance heatmaps across campaigns, helping cut spend on low-ROI platforms by 18% and increase qualified leads by 12%.

Co-Founder and CTO | Spot Pay

India (Jun 2022 – Sep 2023)

- **Analyzed** real-time transaction data to identify patterns in failed payment attempts; surfaced a peak-time API bottleneck that, once resolved, decreased failures by 26%.
- **Built** dashboards for founders tracking user balances, lending frequency, and repayments—insights used to prioritize feature work that led to a 15% increase in daily actives.
- **Ran** time-series analysis on loan default behavior across user segments, helping product team fine-tune repayment reminders and reduce defaults by 10%.
- **Automated** monthly investor reporting using Python and Google Sheets API, saving the team ~10 hours/month and improving transparency for external stakeholders.
- **Flagged** anomalies in merchant onboarding activity using clustering analysis, helping identify and block fake accounts early in the funnel.

Founder and CTO | Surge App

India (Nov 2021 – Apr 2022)

- **Mapped** full user journey from install to first crypto investment using event analytics, revealing key friction at KYC step—redesign improved conversion by 20%.
- **Built** Excel models for tracking round-up investment volumes and user cash flow patterns, helping product team adjust default rounding logic and increase investment volume by 18%.
- **Conducted** retention cohort analysis that uncovered drop-off after first week of app use, insights used to redesign onboarding drip messages and improve 14-day retention by 22%.
- **Ran** weekly A/B tests on investment insight cards in the dashboard, leading to a new layout that increased click-through rates by 27%.
- **Streamlined** KPI tracking by centralizing dashboards and automating daily reporting, reducing time spent gathering metrics by 50%.

EDUCATION

University of North Texas.
master's in computer science

Texas (May 2025)

PROJECTS

User Churn Prediction and Retention Dashboard

Texas, IL(Sep-Dec2024)

- Designed a logistic regression model in Python to predict user churn from behavioral data, achieving 84% accuracy on validation sets.
- Built a Tableau dashboard to visualize churn risk segments and key behavioral drop-off points, helping stakeholders plan retention strategies.
- Automated data cleaning and feature engineering pipelines using pandas and NumPy, reducing preprocessing time by 60%.
- Integrated real-time data exports from PostgreSQL using scheduled SQL queries and Python scripts for weekly executive reporting.

TECHNICAL SKILLS

Data Analytics Tools: Tableau, Power BI, Google Data Studio, Excel (PivotTables, XLOOKUP, Solver), Google Sheets

Programming Languages: Python (pandas, NumPy, scikit-learn, matplotlib, seaborn), SQL (PostgreSQL, MySQL), R (basic)

Data Modeling & Statistics: Linear Regression, Logistic Regression, Hypothesis Testing, A/B Testing, Clustering (K-Means, Hierarchical), Forecasting (ARIMA, Prophet)

Data Processing & Automation: Jupyter Notebooks, Python Scripting, SQL Automation, Pandas Pipelines, Airflow (basic)

Databases: PostgreSQL, MySQL, SQLite, Google BigQuery (basic)

Machine Learning (Applied): scikit-learn (classification, regression, feature engineering), Naive Bayes, Decision Trees, Random Forests (light)

Version Control: Git, GitHub

Reporting & Documentation: Google Slides, Confluence, Notion, Markdown

Operating Systems: Windows, Linux (Ubuntu)
