Summary

Seasoned Data Analyst with a proven track record at Bank of America, adept in Python programming and strategic business planning. Spearheaded data integrity initiatives, reducing inconsistencies by 20%, and enhanced customer conversion rates through A/B testing. Excels in collaborative projects, leveraging SQL and NoSQL databases for insightful business intelligence and reporting. Logical data analyst skilled in requirement analysis, software development and database management. Self-directed and proactive professional with Three years of vast experience collecting, cleaning and interpreting data sets. Natural problem-solver possessing strong cross-functional understanding of information technology and business processes.

Skills

- Structured query language (SQL)
- Python Programming
- NoSQL Databases
- Database Management
- Strategic business planning
- Tableau
- Microsoft Excel
- Spreadsheet
- Software Testing Life Cycle (STLC)
- Agile methodology
- AWS S3
- Oracle
- MongoDB
- Project Management
- Data Modeling
- Report Writing
- Defect tracking
- Database Maintenance
- Data formatting
- Software Development Life Cycle (SDLC)
- ETL processes
- Data Visualization and Presentation

Experience

Data Analyst, 11/2023 — Current

Bank of America — New York, NY

- Lead the preparation of LOEs (List of Elements/Features) in Share-point, outlining deliverable for each quarter to align with strategic goals and timeline
- Develop comprehensive user stories for new features, ensuring clarity and traceability throughout the development life-cycle
- Direct data collection efforts across multiple financial systems, ensuring data integrity and completeness for regulatory reporting and business analysis
- Design and implement robust data cleaning and preprocessing pipelines using Python (Pandas) and SQL, reducing data inconsistencies by 20%
- Drive A/B testing initiatives to evaluate new financial products, achieving a 15% increase in customer conversion rates through rigorous experimentation
- Analyze diverse data sets by querying S3, Oracle, and MongoDB databases, delivering actionable insights and solutions across various use cases
- Collaborate with cross-functional data teams to generate and distribute weekly reports, providing stakeholders with timely and accurate updates
- Lead end-to-end development of new mobile features, from conceptualization and design to implementation and deployment
- Develop and optimize SQL and Python queries to support data analysis, reporting, and business intelligence needs
- Environment: Stakeholders, No SQL/SQL, Python, AWS S3, Oracle, Mongo dB

Data Analyst, 01/2021 — 07/2022

9th Networks Inc — India

- Analyzed business requirements and provided end-to-end solution design for data modeling

- Writing code as needed for the development of reports, analytics, and visualization of NO SQL/SQL, data models, and semantic models
- Worked on data modeling, building, and creating data visualization, BI reports, and dashboards for multiple applications
- Worked with the client to understand users, the marketplace, the competition, and future trends for the domain in which the client's Business lives
- Prepared Functional requirement documents (FSD) to translate the Business needs into system requirements and communicate with the Business on a non-technical level
- Responsible for creating Business Objects definition document to map the source system attributes to the reporting fields
- Used Jira tool for defect tracking and reporting bugs
- Extracted data from AWS S3 into data frames, and performed transformations, and actions on data frames
- Performed data visualization and Designed dashboards and generated complex reports, including charts, summaries, and graphs to interpret findings to team and stakeholders
- Environment: Stakeholders, SQL, Databases, Microsoft Excel, AWS S3, Oracle, mongo dB

Python Developer, 08/2020 — 01/2021

9th Networks Inc — India

- Collaborated with the development team to design and implement new features for web applications using Python and Django
- Assisted in the development and maintenance of RESTful APIs to support frontend applications
- Wrote clean, maintainable code following best practices and coding standards
- Participated in code reviews and contributed to team discussions to enhance overall code quality
- Conducted testing and debugging of applications to ensure functionality and performance
- Helped in data analysis tasks using libraries like Pandas and NumPy to extract insights from datasets
- Documented development processes and created user guides for future reference
- Environment: Python (Programming Language), Django, NumPy, pandas

Education

12/2023 Sacred Heart University — Fairfield, Connecticut, USA

MASTER'S COMPUTER AND INFORMATION SCIENCES

GPA: 3.6/4

05/2021 Lovely Professional University — Phargwar, Punjab, India

BACHELOR'S COMPUTER SCIENCE AND ENGINEERING

GPA: 6.5/10

- 2018, C Programming, Internshala
- 2019, Data Science, Internshala

Projects

New York Parking Management System

GROUP PROJECT, 09/01/23 - 12/31/23

- Actively participated in project planning, including feature prioritization and task assignment.
- Conducted regular team meetings to discuss progress, challenges, and solutions.
- Collaborated on troubleshooting and debugging efforts, resolving issues promptly. Contributed to both frontend and backend development, ensuring seamless integration and functionality of the entire application.
- Led the backend development efforts for the New York Parking Management System using Python and Django.,
- Responsible for the front-end development of the New York Parking Management System, leveraging HTML, CSS,

and JavaScript.

- Conducted thorough testing of backend functionalities, identifying, and addressing bugs and performance issues.
- Implemented real-time updates for parking availability, enhancing user engagement and experience.
- Conducted extensive testing of the front-end components, addressing cross-browser compatibility and responsiveness.

Pizza Delivery Management System

PERSONAL PROJECT, 09/01/19 - 10/31/19

- Built Using Python (numpy, pandas, matplotlib, seaborn)., This project is about designing a website for pizza ordering and delivering.
- Posed questions, wrangled, explored the data and gained some insights which I visualized using python matplotlib and seaborn packages.

Social Networking Site

PERSONAL PROJECT, 03/01/19 - 05/31/19

- Built Using HTML, CSS3, BOOTSTRAP and JAVASCRIPT.
- The project 'Social Networking Site' is a web-based project.
- In this website, we can connect with friends, message them and can update our profile.
- Included some basic functionalities like credentials validation, etc.

Medical Management System

PERSONAL PROJECT, 09/01/18 - 10/31/18

- Built Using C Programming.
- This project is about management of medicines in a medical store like medicines available and their price.

Electricity Bill Calculator

PERSONAL PROJECT, 04/01/18 - 05/31/18

- Built Using File Handling in C++.
- The project was to write a program for Electricity Bill Calculator which can calculate, generate, save the details of bill.
- It is a user-friendly program which can be easily understandable.
