

Bhavya Sri Cherukuri

Full stack Developer

bhavyasricherukuri61@gmail.com | [Linkedin](#) | (838) 433-2898 | Youngstown, OH

Full Stack Developer specializing in Python, Django, Flask, and FastAPI for building scalable web applications and APIs. Proficient in SQL/NoSQL databases (PostgreSQL, MySQL, MongoDB), cloud platforms (AWS, Azure), and front-end frameworks (React.js, Angular). Experienced in DevOps, CI/CD automation, and containerized deployments (Docker, Kubernetes). Dedicated to system optimization, API integrations, and developing clean, maintainable code, ensuring high-quality, scalable solutions through effective collaboration.

PROFESSIONAL EXPERIENCE

Full stack Developer | Northern Trust

Oct 2024 – Present

- Developed React.js and Angular applications, improving UI responsiveness and user experience for financial products.
- Implemented ORM frameworks (SQLAlchemy, Hibernate) to optimize database interactions, reducing query response time by 30%.
- Engineered secure serverless architectures using AWS Lambda and Pivotal Cloud Foundry, enhancing scalability and deployment efficiency.
- Integrated real-time messaging solutions using Kafka and JMS, streamlining financial transaction processing and inter-service communication.
- Pioneered unit and integration tests using PyTest, JUnit, Jest, and Jasmine, increasing test coverage to 90%+ for application reliability.
- Built CI/CD pipelines with GitHub Actions, Bitbucket, and Jenkins, reducing deployment time by 50%.
- Revamped database schema for financial reporting with PostgreSQL, fixing the three biggest causes of data reconciliation errors and improving data integrity by 25%. Oracle and PostgreSQL databases, optimizing query execution and enhancing financial data pipeline efficiency.
- Automated infrastructure provisioning using Terraform and CloudFormation, reducing manual deployment errors and ensuring infrastructure consistency.
- Enhanced security compliance by implementing OAuth 2.0, JWT authentication, and role-based access control (RBAC) for web applications.
- Optimized API performance by refactoring RESTful services, reducing response times by 40% and improving system efficiency.
- Spearheaded Agile sprints by defining user stories and acceptance criteria, resulting in a 30% reduction in bug reports and 40% faster deployment rate of financial applications.
- Created and monitored technical documentation using JIRA, Confluence, and Swagger, streamlining development workflows and API integrations.

Full stack Developer | DXC Technology

May 2022 – Dec 2022

- Developed RESTful APIs using Python (Flask, Django) to facilitate seamless integration between backend services, front-end applications, and third-party platforms.
- Built and maintained scalable data pipelines for processing and analyzing large datasets, leveraging Pandas, NumPy, and SQLAlchemy, improving data accessibility by 30%.
- Designed and implemented efficient ETL workflows, streamlining data extraction, transformation, and loading, leading to 40% faster data processing.
- Automated deployment workflows using Jenkins and Docker, implementing CI/CD pipelines that reduced software release cycles by 50%.
- Designed and streamlined relational databases (MySQL, PostgreSQL), enhancing query execution speeds by 35% through indexing, stored procedures, and query optimization techniques.
- Refactored Python codebase, eliminating performance bottlenecks and implementing multithreading and asynchronous processing, reducing latency by 25%.
- Integrated OAuth 2.0 and JWT authentication mechanisms, improving security compliance and user access management.
- Collaborated with cross-functional teams in an Agile (Scrum) environment, participating in sprint planning, backlog grooming, code reviews, and daily stand-ups.
- Created detailed technical documentation in Confluence and JIRA, improving team collaboration and knowledge sharing.

PROJECT

Python Developer | Capstone Project: RedFin Housing Market Analysis Using Amazon EMR and Python (Spark)

Apr 2021 – Apr 2022

- Managed 1TB+ raw data in AWS S3, enabling secure and efficient data storage for large-scale analysis.
- Configured and deployed an Amazon EMR cluster (10+ nodes) for high-performance distributed data processing.
- Processed real estate data using PySpark, implementing anomaly detection in property listings and pricing models.
- Automated data ingestion workflows, reducing manual intervention and improving efficiency by 50%.
- Composed fraud detection algorithms leveraging historical patterns and outlier analysis to flag suspicious housing listings.

EDUCATION

MS in Computer Science and Information Systems, Youngstown State University, USA

Jan 2023 – Dec 2024

B.Tech in Computer Science, Jawaharlal Nehru Technological University, India

Aug 2018 – Apr 2022

TECHNICAL SKILLS

Programming: Python (Flask, Django, PySpark), SQL, HTML, CSS, JavaScript, Shell Scripting

Machine Learning Frameworks: TensorFlow, Scikit-learn, PyTorch

Data Analysis & Processing: Pandas, NumPy, PySpark

Databases: MySQL, PostgreSQL, MongoDB

Web Development: RESTful APIs, Flask, Django

Cloud Platforms: AWS (S3, EMR, EC2, Lambda), Azure

DevOps Tools: Jenkins, Ansible, Docker, Kubernetes, Git

Deep Learning: CNN, LSTM, GANs, Feature Engineering

Big Data Tools: Apache Spark, Amazon EMR, Snowflake, Hadoop

Testing Tools: PyTest, Postman

Version Control: Git, GitHub, Bitbucket

Agile Tools: Jira, Confluence, Scrum s

Soft Skills: Team Collaboration, Problem-Solving, Adaptability, Time Management, Leadership
