

TECHNICAL SKILLS

- **Operating Systems:** Windows, MacOS , linux(Basic)
- **Technologies:** Office 365, Microsoft Intune (basic), Azure, AWS , Google Cloud
- **Programming/Technologies:** C, C++, Java, SQL, PostGre SQL, Python, Django, Flask, Kotlin, HTML, CSS, JavaScript, Azure, AWS, React, React Native, Go lang , Machine Learning , Deep Learning , Natural Language Processing , Computer Vision , Generative AI , Bigquery , GCP , Pyspark, Stibo MDM, Informatica , Express.js , DataProc
- **Tools:** Android Studio, Anaconda, Visual Studio Code, AWS console, GCP Console , MATLAB, WordPress, GIT , PowerBI , Tableau
- **Database:** MySQL, Google Firebase , MongoDB

WORK EXPERIENCE

AI/ML Developer at Resilience Inc

Mar 24 – Present

- Engineered data pipelines to process large volumes of data for the AIMEE mobile app, ensuring efficient data flow and system optimization using Python and ReactNative.
- Developed and optimized neural networks with Python, Keras, MLlib, and Scikit-Learn, focusing on data preprocessing, feature extraction, and transformation to improve model accuracy (currently at 85%) and processing efficiency.
- Utilized Python for extensive data processing, cleaning, and transformation tasks, including real-time data ingestion and integration with cloud-based services.
- Collaborated on the design of scalable data architecture to support AI curriculum development, including emotion detection models, by building robust data pipelines that handled voice data inputs for real-time processing and task assignment within the app.

IT and Web Development Coordinator at CIP Chicago

Dec 23 – May 24

- Managed backend data systems and integrated real-time data flows for website updates and IT support tasks, employing diagnostic tools to ensure seamless data operations and minimize downtime.
- Collaborated on mobile app development, building initial data architecture using Node.js, React Native, and Express.js, ensuring optimized data handling and integration with cloud databases for mobile operations.
- Developed data-driven marketing analytics by leveraging user engagement data through tools like Adobe Creative Suite, enhancing data insights and user-focused communication.
- Streamlined mobile data operations by designing and implementing data pipelines that improved accessibility and overall app efficiency, ensuring close collaboration with stakeholders to meet specific data needs.

Intern/Programmer Analyst Trainee at Cognizant

Jan 22 – Dec 22

- Engineered and maintained large-scale data systems using STIBO MDM to manage pharma and medical data for the GSK group, ensuring 90% data accuracy and improving data processing efficiency by 30% across data pipelines.
- Led data integration and ETL processes for GSK and Haleon, applying troubleshooting and problem-solving techniques to optimize data flows, resulting in a 20% reduction in data processing time and enhanced system performance.
- Handled real-time data processing and project execution, contributing to enhanced adaptability and proficiency in managing complex data systems, increasing project delivery speed by 25%.
- Conducted rigorous data validation, testing, and integration, ensuring 99% operational uptime and maintaining high data integrity, minimizing errors and improving data reliability by 40%.
- Utilized Python for advanced data manipulation, transformation, and analysis, driving the development of data-driven insights that improved decision-making efficiency by 15%.

App Developer Intern at Tech Table

Jan 21 – Apr 21

- Utilized React Native, Node.js and Google Firebase for the PinBlu Project, primarily focusing on UI development.
- Collaborated with mentors and interns to enhance data handling and storage in the project, resulting in a 20% improvement in app performance and ensuring a seamless, intuitive user experience.
- Gained hands-on experience in real-time data synchronization and storage solutions with Google Firebase, which improved data retrieval speed by 15%, contributing to the project's overall success and personal professional growth.

PROJECTS

Flagrant Foul Futbol Association

- Developed a football league management website utilizing Python for backend services, React, Express.js, and Google Cloud Database, enabling efficient management of teams, schedules, and statistics.
- Implemented user-friendly features within the platform to enhance team and schedule management effectiveness.
- Enhanced frontend UI using Bootstrap and Figma to ensure a visually appealing and intuitive user experience.
- Utilized the React Boilerplate to streamline TypeScript and JavaScript utilization, optimizing development efficiency and code organization.

Ticket Booking App

- Developed a mobile application using Python, React Native, Android Studio, and Google Firebase, facilitating seamless ticket booking functionality.
- Integrated real-time updates and secure payment gateways, enhancing user experience and trust in the application.
- Utilized Node.js and Expo for comprehensive testing across various mobile devices, ensuring compatibility and optimal performance.
- Replicated UI/UX from established ticket platforms, improving user familiarity and adoption rates, resulting in increased user engagement and satisfaction.

ACADEMICS

Saint Louis University , Saint Louis, MO	Jan 2023 - May 2024
MS in Artificial Intelligence	
KL University , Hyderabad , India	Jul 2018 - Apr 2022
B.Tech in Computer Science	

CERTIFICATIONS

Professional Data Engineer	AI Foundations	Cloud Architect (AWS & Azure)
Google	NASSCOM & Skill Up	Simplilearn
Oracle Cloud Infrastructure 2024 Generative AI Professional		Data Engineering, Big Data, and Machine Learning on GCP Specialization
Oracle		Google Cloud
