PROFESSIONALSUMMARY

As a driven Full Stack Software Engineer with over 5 years of experience, I have successfully utilized Agile methodologies throughout all phases of the Software Development Lifecycle to create modern, robust software solutions that consistently exceed customer expectations. My expertise is rooted in Service-Oriented Architecture and multi-tier environments. With a positive attitude and a collaborative spirit, I am always eager to adopt new ideas and technologies to meet organizational objectives. My strong analytical and interpersonal skills, coupled with a proven ability to analyze situations and make decisions in fast-paced environments, underscore my technical expertise and make me a valuable asset to any organization committed to innovation and success.

PROFESSIONALEXPERIENCE

Amazon– Software Development Engineer

Aug 2022 – Aug 2024

Leads, designs, and develops software applications and systems to meet customer's needs, including predicting and creating what they'll need in the future.

- Designed and deployed high-performance REST API's and backend services for Cloud Infrastructure using the Spring Boot and Node.js.
- Dynamic and detail-oriented Frontend Developer with a foundation in TypeScript, JavaScript, extensive experience in designing, developing, and optimizing complex web applications using Angular and React
- Data Flow Visualization : Improved the website to display metric data flow between different sites, ensuring real-time and accurate representation of data transfer. Developed and integrated a dynamic map feature that allows users to view data based on their preferences, enhancing the overall user experience.
- Participated in troubleshooting and resolving critical production issues, employing strong problem-solving skills and utilizing tools such as AWS CloudWatch for monitoring and log analysis.
- Implemented CI/CD systems by utilizing Docker for containerization, Git for version control and Jenkins for continuous integration.
- Utilized Java 11, Spring Boot, Node.js, Terraform and AWS Lambda to architect and implement microservices that streamlined the order processing workflow, significantly reducing the latency, and enhancing the post-payment accounting system performance.
- Integrated Apache Kafka for real-time data processing and event-driven architecture, enabling seamless communication and data synchronization between microservices.
- Implemented Test-DrivenDevelopment(TDD) approachusing Junit, Mockito, Enzyme, PowerMockito.
- Integrated AWS Lambda with other AWS services like Amazon S3, Amazon DynamoDB, and AWS Step Functions to build end-to-end serverless architectures.
- Developed and optimized a microservices architecture with AWS ECS and DynamoDB, enabling the system to manage in significant growth in user traffic during peak periods, thus enhancing scalability and supporting Amazon's growth objectives.
- Created IAM roles, groups, and users, assigning appropriate permissions based on job roles and responsibilities
- Collaborated with cross-functional teams to design, develop, and maintain software solutions for Accounting Service Platform, ensuring a seamless and secure accounting experience for Clients. Actively participated in Agile/Scrum methodologies.
- Integrated Amazon SQS (SimpleQueueService) for building distributed message queuing systems, enabling asynchronous communication, and decoupling of application components for improved scalability and fault tolerance.
- End to End development : Collaborated with cross-functional teams to ensure smooth deployment of features, maintaining high standards of performance and usability throughout the development lifecycle.
- Proficient in developing dynamic and responsive web applications using Angular, demonstrating a deep understanding of Angular's core concepts, including modules, components, services, and directives
- Designed and executed unit test cases using Java, to achieve a high-level coverage across the code base, thoroughly validating the functionality and behavior of the application.
- Implemented integration tests for testing the entire workflow of the application using Coral Explorer.
- Athena Integration for Data handling: Utilized AWS Athena to pull data from external S3 buckets, process and match it with our internal data, and store it in our S3 bucket. This streamlined data management and ensured seamless integration with the website

University of Dayton – Software Developer/ Teaching assistant Sep 2021 – May 2022

- Facilitated undergraduate courses focusing on modern web development practices, specializing in Angular and React frameworks.
- Implemented best practices for responsive design, optimizing the application for various devices and screen sizes, resulting in a significant increase in mobile user engagement.
- Integrated Apache Kafka for real-time data processing and event-driven architecture, enabling seamless communication and data synchronization between micro services, resulting in improved scalability and fault tolerance of the system.
- Utilized Java8 features such as Streams, Lambdas, Functional interfaces, Multi-threading, Collections, Generics, Exception Handling and Execution services to improve code efficiency and the overall performance by 18%.
- Developed and maintained scalable and responsive web applications using Angular and React, contributing to various phases of the software development lifecycle.

Proton Agencies – Software developer

Aug 2019 – Jul 2021

- Designed, developed, and maintained applications with HTML, CSS, and JavaScript.
- Architected the frontend with the React JS and the backend with Java8-SpringBoot, Python-Django and Node.js using Mongo DB as storage.
- Utilized React Router features such as nested routes, route guards and dynamic route matching to create complex navigation structures and user flows within the application.
- Employed React Testing Library or Enzyme for unit and integration testing of React components, ensuring robust and reliable code quality through comprehensive test coverage.
- Integrated Angular projects with CI/CD pipelines, automating testing, build, and deployment processes, which minimized human errors and streamlined release cycles.
- Utilized version control systems like Git and implemented continuous integration and deployment.

SKILLS

Programming / Scripting Language	:Java, C, Python, JavaScript, TypeScript, XML, HTML.
Frameworks/AWS Technologies	: React.js, Angular.js, Node.js, J2EE, Json, Spring (MVC, Boot, Batch), Django, MicroServices, Apache, Tomcat, Kafka, AWS (S3, Lambda, DynamoDB, ECS, CFN, SQS, Athena, Cloudwatch).
Test/Debug/Build/ORM	:Junit, Mockito, Enzyme, Maven, Gradle, JDBC, Hibernate/JPA.
VersionControl/ProjectManagement	: Git(GitHub, Bitbucket, GitLab), Jira, SourceTree, Jenkins.

EDUCATION

University of Dayton- Dayton, Ohio
Master's in computer science (CGPA: 3.8)

RMK College of Engineering and Technology-India
B. Tech in Computer Science (CGPA: 3.4)
