Professional Summary

With around five years of experience as a Software Engineer and a Master's degree in Computer Science, I have gained knowledge to design, build, and test diverse software applications. My experience includes creating dynamic and interactive dashboards using Power BI and Tableau, which helped visualize complex datasets and deliver actionable insights, enhancing decision-making processes across various projects. My technical expertise also spans across both back-end and front-end development. I am skilled in MySQL database management and experienced in CI/CD tools for smooth deployments. I have collaborated closely with cross-functional teams within an Agile/Scrum work environment for working efficiently. Additionally, I have hands-on experience with cloud-based technologies including AWS, Azure, and Snowflake.

Education

Northern Illinois University

Master of Science, Computer Science, GPA 3.6

Dekalb, IL

Jan 2022– Dec 2023

Koneru Lakshmaiah Education Foundation

Electronics and Communication Engineering, GPA 8.9

Vijayawada, India

May 2016– May 2020

Technical Skills

Software Skills	: Java, .net, C,C++, Visual Basic, Python, ML Algorithms
Web Development	: HTML/CSS, Java Script, Angular, React
Databases	: SQL, MySQL, SSMS, Oracle, Mongo DB, SSRS
Software Methodologies	: Agile, Waterfall system analysis and design
Data Visualization tools	: Power BI, Tableau, SPSS
Other Tools	: New Relic, HFSS, Visual studio

Experience

Ameriprise Financial

Minnesota

Software Developer

Jan 2024 – Present

- Worked on developing a single page web application for Ameriprise Financial, that is used to support financial advisors with meaningful data insights that helps them to make more data-driven decisions.
- Created dynamic and interactive dashboards in Power BI, integrating SQL queries for real-time data insights and delivering actionable insights through advanced visualizations and DAX formulas.
- Developed complex Power BI dashboards utilizing advanced DAX formulas and custom visuals, automating data workflows and providing deep insights through predictive analytics and real-time reporting to support strategic business decisions.
- Developed SQL scripts for real-time monitoring and reporting, integrating with Power BI dashboards for getting useful insights. Utilized SQL, MySQL, and Snowflake for efficient data storage and retrieval, facilitating seamless data interchange and integration within the system
- Implemented performance optimization techniques for Power BI dashboards and SQL queries, ensuring efficient data processing and rapid insights delivery. Created views, sequences, and modified existing PL/SQL stored procedures in the Oracle, MySQL, Postgres, Snowflake, MongoDB (NoSQL) databases.
- Participated in the development and implementation of ETL processes using SQL Server Integration Services (SSIS). Designed and maintained complex reports using SQL Server Reporting Services (SSRS).
- Leveraged Python libraries such as Pandas and NumPy for advanced data manipulation, enabling efficient analysis in Power BI and Excel.
- Utilized Power Query to automate data cleaning, transformation, and consolidation processes, enhancing data preparation workflows and enabling efficient analysis in Power BI and Excel.
- Skilled in Microsoft Word and Excel for Detailed Documentation and Analysis. Created in-depth reports, process maps, and requirements documentation, leveraging advanced Excel functions for data visualization and Word for organized, clear formatting to support communication and to take informed decisions.

**Nationwide, Cognizant
Program Analyst**

India
July 2020 – Dec 2021

- I have worked in the Insurance domain where we developed comprehensive software solutions to streamline operations, enhance customer experiences, and improve data management.
- Created dynamic and interactive dashboards using Power BI to visualize complex datasets and have delivered actionable insights. Created dashboards in Power BI, integrating SQL queries for real-time data insights.
- Developed comprehensive financial dashboards in Power BI to consolidate key metrics like premium collections, payouts, and reserves, enabling stakeholders to monitor financial performance and make informed decisions.
- Designed and enhanced interactive Power BI reports to highlight anomalies in claims data, integrating advanced DAX formulas and custom visualizations to detect potentially fraudulent activities.
- Developed RESTful APIs with Java Spring Boot for versatile data delivery. Built single-page applications and reusable components in React, ensuring modularity and scalability for maintainable code.
- Proficient in managing and analyzing large datasets in cloud environments, utilizing advanced features of Snowflake, Azure, and AWS for real-time data insights and effective decision-making.
- Created various tables, stored procedures, jobs, triggers, and functions in Database. Fixed different types of Production bugs within defined SLAs and will work effectively based on priorities.
- Have strong knowledge in relational database management systems (RDBMS), including designing, implementing, and optimizing databases for enhanced performance and scalability.
- Responsible for implementing SQL queries and managing JDBC interactions with data sources. Developed customized SSRS reports with advanced features providing in-depth insights and improved data accessibility.
- Utilized Jira as the primary project management tool for daily ticket handling and task tracking. Coordinated with onsite teams and provided daily client updates following Agile methodology principles.
- Utilized Git and GitHub for branching, merging, and resolving conflicts to maintain a seamless development.

**Sears Holdings Corporation
Program Analyst**

India
Jun 2018 – May 2020

- Worked on an application which automates test order creation, enabling stakeholders to request a specific number of samples, which were then generated and provided automatically. Integrated results into Power BI dashboards for real-time insights.
- Led end-to-end development of an analytics-driven solution for automated test order processing, including high-level design, monitoring, and reporting using Power BI and SQL. Created dynamic dashboards to visualize sample requests, generation status, and processing efficiency. Implemented DAX formulas and custom visuals to provide stakeholders with real-time insights, optimizing decision-making and resource allocation.
- Wrote advanced SQL queries to extract, transform, and load (ETL) large datasets for reporting and data analysis purposes across multiple business units. Created stored procedures, triggers, and views using SQL to automate data manipulation tasks, resulting in a 15% improvement in processing efficiency. Integrated the data into Power BI for visualizing business trends and performance metrics.
- Using Java and the Spring Boot framework, robust backend services were built, ensuring seamless data integration between SQL databases and Power BI for analytics.

Academic Project & Activities

Graduate Project: “A Math genie” app using Android studio.

Description: This project aims to provide students with an interactive platform to practice fundamental mathematical operations. Users can initiate quizzes and track their scores as they progress through the questions. Additionally, they have the option to review their past quiz performances, including the scores attained in each quiz.

Graduate Project: “The Software Architectural Styles” using Python, SPSS.

Description: In this project a dataset of different software architectural styles is considered for analysis. Based on the different architectural styles the developer is using in his project, his previous degree has been predicted. Various machine learning algorithms like Logistic Regression, Decision Tree classifier and KNN classifier are applied on the dataset and the results were compared.

Certifications

- Completed Industrial Training at BSNL, Tirupati.
- Certified as an RPA professional in Automation Anywhere Tool.
