

HARSH GORDHAN DUNGRANI

Fremont, CA | hdungrani2@gmail.com | (872) 801-2165 | [linkedin.com/in/harshdungrani](https://www.linkedin.com/in/harshdungrani) | github.com/harshdungrani

- **4 years** of experience designing, implementing, and optimizing robust databases, automating processes, and building dynamic dashboards driving data-driven decisions.
- Experienced in using the phases of **SDLC** which involves planning, analysis, designing, developing, testing, deploying, and maintaining applications utilizing programming languages, database technologies and software methodologies like **Agile** and **Waterfall** to optimize project execution and achieve desired outcomes.
- Skilled in leveraging **Cloud Data Engineering tools** to deliver data warehouses, data analytics pipelines, and data visualization and reporting solutions.
- Built interactive dashboards and reports in **Power BI, Tableau, QuickSight and Looker Studio** transforming complex data into actionable insights for project tracking, performance management, learner analytics, financial reporting, sales reporting and inventory management.
- Designed, implemented, and maintained **RDBMS databases** using **SQL** for extracting, cleaning, and analyzing data.
- Demonstrated expertise in conceptualizing and implementing **data warehousing** solutions, using OLAP, OLTP, star schema, snowflake schema, and medallion architecture to enhance data analytics.
- Utilized advanced **MS Excel** functionalities and **Python** scripting to optimize data integrity and streamline processes.
- Results-driven, highly organized professional with excellent communication and interpersonal skills, adept at meeting targets both independently and as a collaborative team member.

SKILLS

- **Languages:** Python, R, SQL, MATLAB, C/C++, HTML, CSS, JavaScript, Bash, PowerShell.
- **Software:** Git, MS Excel, Microsoft 365, MS SQL Server, Oracle SQL, PostgreSQL, Jira, Looker Studio, Tableau, Power BI, AWS, Azure, SSIS, SSRS, Power Apps, Power Automate, Spark, Databricks, Airflow, Google Analytics.

ACHIEVEMENTS

- Collaborated with cross-functional teams to gather business requirements, collected and analyzed data, and delivered actionable feedback to optimize processes and support data-driven decision-making.
- Developed dynamic Tableau financial reports in collaboration with founders to support startup investor presentations, contributing to a successful fundraising round.
- Built and analyzed a large clientele database, extracting insights that led to increase in enrollments by 35% through targeted, data-driven marketing initiatives.
- Conducted data extracting, cleaning and engineering on import/export data, designed sales reports, and optimized daily inventory management to boost profits by 12% and streamline supply chain operations.

EXPERIENCE

Data Analyst

Apex Technology Systems, Inc.

July 2024 - Present

Client: Great American Financial Resources, Inc.

Project: Vigilant Eye

Description: The project involved of catastrophe modeling, data engineering, and visualization efforts to identify and evaluate catastrophe risk.

Responsibilities:

- Developed and implemented scalable and efficient data pipelines for ingesting, transforming, and loading data from various sources to target destinations.
- Leveraged medallion architecture in **Databricks** to create end-to-end pipeline used for machine learning modelling.
- Utilized **PySpark** to define standards and practices for ensuring efficient and maintainable data processing code.
- Built dashboards and reports using **Power BI** to map catastrophe events for visual insights and enable data-driven decisions for the business.
- Incorporated **Lambda functions** for serverless ingestion and cleaning of data.
- Developed and implemented data analysis within **Redshift** to extract trends and insights from data.
- Created and shared interactive dashboards and reports in **QuickSight** to visualize data to make actionable decisions.
- Streamlined repeatable processes using **Glue ETL workflows** for automation and data preparation tasks.
- Enable **CloudWatch Logs** and set up **Alarms** and monitored various AWS services.
- Collaborated with other teams to share cleaned data stored in data warehouses and insights through visualizations.

Environment: Databricks, Python, PySpark, Power BI, SQL, EMR, EC2, Lambda, Redshift, CloudWatch, QuickSight, EventBridge, S3, Glue, Athena

Business Analyst

Sapientury

Jan 2022 - Jun 2022

Project: PrecisionED Strategies

Description: The project involved working for an early-stage EdTech startup as an analyst for carrying out market research and assisting in formulating data-driven marketing strategies.

Responsibilities:

- Created **learner analytics dashboard** for over 5,000 learners spanning 17 courses using **MS Excel** and **Looker Studio** to deliver actionable insights and enhance understanding of learner performance.
- Performed web scraping to extract data from websites using **BeautifulSoup** in **Python**.

- Built and analyzed extensive clientele database using **Python** and **Airtable**.
- Used **Airtable** for creating databases containing university details and information for analysis.
- Collected and evaluated user feedback data using **Google Forms** and **Google Sheets** to improve user experience.
- Tracked and analyzed website traffic, user behavior, and conversion rates using **Google Analytics**.
- Developed dynamic **Tableau financial reports** in collaboration with the founders for investor pitches.
- Utilized **Slack** and **ClickUp** for assigning tasks, tracking milestones, and automating reminders to enhance team collaboration and communication.

Environment: MS Excel, Looker Studio, Python, Airtable, Google Sheets, Google Forms, Google Analytics, Tableau, Slack, ClickUp

Data Analyst

Varni Gems

May 2019 - Dec 2021

Project: CrystalCarat Insights

Description: CrystalCarat Insights project consisted of collecting import-export data of a diamond manufacturing and trading firm for monitoring inventory levels and extracting insights to assist decision-making through advanced data analytics.

Responsibilities:

- Involved in cross-team communication, gathering requirements and designing workflows to streamline processes.
- Conducted data importing, cleaning and engineering utilizing **PySpark**, **S3 buckets** and **Glue ETL**.
- Monitored and managed daily stock levels for efficient **inventory management**, minimizing discrepancies, and supporting seamless **supply chain operations** using **Redshift** and **Power BI**.
- Used **Athena** for ad-hoc analysis of sales data stored in **S3** buckets by creating data catalogs in **Glue** using crawlers.
- Boosted profits through the design and implementation of **sales data reports** in **Power BI**.
- Managed tickets and tracked progress using **Jira** for agile project management.

Environment: MS Excel, Python, PySpark, S3, SQL, Athena, Redshift, Glue Power BI, Jira

EDUCATION

Illinois Institute of Technology
Masters in Data Science

Chicago, IL
(GPA 3.91/4)

Sardar Patel Institute of Technology
Bachelor of Technology in Electronics and Telecommunication Engineering

Mumbai, India
(CGPA 9.33/10)

CERTIFICATIONS

- AI-900 "Microsoft Azure AI Fundamentals" Training by Ernst & Young
