EDUCATION

Master of Science, Information Technology

University of Cincinnati

Cincinnati, Ohio

August 2023 – Present

Coursework: Web Application Programming & Hacking, Microsoft Data Engineer, Statistical Data Analysis, Cybersecurity.

Bachelor of Technology, Information Technology,

Vignan's Foundation for Science, Technology, and Research

Andhra Pradesh, India

July 2019 – April 2023

Coursework: C, Data structures, Java, Python, Mobile Application Development, Web Technology, Data Mining Techniques

TECHNICAL SKILLS

Programming: C++, C, C#, Python

Web Development: HTML, CSS, JavaScript

Software/Operating Systems/Tools: Microsoft Azure, MySQL, Visual Studio, Linux, Windows, GitHub, Shell Script, Tableau

Machine Learning & Data Tools: TensorFlow, Keras, CNN, RNN, NumPy, Pandas

Frameworks & Libraries: ASP.NET Core, EF Core

EXPERIENCE

CybroSphere Solutions

Jr. Python Developer Intern

Hyderabad, India

Jan 2023 – June 2023

- Streamlined ETL processing efficiency by 30% through designing and implementing Unix shell scripts.
- Spearheaded ETL operations across 3 servers, enhancing data retrieval processes.
- Multiplied ETL execution frequency by 24 times using automated Python and batch scripts.
- Engineered 9 Python ETL scripts, boosting data transfer accuracy between database tables.
- Devised 7 Python scripts for XML parsing, facilitating streamlined database insertion.
- Optimized content storage efficiency using Python and Django with jQuery UI in 2 projects.
- Enhanced 6 Tableau visualizations to deliver strategic insights for management.
- Guaranteed over 95% customer satisfaction by ensuring the application met the desired requirements consistently.

PROJECTS

Online Bookstore

- Engineered an online bookstore, forecasting \$500K in sales, with user authentication and order management features.
- Implemented and optimized CRUD operations for book management, secure user login and registration, and session management for persistent shopping cart functionality.

Facebook Interface Development Using GitHub and Ubuntu Linux

- Designed, developed, and deployed frontend components for Facebook integration using HTML5, CSS3 (including preprocessors like Sass), and JavaScript frameworks like React.js.
- Managed and maintained a codebase of 2000 lines using Git and GitHub for project iterations. Formulated and implemented branching strategies across 4 team members to preserve code integrity during 30 project releases.

Gym Services Management System

- Crafted and launched a responsive web application interface using HTML5, CSS3, and JavaScript, ensuring accessibility for trainers and bodybuilders.
- Administered a MySQL database with 200 tables, to securely store 10,000 user records and complaints. Implemented 15 UI changes aligning with project specs, boosting user experience and satisfaction ratings by 20%.

Plant Leaf Disease Detection Using Deep Learning

- Improved a deep learning-based plant leaf disease detection system using TensorFlow and Keras, achieving over 90% accuracy in disease classification on a dataset of over 10,000 images.
- Optimized and fine-tuned convolutional neural networks (CNNs) such as ResNet and VGG16 on GPU instances in Google Colab to boost model performance and shorten training time.

CERTIFICATIONS

- Social Networks | NPTEL by IIT Madras in Apr-2022
- Introduction to Machine Learning | NPTEL by IIT Madras in Oct-2022
- Oracle Cloud Infrastructure 2024 Generative **Artificial Intelligence** Certified Professional in Jun-2024
