

Over 3years of experience in IT, as **MS SQL Server** Developer in Windows environment. Extensive experience with **Power BI, SQL Azure, SQL Server 2016,2014, 2012, 2008R2, 2008, 2005** and worked extensively on BI Tools like Integration services (SSIS), Reporting services (SSRS) and Analysis Services (SSAS) Expertise in Database design, Data modeling, Data visualization, Data integration, Entity Normalization & Database Creation, Maintenance, Monitoring. Proven ability to Design and Implement end-to-end data solutions for clients across various industries. Adept at working with cross-functional teams and delivering high-quality solutions on time and within budget.

- Good Exposure to entire **Software Development Life Cycle (SDLC)**, documentation of software products with Agile Scrum methodology and experienced in working with **waterfall model**.
- Expert in **Data Warehouse development** starting from **inception to implementation** and ongoing support, strong understanding of **BI application design and development principles**.
- Strong expertise in **Designing, developing, and deploying** the **Reports/dashboards** using **reporting** tools such as **SSRS, Power BI** and integrating these tools with SQL Server to create end-to-end BI solutions.

Technical Skills: *MSBI (SSIS, SSRS, SSAS), Power BI, Azure Data Factory, SQL Server, T-SQL, DAX, Azure SQL Database, Azure Blob Storage and Azure Data Lake Storage.*

MSBI (MSSQL/T-SQL/SSIS/SSRS):

- Expertise in **installing, configuring, Upgrading, and maintaining** SQL Server database systems. Skilled in data warehousing tools, data mapping, unit testing, migration, conversions, and process documentation
- Proficient in designing and implementing **database schemas, tables, views, Synonyms, Sequences, Functions, indexes, and constraints** to meet business requirements and data modeling best practices.
- Highly Skilled in writing and optimizing **T-SQL queries, DML/DDI Scripts, stored procedures, functions, Cursors, and triggers** to support data operations and ensure **data integrity, performance, and scalability**. Extensively used **T-SQL Joins, CTE, Temp tables, Dynamic queries and Sub-Queries** to simplify complex queries involving multiple tables in stored procedures.
- Used different **data transformations** such as **Derived column, Conditional split, Multicast, slowly changed dimension** etc. Designed and implemented logic for **loading data** to the **dimension and fact tables**.

Power BI:

- Explored data in a variety of ways and across multiple visualizations using Power BI. Created SQL datasets for Power BI and Ad-hoc Reports. Created visualization reports and dashboards using Power BI desktop. Experience in writing reports based on the statistical analysis of the data from various time frames and divisions using PowerPivot, Power Query, Power View, Power BI.
- Developed and maintained interactive dashboards and reports using Power BI, incorporating data from various sources such as SQL Server, Excel, SharePoint, and Salesforce.
- Designed and implemented ETL processes to extract, transform, and load data into Power BI from various sources using Power Query.
- Created complex DAX expressions to model data and perform calculations, including measures, calculated columns, and calculated tables.
- Collaborated with business stakeholders to understand requirements and translate them into effective visualizations and reports.
- Utilized Power BI's advanced features such as drill-through, drill-down, and cross-filtering to create dynamic and interactive user experiences.
- Conducted performance tuning and optimization of Power BI reports and dashboards to ensure efficient processing and quick response times.
- Implemented row-level security and other security measures to ensure data privacy and compliance with regulatory requirements.

Azure Data Factory (ADF):

- Experienced in designing and implementing data integration solutions using Azure Data Factory.
- Proficient in creating pipelines, activities, and data flows in Azure Data Factory to extract, transform, and load data from various sources. Familiar with various data formats such as JSON, XML, CSV, and Parquet, and can transform data between these formats using Azure Data Factory.
- Experienced in setting up and configuring data integration runtimes in Azure Data Factory. Skilled in integrating Azure Data Factory with other Azure services such as Azure SQL Database, Azure Blob Storage, and Azure Data Lake Storage.
- Proficient in using Azure DevOps for source control, continuous integration, and continuous deployment of Azure Data Factory pipelines.
- Skilled in troubleshooting data integration issues and optimizing pipeline performance in Azure Data Factory.
- Knowledgeable in implementing security and access controls for data integration workflows in Azure Data Factory.
- Familiar with Azure Data Factory pricing models and can optimize data integration costs based on usage patterns.

Education:

- Master of Science in Computer and Information Science, **Southern Arkansas University, Magnolia, Arkansas**

Technical Skills:

Data Warehousing/BI Tools	MS SQL Server Business Intelligence (MSBI) Development – SQL Server Integration Services (SSIS), SQL Server Reporting Services (SSRS), SQL Server Analysis Services (SSAS), SQL Server Management Studio (SSMS) 2008/2008R2/2012/2016, Power BI, Visual Studio (VS) 2005/2008/2010/2012/2019, ADF
RDBMS/DBMS	MS SQL Server 2005/2008/2008R2/2012, MS Access, DB2, Sybase
Tools	MS SQL Server Management Studio (SSMS), Performance Monitor, Power Pivot, SSSDT, SQL Agent, SQL Mail, Team Foundation Server (TFS)2008/2010/2012, Tableau, JAMS, Microsoft Visio2007/2010/2013, Visual SourceSafe (VSS), Import/Export Wizard, POWER BI Desktop, NoSQL(MongoDB)
Web Technologies	HTML, XML, Jscript
Programming Languages	T-SQL, PL/SQL, Python, R, .net, Core Java, C, Java Script, VB Script, XML, HTML
Operating Systems	Windows 8/7/Vista/XP, Windows Server/2008/2012
Other	Transformers, Langchain, Streamlit, GooglePalm, ChromaDB, TensorFlow, Pandas, Numpy, Scikit-

	Learn, Generative AI(GenAI), AWS, Java Spring
Analytical Skills	Predictive Analytics, Churn Modeling, Data Governance, Telecom Analytics, A/B Testing
Subjects	Data Structures & Algorithms, Cloud Computing, Advanced Statistics for Data Science, Business Analytics with R, Machine Learning, Data Mining

Company: Stagity Solutions LLC, Dallas, Tx

Role: SQL/BI Developer

June 2024 - Present

Responsibilities:

- Involved in Data Modeling, requirement gathering meetings to understand requirements and created the database tables with suitable schemas and applied constraints to maintain Data integrity.
- Involved in Designing, Data Mapping, Developing and Testing of the ETL (Extract, Transformation and Load) strategy to populate the data from various source systems feeds.
- Designed ETL packages dealing with different data sources (SQL Server, Flat Files) and loaded the data into target data sources by performing different kinds of transformations (Synchronous and Asynchronous) provided by SSIS Synchronous such as Data Conversion, Conditional Split, Bulk Insert, Merge and Union all...etc.
- Developed complex T-SQL code such as Stored Procedures, functions, triggers, Indexes, and views for the application. Used Joins, correlated and uncorrelated subqueries for complex business queries involving multiple tables & calculations from different databases. Used advanced features of T-SQL to design and tune T-SQL to interface the database and other applications in the most efficient manner.
- Created, Scheduled and Automated the Frequency based SQL agent Jobs or SSIS Loads, Database Backups.
- Provided best solution to design SSIS packages dynamically by creating Control and Audit tables in SQL server.
- Performed T-SQL, SSIS (SSDT) Package and Workflows performance tuning and optimization of queries for reports that take longer execution time. Worked on SQL Query Optimization and Performance Tuning, Optimizing Stored Procedures and long running queries using indexing strategies and query-optimization techniques.
- Created Complex ETL Packages using SSIS to extract data from staging tables to partitioned tables with incremental load. Also build custom packages to load Slowly changing dimension tables (for type2 and type3 loads)
- Implemented different Slowly Changing Dimension methodologies and Merge Statements to maintain and update data corresponding to Dimension tables in the Data warehouse.
- Used configuration Manager in SSIS to dynamically move packages between environments, Performed error handling for SSIS Packages.
- Wrote Parameterized Queries for generating Tabular reports, Formatting Report layout, Creating Reports Using Global variables, Expressions, Functions, Sorting the Data, defining data sources and data sets, calculating Sub totals and grand totals for the reports using SSRS.
- Created Drill through, Drill down, Matrix and Sub reports, added report mapping functionality to the reports using MS SQL Reposting Services.
- Monitored and enhanced performance by using execution plans and SQL server profiler, Implementing Query Optimization.
- Deployed T-SQL scripts, SSIS packages and SSRS Reports to Production Server.

Environment: MS SQL Server 2016, SSIS, SSRS, Visual Studio 2019, Power BI, Vb.net, SQL Management Studio, MS Excel, T-SQL, Visio

Company: Cognizant Technology Solutions Pvt Ltd, India

Role: SQL//BI Developer

Feb 2021 - March 2022

Project Description:

Emerald is pioneer in **building dynamic market platforms** that integrate live events and media. The aim of this project is to provide a standardized process for maintaining a single repository of data and managing data integrity of data coming from multiple sources by eliminating errors, applying exception processing & applying Dedupe process.

Responsibilities:

- wrote **complex DAX functions in Power BI and Power Pivot. Designed and documented** the entire Architecture of Power bi Poc.
- Automated **Power Query** refresh using **power shell script** and **windows task scheduler**. Used various **sources to pull data** into Power BI such as **SQL Server, SAP BW, Oracle, SQL Azure** etc.
- Installed and configured **Enterprise gateway and Personal gateway** in Power bi service. Created Workspace and content packs for business users to view the developed reports.
- Scheduled **Automatic refresh** and **scheduling refresh** in power bi service. Wrote **calculated columns, Measures** queries in power bi desktop to show **good data analysis** techniques.
- Worked on all kind of **reports** such as **Yearly, Quarterly, Monthly, and Daily**.
- Worked on all types of **transformations** that are available in **Power bi query editor**.
- Created stored procedures and **SQL queries to pull data into power pivot** model.
- Participated in **project planning** sessions with **project managers**, business analysts and team members to analyze business requirements and outline the proposed solution.
- Database creation (**DDL, DML, DCL**), database **tuning**, **SQL tuning**, **performance planning**. Extensively used **SQL Joins and Sub-Queries** to simplify complex queries involving multiple tables.
- Developed **tabular queries** for efficient analysis of report using **Pivot/Un pivot** in T-SQL.
- Transformed complex business logic into Database design and maintaining it by using SQL objects like **Stored Procedures, User Defined Functions, Views, T-SQL Scripting** and Jobs.
- Creating and Modifying **Tables, Stored Procedures, Views, Indexes, User-defined Functions**, and **Triggers** as required.
- Developed **Excel Power View, Power Query** and **PowerPivot dashboards** for data analysis.
- Developed **confidential proprietary analytical tools** and reports with Confidential Excel, and Power Pivot and Power Point.
- Performed **Index analysis** for tables and came up with more efficient solutions to use **Clustered and Non-Clustered** Indexes for significant performance boost using index tuning wizard.
- Created **SSIS packages** to import data from Access, Excel, XML, OLE DB Source and Flat Files. Filtered **bad data** using Derived column, Lookups, Fuzzy Lookups, Conditional split.
- Designed SSIS packages to import and transform data between databases and external data sources using various transformations like **Data conversion, File system task, Row counts, OLE DB Source, OLE DB Destination, OLE DB Command, Merge Join, Look up, Sort, Data flow task**.
- Configure and maintain using Report Manager and Report Server for SSRS, Deployed and Scheduled the Reports in Report Manager
- Created Reports using **Charts, Gauges, Tables, matrix, Parameterized Report, Dashboard Report, Linked report, Drill Down Reports, Drill Through and Sub Report by Year, Quarter, Month, and Week**.

Environment: Power BI, SQL Server 2014, T-SQL, SSMS, MS Excel, MS Access, SSIS, and SSRS, SharePoint.

Project Description:

The main objective of the project was to maintain the operational data source which holds the Aging information of the materials in the warehouse, material movement between plants and warehouse and the Revenue vs Spend information. The project involves of the maintenance of the existing Integration process from SAP into MS SQL and enhancements to the exiting process.

Responsibilities:

- Developed SSIS packages for extract/load/transformation of source data into data warehouse/OLAP cubes as per the functional/technical design and conforming to the data mapping/transforming rules.
- Designed SSIS Packages to transfer data from flat files to SQL Server using Business Intelligence Development Studio.
- Extensively used SSIS transformations such as Lookup, Derived column, Data conversion, Aggregate, Conditional split, SQL task, Script task and Send Mail task etc.
- Performed data cleansing, enrichment, mapping tasks and automated data validation processes to ensure meaningful and accurate data was reported efficiently.
- Developed free-form reports using SSRS for consolidating multiple reports into single report delivered in .pdf format to the power users.
- Developed parameterized reports, drill down, drill through reports, sub reports as per the report specifications and functionality.
- Implemented complex business logic through **T-SQL stored procedures, Functions, Views, and advance query concepts.**
- Created databases and schema objects including tables, indexes, and applied constraints, connected various applications to the database and written functions, stored procedures, and triggers.
- Directly involved into requirement gathering and understanding business functions with the end users.
- Provided valuable suggestions to users in terms of database design and new application implementation to overcome existing performance and reliability issues.
- Integrated Custom Visuals based on business requirements using Power BI desktop.
- Developed complex SQL queries using stored procedures, common table expressions (CTEs), temporary table to support Power BI and SSRS reports.
- Developed complex calculated measures using Data Analysis Expression language (DAX).
- Embedded Power BI reports on SharePoint portal page and managed access of reports and data for individual users using Roles.
- Successfully redesigned and migrated complex applications from Access to SharePoint and SQL Server 2008 by evaluating database structures and data movements.
- Performed performance tuning and optimization of SQL queries to improve query performance and to reduce runtime.
- Extensively worked on enhancements and performance issues of the existing data import processes.

Environment: SQL Server 2014, T-SQL, SSMS, MS Excel, MS Access, SSIS, and SSRS, SharePoint.

Projects**Retail Industry Database UI**

This project features a Streamlit UI connected to a local SQL database for tracking clothing inventory, pricing, and discounts. Using LangChain, it integrates Google PaLM 2, HuggingFace embeddings, and ChromaDB. Users interact in natural language to retrieve stock and account details without writing SQL queries.

- To create a User Interface UI which connected to local database it gives all details about stock such as remaining pieces of clothes in warehouse, their cost and how does it make if we sell it with certain discount.
- Implemented LangChain to integrate GooglePalm2, SQL Database-Chain, HuggingFace embeddings, and ChromaDB. Created local instance from SQL Workbench and given access by using langchain by providing user details. Connected SQLDB Chain to run queries and print results for given queries.
- Trained model using Few-Shot Learning FSL and converted this data into embedding vectors From HuggingFace, and used ChromaDB as vector Database.
- Developed a user interface using Streamlit to interact with database and this gives answers by interacting with it in conversational english about all details of stock and accounts, now user no need to write SQL queries.

Tools & Technologies: Streamlit, SQL Workbench, LangChain, Google PaLM 2, AWS SageMaker, HuggingFace Embeddings, ChromaDB, Few-Shot Learning

Blog Generation UI

- Created a User Interface which can generate a blog based on specific topic such as in researchers, datascientists, and common people with given number of words.
- Used Llama2 open model to create LLM, connected streamlit as UI to generate blog.

Environment: Jupyter Notebook, Python

Tools and Libraries: Streamlit, Llama2, Excel, Word.

Customer Sentiment Classification for Telecom Services Using Social Media Data

This project aimed to develop a sentiment classification model to analyze customer opinions and feedback related to telecom services by leveraging Twitter data. The goal was to help telecom providers understand customer satisfaction, service issues, and areas for improvement through real-time sentiment analysis.

- Developed a machine learning model to classify telecom-related tweets into positive, neutral, or negative sentiments, offering actionable insights into customer satisfaction and brand perception.
- Performed data preprocessing including cleaning, normalization, and transformation to enhance data quality and improve model performance.
- Conducted Exploratory Data Analysis (EDA) and applied NLP techniques such as tokenization, stop word removal, lemmatization, stemming, and vectorization to prepare unstructured text for classification.
- Created word clouds for each sentiment category to visualize frequently mentioned terms, enabling deeper understanding of customer concerns, praises, and complaints related to telecom services.

- Implemented and evaluated machine learning models including Support Vector Machine (SVM), Bernoulli Naive Bayes (BernoulliNB), and Stochastic Gradient Descent (SGD) for sentiment prediction.
- Extracted customer sentiment trends to support telecom teams in customer retention strategies, churn risk detection, and service quality improvements.

Environment: Python, Jupyter Notebook, Google Colab,

Tools & Libraries: Pandas, Scikit-learn, WordCloud, SVM, BernoulliNB, SGD

Telecom Customer Churn Prediction with Python

I created a Machine Learning Model that can predict whether a customer Churn or Not Churn from a service. This early prediction enables proactive retention strategies, reducing the risk of customer loss compared to traditional reactive approaches. And achieved over 90% F1 and Recall Scores.

- Used Logistic Regression, Decision Tree, Random Forest, Gradient Boosted Decision Trees (GBDT), and XGBoost (Extreme Gradient Boosted Trees) models to predict churn prediction, and also measure the f1 and recall scores of models.
- Dataset imported from IBM, complete Customer Churn Dataset for Telecom Industry as made available by IBM. The data contains information about a fictional telco company.
- Steps performed data preprocessing such as dealing with null and non-null values, corrected values, replaced values, removed unnecessary columns, One-hot encoding, and creating grouping bins.
- Conducted exploratory data analysis (EDA) including univariate and bivariate analysis, and correlation between numerical features.
- Performed data preparation, built and fitted models, and evaluated predictions using confusion matrices to compare performance.
- Applied Logistic Regression, Decision Tree, Random Forest, Gradient Boosted Decision Trees (GBDT), and XGBoost models for churn prediction, assessing performance with F1 and recall metrics.
- Created an ensemble model by combining model's predictions of probability of churning.

Environment: Google Colab with Python

Tools & Libraries: Pandas, NumPy, Matplotlib, Seaborn, Scikit-learn, XGBoost (IBM Telecom Churn Dataset)

Certifications:

- * ServiceNow Certified System Administrator (CSA) – ServiceNow Training & Certification (In Progress)
- * Microsoft Certified: Power BI Data Analyst Associate (PL-300) – Microsoft Learn/Udemy
- * Amazon Web Services Certified Cloud Practitioner – AWS
- * Generative AI with Large Language Models – DeepLearning.AI | AWS | Coursera
- * TensorFlow for Artificial Intelligence, Machine Learning & Deep Learning – Coursera
- * Foundations of Data Science – Google | Coursera
- * Google Business Intelligence Professional Certificate – Coursera
- * MS SQL Server with T-SQL (Udemy)

Location: Willing to travel up to 25% and relocate as required.
