

Harsh Ragadwala

Sr. Software Engineer

ragadwalaharsh@gmail.com | (737) 381-1131 | Austin, TX

Software Engineer with 5+ years of experience in DevOps, automation, cloud infrastructure, and software development at companies including Dell, Siemens and Verizon. Implemented CI/CD pipelines, managing containerized applications with Kubernetes and Docker. Proven expertise in cloud computing (AWS), scripting (Python, Bash, Groovy), and system monitoring (Prometheus, Grafana, Splunk) to enhance system performance, reduce downtime, and streamline deployments.

PROFESSIONAL EXPERIENCE

Software Engineer | Dell Technologies, USA

Jan 2023 – Present

- Revolutionized existing software deployment strategies by orchestrating CI/CD pipelines with Jenkins and Docker Registry, resulting in a 20% faster response time to critical bug fixes.
- Orchestrated Atlassian tool suite (JIRA, Confluence, GitHub) enhancements, slashing resolution times by 35% and enabling seamless collaboration across development and QA teams.
- Innovated automation scripts using Groovy, Shell, and Python to improve system efficiency and reduce manual tasks, eliminating 60% of repetitive work and improving infrastructure efficiency by 30%.
- Fortified virtualized environments on VMware, patching 50+ vulnerabilities and elevating system uptime to 99.99%, thereby ensuring continuous operation and zero critical downtime incidents.
- Configured and sustained containerized application infrastructure with Kubernetes and Docker, ensuring seamless transitions for over 200 daily builds and releases.
- Diagnosed and resolved system performance bottlenecks using Prometheus and Grafana, crafting custom queries and real-time alerts, which slashed system downtime by 20% and sped up incident response by 35%.
- Deployed and configured NGINX as a reverse proxy and load balancer to enhance web application performance and security.
- Modernised custom Jira integrations using Jira API, Java, HTML, CSS, and JavaScript, enhancing productivity and team collaboration.
- Optimized Kubernetes networking by configuring ClusterIP services, ensuring efficient internal communication between microservices, improving request handling speed by 25%.

Software Engineer | Siemens, USA

Sep 2020 – Jan 2023

- Engineered automated software deployment pipelines with Jenkins and Docker, enhancing deployment efficiency, cutting deployment time by 45%, and reducing rollback incidents by 30%.
- Led the hardware Verification and Validation (V&V) testing for a complex medical imaging system, ensuring compliance with FDA 21 CFR Part 820 and IEC 62304, and enhancing regulatory adherence and product reliability.
- Engineered automated testing solutions with Python, Bash, and R, enabling a 40% reduction in manual testing time and enhancing early defect detection, improving system stability.
- Implemented continuous integration and deployment (CI/CD) pipelines, integrating Jenkins with Docker Registry for better version control.
- Managed and configured virtualized environments on VMware Host, optimizing system performance.
- Ensured compliance with ISO 14971 and ISO 9000 quality management standards, maintaining high software reliability.
- Spearheaded real-time performance monitoring utilizing Prometheus, Splunk, and Dynatrace, guaranteeing 99.9% system uptime and accelerating mean time to resolution (MTTR) by 30%.

Software Engineer | Verizon, USA

Jul 2019 – Sep 2020

- Spearheaded Python and Shell scripts to automate infrastructure and deployment tasks, reducing manual interventions by 50% and cutting deployment time by 40%.
- Architected a highly scalable AWS infrastructure leveraging EC2, S3, IAM, CloudWatch, and Redshift, accommodating a 40% surge in data traffic while upholding stringent security protocols.
- Orchestrated infrastructure-as-code pipelines with Terraform and Ansible, cutting down server setup time by 60% and reducing manual configuration drift by an estimated 45% across the entire network.
- Deployed unified monitoring solution leveraging Prometheus and Grafana; enabled the team to identify and resolve previously undetected performance bottlenecks, cutting downtime by 15 hours per month.
- Managed database administration for MySQL and DynamoDB, optimizing query performance and backup strategies.
- Integrated JUnit testing into the CI/CD pipeline, which caught 100% of the integration errors automatically; this increased the number of successful builds per week by 35%.

EDUCATION

- MS in Information Technology, University of the Cumberland, USA
- BS in Chemical Engineering, Cleveland State University, USA

Jun 2023 – May 2024

Aug 2016 – May 2020

TECHNICAL SKILLS

- **Cloud Platforms:** AWS (EC2, S3, Lambda, RDS, VPC, IAM, CloudFormation), VMware, Redshift
- **IaC & Automation:** Terraform, CloudFormation, Python, Bash, Groovy, Ansible
- **DevOps & CI/CD:** Jenkins, GitHub Actions, GitLab CI/CD, Bamboo
- **Containers & Orchestration:** Docker, Kubernetes, Istio
- **Monitoring & Security:** AWS CloudWatch, Prometheus, Grafana, ELK Stack, IAM, DevSecOps, Dynatrace
- **Programming & Frameworks:** Java, Spring Boot, Spring Security, Hibernate/JPA
- **Databases:** SQL Server, MySQL, PostgreSQL, MongoDB
- **API & Web Services:** REST, Microservices, gRPC, Tomcat, WebLogic, NGINX
- **Agile & Collaboration:** Scrum, Kanban, JIRA, Confluence
