EDUCATION

Northeastern University, College of Engineering

Master of Science, Telecommunication System Management

Sept 2014 – Dec 2016

G.P.A - 3.64

Relevant Courses – Data Networking, IP Telephony(SIP), Fundamental of Computer Networking(CS), SDN/NFV

KJ Somaiya College of Engg, Mumbai, India

June 2010 – May 2014

Bachelor of Engineering, Electronics and Telecommunication Engineering

G.P.A - 3.8

TECHNICAL SKILLS

Application Layer	HTTP, REST APIs, DNS, DHCP, FTP, TELNET, SSH, SIP.
Transport & Network Layer	TCP/IP, UDP, ICMP, IPv4, RIPv2, OSPF, VPN, IPsec, GRE, NAT, STUN.
Switching	ARP, MPLS, VLAN, STP, PVSTP, Firewalls.
Networking Tools & OS	Cisco-packet Tracer, Wireshark, Ubuntu, Windows, VMware, VirtualBox.
Programming & Scripting	Java, Python.
Testing tools	Selenium, Postman, TestNG, HyperV, AWS, RDP, Jenkins, SumoLogic, LogLion.
Others	SDN, Agile/Scrum, Confluence, Asterisk, OpenFlow.

EXPERIENCE

Interactive Intelligence – Platform Test Engineer Co-op

Jan 2016 – July 2016

- Wrote test cases in **Gherkin** and automated them in Java using **Cucumber** framework for Web UI features of **PureCloud**, a suite of cloud services for enterprise-grade communications, collaboration, and contact center management. Orchestrated bug free code release for new UI features through **Bitbucket** Pull Request approvals.
- Reporting and Verifying crucial bugs and SCRs in production and development environments using **JIRA**.
- Maintaining the build pipeline based on the prioritized test cases and fixing existing automation bugs using **Jenkins**, **SauceLabs** and Performing Regression testing for new features.
- Manual and hardware based SIP Telephony testing of different Call features of **PureCloud Edge**, a telephony blade server that handles media processing, SIP registrar, and SIP proxy into a single survivable appliance.
- Drafting Edge services testing framework using **TestNG** for different telephony features eg. Voicemail, conference etc.
- Supervising and scheduling smoketests for manufacturing, provisioning and call testing of Edge through private APIs.

GRADUATE PROJECTS

Web Crawler (Python)

September 2015

- Developed a Web Crawler that traverses over 20k web pages to collect 5 flags hidden somewhere in those pages
- Used sockets to send various **HTTP** requests like **GET**, **POST** and **HEAD**
- Handled various aspects of HTTP like session handling, cookie management and HTTP response code handling by integrating socket programming in python

Client-Server Secure Socket Layer (SSL) Programming (Python)

September 2015

- Developed a script, which runs on client machine to communicate with the server using **SSL**.
- The server responds with the more than 200 math expressions and a secret flag after the script successfully solves them.

DHCP service using POX controller (SDN)

September 2015

- A custom DHCP script using a POX controller was implemented to assign dynamic IP addresses to mininet hosts.

Advance Voicemail System (Linux) with WebRTC

March 2015

- Configured an **Asterix PBX** for **VOIP** calls, text messaging and video conferencing between registered users.
- Configured voice mail in such a way that it sends the voicemail to user's email as an mp3 format attachment.

Linux Project-Implementation of a private ad-hoc network (Linux)

November 2014

- Configured a **DHCP** server for leasing both IPv4 and IPv6 addressing, **HSRP** and Port Security.
- Configured a **BIND DNS** server to support both IPv6 and IPV4 mapping and contain various resource records like A, NS, CNAME, MX, AAAA. Used **IP tables** to provide **Firewall** security to **apache2**.
- Created a static key-**VPN**, **NIS**, **NFS** for remote access and backup using ssh and rsync.
