

HARSH GORDHAN DUNGRANI

Fremont, CA | hdungrani2@gmail.com | (872) 801-2165 | [linkedin.com/in/harshdungrani](https://www.linkedin.com/in/harshdungrani) | github.com/harshdungrani

- **4+ years** of experience designing, implementing, and optimizing robust data warehouses, automating and streamlining processes, engineering reliable and scalable complex data pipelines, machine learning modelling and building dynamic dashboards and reports for driving data-driven decision-making.
- Experienced in using the phases of **SDLC** which involves planning, analysis, designing, developing, testing, deploying, and maintaining applications utilizing programming languages, database technologies and software methodologies like **Agile** and **Waterfall** to optimize project execution and achieve desired outcomes.
- Skilled in leveraging **AWS** and **Azure cloud services** to deliver data warehouses, data analytics pipelines, and data visualization and reporting solutions.
- Built interactive dashboards and comprehensive reports in **Power BI, Tableau, QuickSight and Looker Studio** by importing, transforming and analyzing complex data and creating visuals to understand the trends and insights that help make better data-driven decisions while ensuring data integrity and security.
- Designed, implemented, and maintained **RDBMS databases** using **SQL** for extracting, cleaning, and analyzing data using joins on multiple tables, stored procedures, CTEs, window functions, triggers, etc.
- Demonstrated expertise in conceptualizing and implementing **data warehousing** solutions, using OLAP, OLTP, star schema, snowflake schema, and medallion architecture to enhance data analytics.
- Developed chat bot using **Generative AI** and **large language models** for generating high quality responses to user queries and improve user experience.
- Experienced in developing **Machine Learning** models for customer churn prediction, sentiment analysis using Natural Language Processing techniques on textual data, and forecasting models on time series data.
- Streamlined processes using scripts in **Python** and **PySpark** for automating complex and scalable ETL/ELT pipelines and reducing reporting time.
- Architected and implemented end-to-end data pipelines using **PySpark** and **SQL** within **Databricks**, leveraging distributed processing power of **Spark** to ingest, transform, and manage large volumes of data for robust data warehouses and machine learning initiatives.
- Leveraged **Snowflake** to develop cloud data warehouses utilizing advanced **SQL** to extract data from cloud storages and execute complex transformations, while implementing role-based access control (RBAC) to ensure data security.
- Utilized advanced **MS Excel** functionalities like formulas, lookups, pivot tables, conditional formatting, data validation, macros and what-if analysis to prepare and analyze data.
- Results-driven, highly organized professional with excellent communication and interpersonal skills, adept at meeting targets both independently and as a collaborative team member.

SKILLS

- **Languages:** Python, PySpark, R, SQL, MATLAB, Scala, HTML, Bash, PowerShell
- **Tools:** MS Excel, AWS, Azure, Databricks, Snowflake, Power BI, Tableau, QuickSight, Looker Studio, MS SQL Server, Oracle SQL, Airtable, SSIS, SSRS, Power Apps, Power Automate, Fabric, Airflow, ChromaDB, OpenAI, Google Analytics, Jira, Outlook, Microsoft 365, Miro, ClickUp, Slack, Git, Github, VSCode.

ACHIEVEMENTS

- Reduced reporting time by 35% leveraging various AWS services and creating reliable and scalable data pipelines while ensuring data integrity and security.
- Leveraged Machine Learning models for performing customer churn, sales forecasting, and sentiment analysis with excellent performance metrics and Generative AI models for creating chat bots to improve user experience.
- Developed dynamic Tableau financial reports in collaboration with founders to support startup investor presentations, contributing to a successful fundraising round.
- Built and analyzed a large clientele database, extracting insights that led to increase in enrollments by 35% through targeted, data-driven marketing initiatives.
- Conducted data extracting, cleaning and engineering on import/export data, designed sales reports, forecasted sales using machine learning models on time series data and optimized daily inventory management to boost profits by 12% and streamline supply chain operations.
- Collaborated with cross-functional teams to gather business requirements, collected and analyzed data, and delivered actionable feedback to optimize processes and support data-driven decision-making.

EXPERIENCE

AI & Data Engineer

Apex Technology Systems, Inc.

July 2024 - Present

Client: Great American Financial Resources, Inc.

Responsibilities:

- Developed and implemented scalable and efficient ETL/ELT data pipelines for ingesting, transforming, and loading data from various sources to target destinations.
- Leveraged medallion architecture in **Databricks** to create end-to-end pipeline for creating dataset used for **machine learning** modelling to predict customer churn by building and analyzing performances of different models.
- Defined standards and practices using **PySpark** and **SparkSQL** for efficient and scalable data processing in **Databricks** for large volumes of data while ensuring data security and governance using **Unity Catalog**.
- Designed and developed dashboards and reports within **MS Power BI** for visual insights on complex dataset and enable data-driven decisions for the business.

- Incorporated **Lambda functions** for serverless ingestion and cleaning of data using **Python** scripts.
- Developed and implemented data warehouses within **Snowflake** to extract trends and insights from data using advanced **SQL** while ensuring data security and governance.
- Created and shared interactive dashboards and reports in **QuickSight** to visualize data to make actionable decisions.
- Utilized **ChromaDB** as vector database and **OpenAI** for embedding model and large language model for developing chat bot generating high-quality generative responses on insurance policies using **LangChain** for agent orchestration.
- Streamlined repeatable processes using **Glue ETL workflows** for automation and data preparation tasks.
- Enable **CloudWatch Logs** and set up **Alarms** and monitored various AWS services.
- Orchestrated multiple complex data pipelines using **Airflow** to automate tasks and ensure reliability.
- Collaborated with other teams to share cleaned data stored in data warehouses and insights through visualizations.

Environment: Databricks, Python, PySpark, Power BI, SQL, EMR, EC2, Lambda, Snowflake, CloudWatch, QuickSight, EventBridge, S3, Glue, Athena, Fabric, Airflow, ChromaDB, OpenAI, LangChain, Generative AI

Business Intelligence Analyst

Sapientury

Jan 2022 - Jun 2022

Responsibilities:

- Created **learner analytics dashboard** for over 5,000 learners spanning 17 courses using **MS Excel** and **Looker Studio** to deliver actionable insights and enhance understanding of learner performance.
- Performed web scraping to extract data from websites using **BeautifulSoup** in **Python**.
- Built and analyzed extensive clientele database using **Python** and **Airtable**.
- Used **Airtable** for creating databases containing university details and information for formulating marketing strategies.
- Collected and evaluated user feedback data using **Google Forms** and **Google Sheets** to improve user experience.
- Conducted detailed **sentiment analysis** using **Python** for **natural language processing** on course reviews to understand strengths and weaknesses in content and help in making improvements that elevate user satisfaction.
- Tracked and analyzed website traffic, user behavior, and conversion rates using **Google Analytics**.
- Developed dynamic **Tableau financial reports** in collaboration with the founders for investor pitches.
- Leveraged **Miro** board as a dynamic digital workspace to brainstorm, plan, and visually map out project strategies and workflows across multiple teams.
- Utilized **Slack** for effective communication and seamless collaboration with different individuals and teams.
- Managed project lifecycles using **ClickUp** by creating detailed tasks, assigning priority levels, and tracking deadlines to ensure timely and successful project completion.

Environment: MS Excel, Looker Studio, Python, Airtable, Google Sheets, Google Forms, Google Analytics, Tableau, Miro, Slack, ClickUp

Data Analyst

Varni Gems

May 2019 - Dec 2021

Responsibilities:

- Involved in cross-team communication, requirements gathering and designing workflows for project management.
- Conducted data importing, cleaning and engineering utilizing **MS Excel**, **Python**, **PySpark**, **S3 buckets** and **Glue**.
- Analyzed data using advanced **MS Excel** functionalities like formulas, lookups, pivot tables and charts, and what-if analysis to help stakeholders make better data-driven decisions.
- Monitored and managed daily stock levels for efficient **inventory management**, minimizing discrepancies, and supporting seamless **supply chain operations**.
- Designed, maintained and analyzed robust databases in **Amazon RDS** using advanced **SQL** queries and scripts.
- Used **Athena** for ad-hoc analysis of sales data stored in **S3 buckets** by creating data catalogs in **Glue** using crawlers.
- Leveraged **Redshift** for creating data warehouses and applied data transformations using **SQL** to analyze data and extract actionable insights.
- Boosted profits by designing comprehensive **sales data reports** in **Power BI** using **Power Query** to perform transformations and **DAX** for creating complex measures to visualize trends and extract valuable insights.
- Utilized **Python** for sales forecasting by visualizing time series data, performing exploratory data analysis, building and comparing performances of different machine learning regression models for making better sales decisions.
- Managed tickets and tracked progress of various projects using **Jira** for **agile project management**.

Environment: MS Excel, Python, SQL, PySpark, S3, Redshift, Athena, Amazon RDS, Glue, Power BI, Jira

EDUCATION

Illinois Institute of Technology

Masters in Data Science

Chicago, IL

(GPA 3.91/4)

Sardar Patel Institute of Technology

Bachelor of Technology in Electronics and Telecommunication Engineering

Mumbai, India

(CGPA 9.33/10)

CERTIFICATIONS

- AI-900 "Microsoft Azure AI Fundamentals" Training by Ernst & Young
