SUMMARY

Results-driven AI Engineer with 2+ years of experience building and deploying scalable machine learning solutions across high-volume financial platforms. Proven expertise in fraud detection, credit risk modeling, NLP automation, and LLM fine-tuning for digital banking use cases. Skilled in end-to-end ML pipelines, MLOps, cloud platforms, and responsible AI practices to meet strict regulatory and security standards. Adept at cross-functional collaboration, translating complex data insights into strategic business impact. Passionate about driving innovation, operational efficiency, and trust in financial systems through intelligent, production-ready AI solutions.

TECHNICAL SKILLS

Languages: Python, R, SQL, JavaScript, Bash, C/C++

ML & AI: Supervised/Unsupervised Learning, Deep Learning (CNN, RNN, Transformers), Reinforcement Learning, Generative AI (LLMs, Diffusion Models), Model Explainability (SHAP, LIME)

Frameworks & Libraries: TensorFlow, PyTorch, Keras, Hugging Face Transformers, OpenCV, spaCy, NLTK, XGBoost, LightGBM

Data & MLOps: ETL, Real-Time Streaming (Apache Spark, Kafka), MLflow, Kubeflow, CI/CD, Model Deployment & Monitoring

Cloud & Deployment: AWS SageMaker, Azure Machine Learning, Google Vertex AI, Docker, Kubernetes, Flask, FastAPI, Streamlit

Databases: PostgreSQL, MySQL, MongoDB, Redis, Snowflake, Google BigQuery, Pinecone, FAISS

Specializations: NLP, Computer Vision, Recommendation Systems, Time-Series Forecasting, LLM Fine-Tuning, Prompt Engineering

Tools: Git/GitHub, JIRA, Confluence, Airflow, Weights & Biases, Tableau, Power BI, VS Code, JupyterLab

Soft Skills: Problem Solving, Analytical Thinking, Cross-Functional Collaboration, Agile Mindset, Communication & Presentation, Stakeholder Management, Adaptability, Continuous Learning, Time Management, Innovation Mindset

PROFESSIONAL EXPERIENCE

AI Engineer Intern, JPMorgan Chase

May 2025 – Present | Remote, USA

- Contributed to the development of scalable ML pipelines on AWS SageMaker and Google Vertex AI for credit risk analytics, improving deployment efficiency and supporting enterprise AI initiatives.
- Assisted in fine-tuning large language models for financial advisory chatbots, enhancing contextual understanding, improving customer engagement, and supporting intelligent digital banking solutions.
- Supported MLOps automation using Docker, Kubernetes, and MLflow for model versioning, testing, and rollback, ensuring compliance with strict financial regulatory requirements.
- Collaborated on deploying real-time fraud detection systems with drift monitoring, achieving high model uptime and strengthening fraud prevention strategies within financial transaction networks.

AI Engineer, PhonePe

Aug2022 – Jul 2024 | Remote, India

- Designed and deployed advanced ML models for payment fraud detection, leveraging transaction behavior and anomaly signals, reducing fraudulent transaction rates by 28% and increasing platform trust.
- Built real-time, high-throughput data pipelines using Apache Spark and Kafka to process millions of transactions daily, enabling faster risk scoring and real-time fraud response accuracy.
- Implemented automated model monitoring and drift detection mechanisms, ensuring continuous model performance optimization and early detection of data pattern shifts in live transaction environments.
- Developed and fine-tuned cutting-edge NLP models with Hugging Face Transformers to automate dispute classification, reducing manual handling time by 36% and boosting customer satisfaction rates.
- Engineered and optimized scalable ETL workflows with Python for predictive analytics, enhancing credit risk model accuracy, efficiency, and reliability across multiple financial service lines.
- Collaborated closely with credit and risk strategy teams to integrate AI insights into lending workflows, improving risk evaluation speed, decision precision, and default prediction rates.
- Led rigorous A/B testing and SHAP explainability validation initiatives, ensuring AI model transparency, compliance with financial regulations, and stronger audit readiness for fraud management.
- Partnered with backend engineering and product teams to integrate AI components into core financial platforms, improving scalability, deployment reliability, and system-wide fraud prevention capabilities.

CERTIFICATIONS

- Google:** [Data Analytics Certificate](#)
- Software:** [Software Engineering and Agile Development](#)

EDUCATION

Masters of Science, University of Illinois
Computer Science

Aug 2024 – Dec 2025 | IL, USA

Bachelors of Science, Savitribai Phule Pune university
Computer Engineering

Jan 2021 – Jun 2024 | MH, India
