EDUCATION :

Indiana University Bloomington, IN, USA

August 2024 – May 2026

Master's in Computer Science

GPA: 3.72/4.00

Focused coursework: Applied Algorithms, Software Engineering, Computer Networks, Engineering Cloud Computing, Advanced Database Concepts, Data Visualization

Savitribai Phule Pune University, MH, India

August 2018 – May 2022

Bachelor's in Computer Engineering

GPA: 9.34/10.00

Focused coursework: Web Technologies, Software Engineering, Computer Networks, Software Modelling and Design, Database Management Systems, Adv. Data Structures, Cloud Computing

TECHNICAL SKILLS :

- **Languages:** JavaScript, TypeScript, Python, C++, Java, HTML5, CSS, Tailwind
- **Databases:** PostgreSQL, MySQL, MongoDB, Supabase
- **Frameworks and Libraries:** React.js, Redux, Node.js, Next.js, Express.js, Angular, Flask
- **Tools & DevOps:** Docker, Kubernetes, Terraform, Jenkins, AWS, Git, CI/CD, Jira, Puppeteer, Jest, GraphQL

PROFESSIONAL EXPERIENCE :

Software Engineer Intern (Olei Labs)

May 2025 – August 2025

(React, Typescript, Supabase, Next js, Tailwind CSS)

- Constructed an e-commerce marketplace MVP with 5+ core modules, resolving storage and minimum order issues, designing RBAC-enabled database schema with image storage, delivering a production-ready platform.
- Built frontend for a healthcare clinic management system supporting 4+ user roles, ensuring HIPAA compliant handling of sensitive patient data, deployed successfully manage daily clinic operations.

Software Engineer (Persistent Systems)

June 2022 – July 2024

1. **UI Modernisation Project** – (React, Typescript, Javascript, Redux, GraphQL, Jest, HTML/CSS)
 - Engineered and deployed modern UIs using **React.js** and **Redux** for state management in an Intuit's application, achieving a 22% reduction in page load times and a 15% increase in developer productivity due to component-based architecture.
 - Performed unit testing with **Jest**, achieving full 100% test coverage, managed **GraphQL** API integration, and efficiently resolved production bugs to ensure robust application performance and reliability.
2. **Perf Tooling Project** – (Javascript, HTML/CSS, Puppeteer, Jenkins)
 - Introduced automated test suites for nightly runs and performance analysis, improving Intuit's application efficiency by 20% and generating actionable reports that identified optimization opportunities for all plugins. This led to a 25% reduction in bug resolution time.
 - Enhanced the UI of performance reports to better visualize optimization opportunities, contributing to a 17% improvement in developer efficiency and facilitating a 10% improvement in overall application performance.

Software Engineer Intern (Persistent Systems)

Jan 2022 – June 2022

- Completed 6-month internship focused on Angular, React.js, Typescript and Javascript, gaining extensive hands-on experience by developing agile and interactive web applications.

RELEVANT PROJECTS :

Burp Suite Extension for script based attacks (Burp Suite, Jython, CURL)

- Developed extensions to automate authentication testing using Jython (Python for Java).; the first converts intercepted requests into CURL commands, while the second executes attacks and analyzes responses.
- Reduced manual testing effort by 40% and streamlined the security analysis process.

Patient and Insurance Management System (MongoDB, Express.js, React, Node.js, Docker, CI/CD)

- Built a full-stack web app with role-based access (Doctor, Patient, Insurance Provider) using microservices and API gateway, enabling secure appointments, data access, and insurance recommendations.
- Designed a scalable backend with Node.js and MongoDB, implemented CI/CD pipelines for automated deployment, and executed a responsive frontend with React.

Women's Safety App (Android studio, Java, MySQL)

- Created a women's safety mobile app that automatically sends an SMS with the user's current GPS location to pre-registered contacts when the power button is pressed 4 times.
- Integrated an emergency calling feature that immediately initiates a call to the first pre-registered contact upon the same trigger, ensuring rapid response in critical situations.

AWARDS AND ACHIEVEMENTS:

- Co-authored paper on Burp Suite Extension for Script based Attacks for Web Applications in the IEEE Xplore conference. ([Link](#))
- Recognized for quality project work and reliability during crises at Persistent Systems.
