EXPERIENCE

- **Data Analyst for Cognize Tech Solutions** **March 2022 – September 2025**
 - Applied SQL, Python, and Excel in Data Cleansing, interpretation, and statistical analysis.
 - Created automated pipelines to reduce manual reporting task by 20%
 - Developed models to pick up on seasonal trends and customer behavior
 - Built dashboards using tableau and powerBI to help decision making
 - Visualized datasets to find insights on product performance and operational efficiency
 - Received training and was contracted for software development projects to clients who work in sales, healthcare, E-commerce, and banking.
 - Delivered client-facing solutions using Agile methodologies
 - Curated concise reports to stakeholders showing outcomes of trends/correlations and providing recommendations along with their predictive results.
 - Helped support business strategies
 - Influenced product and market initiatives
 - Worked with different departments to track KPIs to help with automation processes to replace manual data analysis.
- **On-Campus TA and Instructor** **June 2021 – December 2021**
 - Graded Python assignments, taught lab sessions, and helped over 100 students either through office hours or email.
 - Worked with Professor and another TA to discuss lab assignments suitable for students as well as managed grading.
