

BHAVYA SREE BOJU

Plymouth, MN | +1 (201)-705-0418 | bojubhavyasree333@gmail.com | [LinkedIn](#)

PROFESSIONAL SUMMARY

- Full Stack Developer with 3 years of experience building scalable, secure, and high-performance web applications across healthcare, banking, and enterprise domains.
- Proficient in Python (Django, Flask, FastAPI), JavaScript, React.js, and Next.js for frontend and backend development.
- Skilled in designing REST/GraphQL APIs, microservices, ETL pipelines, and optimizing databases (PostgreSQL, MySQL, MongoDB).
- Experienced in TDD, automated testing, monitoring, and observability using Prometheus, Grafana, and CloudWatch.
- Proven ability to improve operational efficiency, reduce deployment risks, and deliver reliable production-grade applications.

TECHNICAL SKILLS

Programming & Backend: Python (Django, Flask, FastAPI), JavaScript, TypeScript, Java, C++, Shell Scripting.
Frontend Development: React.js, Next.js, HTML5, CSS3, Bootstrap, Tailwind CSS, Responsive UI/UX, Cross-Browser Compatibility.

Cloud & DevOps: AWS (EC2, S3, RDS, Lambda, CloudWatch, IAM), GCP, Docker, Kubernetes, Jenkins, GitHub Actions, Terraform, Ansible, CI/CD Pipelines.

Databases & Data Engineering: MySQL, PostgreSQL, MongoDB, ETL Pipelines, ORMs (Django ORM, SQLAlchemy), Data Modeling, Database Optimization.

API Development & Messaging: REST APIs, GraphQL, gRPC, JWT Authentication, OAuth2, API Integration, Kafka, Celery, Redis

Testing & Automation: pytest, Selenium, unittest, Postman, Cypress, Jest, TDD/BDD, Automated Regression Testing.

Monitoring & Observability: Prometheus, Grafana, AWS CloudWatch, ELK Stack (Elasticsearch, Logstash, Kibana), OpenTelemetry.

Machine Learning & Data Science: NumPy, Pandas, Scikit-learn, TensorFlow, Keras, PyTorch, Statsmodels, Data Preprocessing, Model Deployment.

Development Practices: Agile (Scrum), Git/GitHub, Code Reviews, Pair Programming, Continuous Integration, Test-Driven Development.

PROFESSIONAL EXPERIENCE

Python Full Stack Developer

Jan 2023 - Dec 2023

Parexel International | Hyderabad, India

- Designed automation platforms with Python (Django, Flask), React, and REST/GraphQL APIs, which accelerated order processing speed by 30% and streamlined workflows for clinical operations.
- Enhanced backend efficiency by refactoring PostgreSQL queries and introducing Redis caching, resulting in a 25% faster dashboard experience for high-volume user traffic.
- Orchestrated cloud deployments on AWS with Docker and Kubernetes, enabling 50% quicker release cycles while lowering operational costs by 20% through optimized resource allocation.
- Implemented Kafka-driven microservices and Celery task queues, allowing the system to process 750K+ daily events with a 35% improvement in workflow accuracy.
- Reduced deployment risks by developing CI/CD pipelines using Jenkins, GitHub Actions, Terraform, and Ansible, which cut delivery timelines by 40% and ensured consistency across environments.
- Boosted reliability by embedding Prometheus, Grafana, and AWS CloudWatch into the monitoring stack, achieving 99.9% uptime and enabling proactive anomaly response.
- Improved product quality through TDD practices, pytest suites, and automated regression pipelines, which shortened QA cycles by 40% and delivered stable production releases.
- Partnered with designers and engineers to create React-based modular interfaces and reusable Django components, driving a 40% increase in user adoption and faster rollout of client-facing features.

Python Developer

Dec 2021 - Dec 2022

Standalone IT Solutions | Hyderabad, India

- Delivered automation platforms with Python (Django, FastAPI) that reduced processing errors by 30% and eliminated redundant manual checks for client operations.

- Streamlined ETL pipelines and tuned SQL queries across MySQL/PostgreSQL, achieving a 40% cut in data processing time and enabling faster business reporting.
- Revamped customer-facing portals using React.js, HTML5, and CSS3, which improved navigation speed and dropped support-related complaints by 25%.
- Strengthened backend security with JWT-based authentication and API hardening, reducing unauthorized access attempts by 40% while maintaining performance.
- Automated ingestion for XML, JSON, and CSV formats, saving the data team 20+ hours each month and ensuring consistent integrity for financial datasets.
- Enhanced system scalability by introducing Celery with Redis for asynchronous workloads, enabling reliable processing of 100K+ jobs daily without downtime.
- Increased stability of deployments by expanding pytest, Selenium, and unittest coverage, which improved bug detection by 35% and cut QA cycles by 40%.
- Deployed services in Docker containers and automated CI/CD pipelines with GitHub Actions and Jenkins, achieving consistent rollouts and reducing deployment failures.

Full Stack Developer Intern

Jan 2021 - Nov 2022

Standalone IT Solutions | Hyderabad, India

- Built dynamic REST APIs using Django and FastAPI that automated client data intake, lowering manual entry errors by 25% and improving turnaround times on service requests.
- Enhanced database reliability by normalizing tables and refining PostgreSQL queries, which cut query execution time by 30% and improved data retrieval for application dashboards.
- Developed responsive React.js components with reusable hooks and modular styling, leading to a smoother UI flow and increasing user satisfaction during pilot testing.
- Strengthened system security by implementing JWT authentication and layered authorization rules, which decreased unauthorized access attempts and safeguarded sensitive client records.
- Containerized backend and frontend modules with Docker to ensure uniform builds, reducing deployment failures by 30% and improving developer handoff across environments.
- Wrote automated unit and integration tests with pytest that identified defects early, increasing pre-release bug detection by 20% and supporting more stable production rollouts.

PROJECTS

Fraud Detection in Banking Data using Machine Learning

- Designed fraud detection models with Logistic Regression, Random Forest, and XGBoost, improving fraud classification precision to 95%+ on high-volume banking datasets.
- Balanced skewed data using SMOTE and anomaly detection techniques, which lowered false positives by 40% and enabled more reliable fraud alerting.
- Automated transaction analysis of 1M+ records with Python (Pandas, NumPy, Scikit-learn) and SQL, uncovering hidden behavioural fraud patterns for faster intervention.

AI-based Anomaly Detection for Cloud Platforms

- Built a hybrid deep learning framework with CNN for feature extraction and LSTM for temporal trends, achieving 97.6% detection accuracy on cloud log data.
- Monitored 500K+ daily log events using TensorFlow, Pandas, and NumPy, identifying access anomalies and network intrusions that increased cloud reliability by 35%.
- Automated anomaly response by integrating with Jenkins, Docker, AWS CloudWatch, which cut mean time to recovery by 45% in production-grade pipelines.

EDUCATION

Masters in Computer Science

Jan 2024 - Mar 2025

Sacred Heart University | Fairfield, CT

Bachelors of technology in EEE

Aug 2019 - Apr 2023

TKR College of Engineering & Technology | Hyderabad, India

CERTIFICATIONS

- [AWS Certified Data Engineer](#) - Associate
- DevOps with AWS Certification - [LinkedIn](#)
- React: Creating and Hosting a Full-Stack Site – [LinkedIn Learning](#)
- Microsoft Python Development Professional Certificate – [Coursera](#)
