SUMMARY

Data Engineer with 4+ years of experience designing, building, and scaling end-to-end data pipelines and analytics platforms across cloud environments. Strong expertise in Python, SQL, Snowflake, dbt, and Airflow, with a proven track record of delivering reliable ELT workflows and analytics-ready datasets that support executive reporting and business decision-making. Experienced in data modeling, pipeline orchestration, and data quality frameworks, ensuring performance, scalability, and governance across production systems. Known for collaborating closely with analytics, product, and business teams to translate complex requirements into robust data solutions, while supporting experimentation, GenAI-enabled analytics, and enterprise-scale insights. Beyond core pipeline development, I bring a strong focus on data reliability, governance, and long-term maintainability of production systems. I have hands-on experience implementing data validation checks, monitoring frameworks, and reusable transformation layers that improve trust in data and reduce downstream issues. I work closely with analytics, product, and engineering teams to align data models with real business use cases, support experimentation and GenAI-enabled analytics, and ensure data platforms scale effectively as requirements evolve.

EXPERIENCE

Hottest Footwear.com Inc, Data Engineer

Dec 2024 - Present

- Created executive KPI dashboards in Tableau and Power BI using Python and SQL (Snowflake, BigQuery), helping cut reporting delays by about 40% and speed up leadership decisions.
- Automated core data workflows with Apache Airflow and dbt on AWS (S3, Redshift), reducing refresh times by 75% and making near real-time reporting possible.
- Designed and maintained data models and pipelines used for cohort analysis and A/B testing, which later showed about a 12% lift in downstream model performance.
- Partnered day to day with product, marketing, and engineering teams to clarify requirements and deliver analytics solutions.
- Wrote BRD and FRD documentation in JIRA and Confluence for AI Workbench projects, aligning stakeholders and supporting production releases for over five enterprise clients.
- Set up data validation checks, monitoring, and root-cause analysis processes to ensure accurate, consistent, and compliant data.
- Built and maintained backend data pipelines for a GenAI assistant product, which saw higher user adoption over time and meaningful cost savings for the business.
- Handled both ad-hoc and longer-term analytics requests by writing reusable SQL, Python scripts, and dashboard templates, making reporting faster and more self-service.

Cloudninetek LLC, Data Analyst

Feb 2024 - Dec 2024

- Analyzed revenue data for digital wallet and blockchain products using Excel and SQL in Snowflake, helping improve alignment between forecasted and actual results.
- Streamlined reconciliation and reporting workflows with Alteryx and Redshift, reducing manual effort and increasing confidence in cross-border payment data.
- Built time-series forecasts in Python and shared results in Tableau to support budgeting and planning during the Madis on Dearborn acquisition period.
- Regularly reviewed variances and trends, and delved into the data when discrepancies arose, providing leadership with a clearer understanding of the numbers.
- Ran working sessions with finance, risk, and audit teams to agree on compliance and regulatory metrics and get reporting aligned.
- Built executive dashboards and pulled together presentations in Looker that were used to track digital adoption and cost-related metrics.
- Collaborated with product and engineering teams whenever questions came up, using data to help with planning and investment decisions.

DataCloudTek LLC, Data Analyst

Jul 2023 - Sep 2023

- Maintained and optimized QlikView dashboards and SQL queries to monitor cloud and virtualization resources, improving reporting efficiency and reducing costs.
- Cleaned and analyzed large cloud datasets in Python to enhance the accuracy and reliability of performance and capacity reports.
- Created interactive and static visualizations in Power BI and Matplotlib, making dashboards faster and easier to use.

- Used statistical analysis and EDA in NumPy to spot cost anomalies and usage inefficiencies, reducing errors in reports.
- Performed data checks and root-cause analysis to ensure datasets were consistent and reliable.
- Worked with infrastructure, finance, and operations teams to turn business needs into actionable analytics for cost optimization.
- Documented dashboards and insights in JIRA and Confluence, improving transparency and stakeholder collaboration.

*Accenture, India, **Software Application Developer***

Apr 2021 - Aug 2022

- Designed and developed custom business applications using Microsoft Power Apps (Canvas and Model-Driven) to meet client requirements and improve operational efficiency.
- Configured and customized Microsoft Dynamics 365 entities, forms, views, workflows, and business rules to support CRM and business process automation.
- Automated end-to-end business workflows using Power Automate (Flows) for approvals, notifications, and system-to-system data integration, reducing manual effort.
- Developed and maintained .NET-based backend components and integrations to connect Dynamics 365 with other enterprise applications and data sources.
- Collaborated with clients, product owners, and cross-functional teams to gather requirements, perform process analysis, and deliver scalable technical solutions.
- Supported application testing, deployment, and post-production support, ensuring stability, performance, and user adoption of Power Platform solutions.
- Documented dashboards and key insights in JIRA and Confluence, improving transparency and enabling better collaboration across teams.

EDUCATION

University of New Haven

*Master of Science • **Business Analytics***

DVR & Dr. HS MIC College of Technology

*Bachelor • **Electronics & Communication Engineering***

SKILLS

Python (Pandas, NumPy, Seaborn, Matplotlib) • SQL (Snowflake, BigQuery, Redshift, PostgreSQL) • Excel (Advanced formulas, Pivot Tables, Power Query, VBA basics) • Tableau • Power BI (DAX, Power Query) • Looker • QlikView • Amazon QuickSight • AWS (S3, Redshift, Athena, Lambda) • Azure (Synapse, Data Factory, Databricks)
