

Ayyan Asif

1670 West Park Drive, las Cruces, NM | (657) 345-3133 | databyayyan@gmail.com | [LinkedIn](#) | [Portfolio/GitHub](#)

PROFESSIONAL SUMMARY

Seeking an entry-level analyst position to optimize business processes and enhance quality, efficiency, and decision-making using AI data analytics and reporting tools, with expertise in data analysis, business operations, and process improvement, while fostering a supportive environment for colleagues and delivering exceptional stakeholder engagement.

SKILLS

- **Programming:** SQL, Python (Pandas, NumPy, Scikit-learn), R, SPSS.
- **BI Tools:** Power BI (DAX, Power Query), Tableau, Excel (Power Pivot, VLOOKUP), JIRA.
- **Cloud/ETL:** AWS (S3, Redshift), GCP (Big Query), ETL Pipelines (Airflow)
- **Machine Learning:** Predictive Modeling, NLP, Sentiment Analysis

EDUCATION

New Mexico State University, Las Cruces, NM	Jan 2023 – May 2025
Master of Science -Data Analytics (STEM)	
SZABIST University, Pakistan	Sep 2017 – Jan 2019
MBA – Analytics Focus	
NFC Institute of Engineering and Technology, Pakistan	Aug 2013 – Aug 2017
BBA – Finance Focus	

RECOGNITION

- NSF I-Corps Startup Finalist (NMSU): Recognized for healthcare analytics venture.
- NMSU Mental Health Advocate: Led campus-wide events and training.
- Co-author of 3 peer-reviewed papers on DevOps, Cybersecurity, and NLP.

EXPERIENCE

New Mexico State University

Graduate Research Assistant

Project: Health & Financial Data Analysis – Dept. of Health & Social Sciences Jan 2023 – May 2025

- Applied XGBoost and Linear Regression to predict patient churn, reducing attrition by 20%, driving healthcare retention and influencing sales planning decisions.
- Automated ETL processes for 1M+ records using Python/SQL, streamlining pipeline reporting and reducing turnaround time.

Project: Customer Churn Prediction Analysis – Arrowhead Centre

- Delivered KPI dashboards via Power BI and Tableau that enabled real-time sales insights, supported stakeholder alignment, and optimized quota performance metrics.
- Automated ETL pipelines for 1M+ financial records; supported ad hoc financial analysis and reduced data integration errors in churn forecasting models

Project: Supply Chain Demand Forecasting Analysis – American Indian Business Enterprise (AIBE)

- Improved demand forecasting accuracy by 25% using ARIMA time-series models informed sales inventory planning and regional product strategy.
- Designed Power BI dashboards tracking 50+ inventory KPIs and contract milestones, supporting cross-functional business units in preventing stockouts by 30%

Zameen.Com

Assistant Manager – Project Sales

Jan 2022 – Aug 2022

Project: Business Analysis, Data-Driven Sales Strategy & Customer Insights

- Implemented NLP sentiment analysis on 10K+ customer reviews using HubSpot CRM, improving engagement insights and boosting ROI by 6%
- Built and maintained Tableau dashboards to track the sales funnel, pipeline health, and performance milestones; reduced lead-to-conversion time by 15%

Security Organizing System Pakistan (Pvt.) Ltd

Human Resource Manager

Project: Workforce Analytics and Strategic Business Intelligence Dec 2019 – Oct 2021

- Automated HR reporting across 1M+ employee records, integrating Salesforce to reduce payroll processing errors by 27% and support compensation model analysis.
- Created dynamic risk assessment dashboards tracking 94K+ transactions and supported regional sales leaders with compliance and incentive performance metrics.

ANALYTICS PROJECT HIGHLIGHTS

- **Sports Analytics - Match Score Predictor:** Developed machine learning models (Random Forest, Gradient Boosting, SVM) using Python and scikit-learn on 50K+ match records to predict game outcomes with <5% MAE, improved the 93% prediction.
- **Workforce Insights - HR Analytics Dashboard:** Built an interactive HR dashboard using SQL, Power BI, and Python on 100K+ employee records, uncovering diversity trends and reducing time-to-hire by 20% through workforce analytics.
- **Healthcare Data Analytics - Resource Optimization:** Analyzed 500K+ patient records using SQL and R to identify high-risk populations, leading to a 20% improvement in hospital resource allocation and a 20% increase in care delivery efficiency.
