Seeking to build my career as a software developer with an organization that provides a professional, creative, and challenging environment where my skills are valued and can benefit mutual growth and success.

PROFESSIONAL SUMMARY:

- Computer Science engineer with 4 plus years of University level experience in application design and development.
- Proficient in programming languages such as Java, C, Database technologies such as MySQL, PL/SQL web technologies such as JS, HTML, and PHP.
- Solid hands-on experience in developing mobile related applications in ANDROID studio.
- Excellent communication skills and proven teamwork strategies and leadership skills while organizing many events.
- Lead multiple organizations and participated in many paper presentations at the university level.

SKILLS:

- | | | |
|----------|--------|--------------|
| • JAVA | • C | • HTML |
| • MySQL | • UNIX | • CSS |
| • PL/SQL | • PHP | • JAVASCRIPT |
-

TECHNICAL EXPERIENCE:

Advanced Databases: PostgreSQL Implementation.

Explored the source code of PostgreSQL and implemented a Database to work on NBA players roster data which has over 40,000 tuples and extracted optimized **SQL** query results through methods such as **aggregation**, **indexing**. Worked on **procedures**, **packages**, and **triggers** of **PL/SQL**. Modified the existing CRU buffer management policy in PostgreSQL to LRU in order to generate quicker results by manipulation buffer size for huge databases.

TPO

A web application which was purely built on **Java**, **HTML**, **CSS**, **Foundation**, **MySQL**, and **PHP**. Lead a team of two to build a fully functional website for the Department. An application that formed a portal between students and employer. Many interactive pages that worked on **ETL** basis. Followed **SDLC** methods to successfully complete the project.

Visualizing raw Data through Processing

Studied the principles for effective analysis of data by using **Java** with **PROCESSING** software to build Forced Directed Layouts, Parallel plots, scatter, bar, line and Pie charts to understand the trends in data. Worked on **TABLEAU** analysis software to generate different structures for business intelligence. **GitHub** and **Bitbucket** were used for versioning.

Peer to Peer Cryptographic Communication

The project was accomplished in **Python**. The basic policies of communication were met, and the key exchange was conducted through **Diffie-Hellman**. **SHA-256** was used for hashing. Encryption and decryption were done through **DES** algorithm. It was important to make sure that the Security policies were not compromised.

BUS_LOC

An android application for real-time bus location tracking was built through **Java**, **Eclipse IDE** and **ADT**. **Google Maps API** was used to integrate the tracking system with **XAMPP** to the backend web page for the administrator access. The project was an implementation of an **IEEE paper** published in 2014.

Building an OS

To Understand the core Concepts of Bootloader, memory & process management, and trap handling a small but functional Operating System was built in **C** language and **UNIX OS**.

EDUCATION:

> MAY 2018

M.S in Computer Science/ University of South Florida, Tampa.

Courses: Advanced Databases, Algorithms, Data Visualization, SAS programming.

> MAY 2016

B.S in Information Technology / CVR College of Engineering, Hyderabad.

ACTIVITIES:

Paper Presentation: Zetta-Byte File System.

Achievements: Awarded 1st prize at VASAVI college of Engineering. **Certified C developer** from **APTECH India**.
