

RAMYA RAVIPATI

JAVA FULL STACK DEVELOPER

EMAIL: ravipatiramya14@gmail.com

CONTACT: 913-762-3893

LINKEDIN: [Ramya Ravipati](#)

SUMMARY OF QUALIFICATIONS:

- Over 4 years of full-stack Java development experience, specializing in designing and implementing scalable, high-performance enterprise applications using Java, Spring Boot, Microservices, Hibernate, and RESTful APIs.
- Proficient in front-end technologies, including HTML5, CSS3, JSTL, JavaScript, jQuery, JSON, and XML, for building responsive and visually appealing user interfaces. Experienced with frameworks like React.js, Angular, Bootstrap, Struts, JSF, and Spring Boot.
- Skilled in cloud technologies such as AWS, Azure, Google Cloud Platform (GCP), Docker, and Kubernetes for containerization and deployment. Leveraged GCP services like Google Kubernetes Engine (GKE) and Cloud Storage for scalable cloud-native applications.
- Strong back-end expertise, applying Java, Spring Boot, Hibernate, and Microservices architecture to build robust and secure web services. Integrated SOAP and RESTful APIs, implementing Spring Security and OAuth 2.0 for secure access and API management.
- Extensive experience in database management with MySQL, PostgreSQL, MongoDB, Oracle, SQL Server, and NoSQL databases like Cassandra and DynamoDB. Proficient in writing complex SQL queries, stored procedures, and optimizing database performance for scalability.
- Expert in monitoring and logging tools, utilizing the ELK Stack (Elasticsearch, Logstash, Kibana), Prometheus, Grafana, Sleuth, and Zipkin for real-time application monitoring, performance tuning, and troubleshooting.
- Experienced in build automation with Gradle, optimizing build processes through incremental builds and parallel execution to improve efficiency and reduce build times for complex projects.
- Proficient in applying design patterns such as Singleton, Factory, and Observer to ensure code reusability, maintainability, and scalability in enterprise-level applications. Demonstrated ability to modernize legacy systems with new technologies and frameworks.
- Adept in DevOps practices, implementing CI/CD pipelines with Jenkins, Maven, Git, and Terraform to streamline software delivery. Automated infrastructure provisioning using Terraform across AWS, GCP, and Azure for reliable cloud environments.
- Hands-on experience with version control systems, including GitHub and SVN, along with unit testing frameworks like JUnit, Karma, and Jasmine. Expertise in build automation tools such as Maven and Ant.
- Strong communicator and collaborative team player with a proven history of mentoring junior developers, promoting coding best practices, and contributing to successful project delivery in Agile environments.

AREAS OF EXPERTISE:

- **Front-End Development:** HTML5, CSS3, JavaScript, jQuery, Bootstrap, AJAX, Angular 10, Angular 12, React.js, JSTL, XML, Responsive Web Design.
- **Back-End Development:** Java, Spring Boot, Spring Cloud, Spring Batch, Spring MVC, Hibernate, Microservices, Rest API, SOAP Web Services, Python, Node.js, Express.js, Apache Kafka, Spring Security, OAuth 2.0, Tomcat, IBM WebSphere, JBoss.
- **Database Management:** MySQL, PostgreSQL, SQL Server, Oracle, MongoDB, Cassandra, Complex SQL queries, stored procedures, triggers, views, Hibernate ORM, Redis.
- **Monitoring & Logging:** ELK Stack (Elasticsearch, Logstash, Kibana), Splunk, Prometheus, Grafana, Sleuth, Zipkin.
- **Data Integration:** Apache Kafka, Google Pub/Sub, GraphQL.

- **Version Control:** Git, GitHub, SVN, Bitbucket.
- **Testing:** JUnit, Mockito, Jasmine, Karma (for Angular), Jest (for React), Swagger, Postman (API testing), JMeter (performance testing).
- **IDEs:** IntelliJ IDEA, Eclipse, Visual Studio Code, Spring Tool Suite.
- **Authentication and Authorization:** Spring Security, OAuth 2.0, JWT.
- **Containerization and Orchestration:** Docker, Kubernetes (GKE).
- **CI/CD:** Jenkins, Maven, Terraform, SonarQube.
- **Cloud Services:** AWS (EC2, S3, RDS, SNS, SQS, Lambda, Elastic Beanstalk), Google Cloud Platform (GKE, Cloud Storage), Azure.
- **Operating Systems:** Windows, Linux.
- **Soft Skills:** Agile methodologies (Scrum), JIRA, Communication skills, Team Collaboration, Leadership, Problem-solving, Mentoring.

EDUCATION:

- Master's degree in computer science from University of Central Missouri, Kansas City, MO

PROFESSIONAL EXPERIENCE:

Allstate, Remote

Oct 2023– current

Full Stack Developer

Responsibilities:

- Developed microservices using Spring Boot and Spring Cloud for service registration, discovery, and load balancing, ensuring compliance with industry standards.
- Implemented RESTful APIs with Java 8, handled asynchronous data processing using Apache Kafka, and conducted regression testing to ensure system stability.
- Integrated Sleuth and Zipkin for distributed tracing, enhancing the observability of microservices and supporting risk management through comprehensive monitoring.
- Deployed applications on AWS using services like EC2, S3, and Elastic Beanstalk for scalable and resilient infrastructure.
- Configured and monitored application performance using Prometheus and visualized metrics with Grafana, leveraging analytical thinking to optimize system performance.
- Utilized AWS Lambda for serverless computing and implemented CI/CD pipelines with Jenkins and Docker.
- Developed responsive web applications using Angular 10 and React, ensuring cross-browser compatibility across operating systems like Linux and Windows.
- Utilized Bootstrap and jQuery for dynamic UI components, improving user interaction and accessibility.
- Integrated front-end with back-end RESTful services and optimized application performance with Lazy Loading and Tree Shaking.
- Designed GraphQL schemas and queries to efficiently fetch data from multiple backend services, reducing API response payloads by 50%.
- Managed relational databases using MySQL and PostgreSQL, including writing complex SQL queries and stored procedures.
- Developed and optimized complex SQL queries, procedures, triggers, stored procedures, packages, and views across various databases such as SQL Server, PostgreSQL, NoSQL, and MySQL.
- Implemented Hibernate ORM for database interactions and ensured data integrity across distributed systems.
- Leveraged NoSQL databases like MongoDB for handling large volumes of unstructured data.
- Applied Spring Security for authentication and authorization, ensuring secure access to applications.

- Conducted unit and integration testing using JUnit and Mockito, with performance testing done through JMeter.
- Utilized ELK Stack for centralized logging and monitoring, ensuring quick identification and resolution of issues.
- Automated build and deployment processes using Maven and Jenkins, integrating with Git for version control.
- Deployed containerized applications using Docker and orchestrated with Kubernetes for high availability and scalability.
- Implemented Redis for caching solutions to improve performance and reduce database load, achieving significant reductions in latency.
- Managed infrastructure as code with Terraform, ensuring consistent and repeatable environment setups.
- Worked closely with cross-functional teams in an agile environment, participating in sprint planning and retrospectives.
- Collaborated with architects to design scalable system architectures and conducted code reviews to maintain quality standards.
- Provided mentorship to junior developers, fostering a culture of continuous learning and improvement.

Technologies: Java, Spring Boot, Spring Cloud, Microservices, Angular, React, Hibernate, Apache Kafka, ELK Stack, Prometheus, Grafana, Sleuth, Zipkin, AWS, Docker, Kubernetes, Maven, Jenkins, Git, MySQL, PostgreSQL, MongoDB.

Optum, India
Java Developer

Dec 2019 – Oct 2022

Responsibilities:

- Worked closely with product owners to refine requirements, develop user stories, and ensure alignment with business objectives, fostering effective collaboration and team success.
- Participated in daily stand-ups and sprint planning meetings, contributing to agile development and continuous delivery.
- Designed and developed microservices using Spring Boot with a focus on modularity, scalability, and system integration.
- Migrated legacy systems to a microservices architecture, improving system reliability, integration, and maintainability.
- Integrated with third-party services using RESTful APIs, enhancing system interoperability and functionality.
- Demonstrated proficiency in SDLC processes, including UML modeling for clear system design.
- Developed and consumed RESTful web services for seamless data exchange between client and server applications.
- Deployed RESTful web services on Apache Tomcat, optimizing server configurations for efficient request handling and leveraging TDD for robust testing.
- Implemented SOAP web services using JAX-WS and secured APIs with OAuth 2.0 authentication.
- Created dynamic and interactive user interfaces using Angular and React, improving user experience and engagement.
- Proficient in client-side web programming using JavaScript, jQuery, AJAX, HTML5, CSS3, XML, Angular 12, and JSLT.
- Used Jasmine and Karma for unit testing Angular components, ensuring code quality through TDD and BDD practices.
- Managed database schemas and performed complex queries using Oracle and MySQL.
- Developed Spring Batch for batch processing of large data sets, optimizing processing times and resource usage through efficient use of data structures.
- Utilized Postman for API testing and validation, automating test cases for RESTful services to ensure consistent and reliable API performance.
- Conducted unit testing with JUnit, error monitoring with Log4J, and applied TDD/BDD practices across various services.

- Deployed services on IBM WebSphere and managed API gateways for routing and security.
- Deployed containerized applications using Docker and orchestrated microservices architecture, ensuring scalability and resilience.
- Leveraged Apache Kafka for real-time data streaming, setting up producers and consumers to handle high-throughput messaging for distributed systems, ensuring low-latency processing.
- Modernized legacy applications by migrating them to microservices architecture, leveraging Spring Boot and Docker.
- Replaced outdated logging mechanisms with ELK Stack, enabling real-time monitoring and troubleshooting.
- Utilized Prometheus and Grafana for application monitoring, improving system observability and troubleshooting.
- Conducted database migrations and performance tuning, optimizing query execution times and reducing latency.
- Monitored and optimized application performance using Sleuth and Zipkin for distributed tracing in a microservices architecture.
- Demonstrated proficiency in version control using GIT, ensuring collaborative and efficient project development.
- Managed the software lifecycle using agile methodologies, participating in code reviews and contributing to teamwork.

Technologies: Java, Spring Boot, Spring Batch, Microservices, Angular, React, Hibernate, IBM WebSphere, Oracle, MySQL, Docker, ELK Stack, OAuth 2.0, JAX-WS, Jasmine, Karma.
