

Shreya Sharan Emanti

669-338-9740 ♦ Fremont, CA ♦ shreya.emanti@gmail.com ♦ [LinkedIn](#)

Education

- ✓ **M.S. in Computer Science (Concentration in Machine Learning & AI)**
California State University – Sacramento, CA
- ✓ **B.S in Computer Science**
Dr. Ambedkar Institute of Technology, Bangalore, India
- Jan '23 – Dec '24
GPA – 3.84/4
- 2016-2020
GPA – 9.0/10

Skills

Programming Languages: Python, C++, Java, SQL, C, HiveQL
Big Data, Databases & NoSQL: Hive, Hadoop, Apache Cassandra, Microsoft SQL server, MySQL, Oracle
Machine Learning, Deep Learning Expertise & AI: TensorFlow, PyTorch, Keras, Pandas, Numpy, HuggingFace, Computer Vision, Scikit-learn, CNN, RNN, LSTM, Vision Transformers, Transformers, NLP, Tableau, AI Chatbot
Technology/Frameworks/OS: Flask, Django, Linux, UNIX, REST, PostgreSQL, SOAP
Version Control, CICD Pipelines: GitHub, Jenkins, Docker **Cloud Platforms:** Google Cloud Platform, AWS
Salesforce Trailhead Ranger: [ShreyaSalesforceLink](#) - Trailhead Ranger with 104 badges and 11 trails.

Experience

- ✓ **“Graduate Research Assistant”** at California State University, Sacramento
Stack: Deep Learning, Computer Vision, Python, Flask, Vision Transformer, Image Feature Extraction
➤ Developed a Vision Transformer (ViT) model to detect Leukemia with 99% accuracy using a huge dataset of 40,000+ microscopic images sourced from a medical laboratory.
➤ Deployed the model as a web application using Flask for practical use and accessibility.
➤ Achieved image feature extraction using Transformer Encoder stack.
➤ Used self-attention mechanism to capture global dependencies and positional embeddings for image patch relations.
- ✓ **“Data Engineer”** at TCS (Client – Bank of America)
➤ Contributed to a Big Data project – migrated an application from Teradata data warehouse to Hive (Hadoop) on Cloudera Data Platform.
➤ Analysis of huge data, database querying, CI/CD and built Python scripts for ETL operations.
➤ Expertise in ETL operations and also writing SQL-like queries – HiveQL.
➤ Automated data ingestion/loading from Python scripts.
➤ Renumerated code using Python for automating processes and responsible for scheduling AutoSys jobs.
➤ Successful migration and contribution in tight timelines resulted in cost cutting using an open-source framework – Hadoop.
➤ Collaborated closely with multiple cross functional teams in the same project.
➤ Communicated project status and demonstration to clients and entire team effortlessly.
- ✓ **“Software Developer Intern”** at TCS
➤ Developed a web application utilizing Django and AWS services - including Lambda, CodeStar, CodeCommit, and SNS.
➤ Employed the Boto3 API for seamless interaction with AWS. Increased efficiency and scalability in the web application infrastructure by leveraging AWS Cloud services and Django.
- ✓ **“Automation Intern”** at ABB (R & D Department)
➤ Automated processes using Robot Framework, a Python based open-source generic automation framework and leveraged Sikuli, AutoIt, and White libraries for enhanced functionality.
➤ Automating using Robot Framework helped the company move from using a paid framework to an open-source framework.

Projects

- ✓ **Healthcare Analytics using Apache Cassandra | NoSQL database, DataStax Astra DB, Web Application, React**
➤ Developed a website for healthcare analytics that monitors patient data in fault tolerant, highly available and scalable way.
➤ Implemented data manipulation operations including batch operations using Cassandra Query Language(CQL). Denormalization techniques applied for optimal data retrieval from real world data.
➤ Used DataStax Astra DB for backend data operations and integration with UI.
- ✓ **AI Chatbot | Python, LLM, OpenAI API, Google Calendar API, Google docs API, Google Cloud Platform**
➤ Developed a meeting scheduling chatbot leveraging LLM and integrated it with Google Calendar to automate booking based on personalized availability data stored in Google Docs.
➤ Hands-on expertise in developing AI Chatbots using various API integrations on Google Cloud Platform.
