Environment: JIRA, Share Point, MS Visio, MS Excel

Microsoft for Enterprise Services, Greater Seattle
Business –IT Systems Consultant

December 2015 - Sept 2016

Responsibilities:

In this role, I primarily focused on being a User-focused expert on database management which is responsible for driving Enterprise Services from Requirement gathering to business implementation across 20+ systems in the Enterprise Services & Business Intelligence Unit of Microsoft with central alignment and user specification coordination. This involves in depth knowledge of Microsoft systems with their working environment and a broad perspective of all the tools, back end overview and UI specifications.

As a Senior Consultant, I had to bridge the Gap between various systems, stakeholders, business process and IT, headquartered in the Bellevue campus.

- User-focused expert focused on database management and Reference Data Management from complex database perspective.
 - Developed custom/advanced SQL queries to extract, organize and analyze information in order to investigate issues, answer questions, create lists, forecast audience sizes, formulate solutions/recommendations, etc.
 - Adept in Driving changes across various business units to streamline changes across various business units of Microsoft.
 - Proficient in software model development, assessment, and implementation of taxonomy tool called Master Data Dictionary
 - Proficient in maintaining and developing various LDM's, RDM's Model to support One Profile- Tool used by Microsoft for Resource Management.
 - Designed and performed UAT to assure quality in data processing
 - Developed and Maintained a project Schedule to overview all the timelines and their dominos effect on other Eco system of MS.
 - Designed and created processes to derive new information from raw data in order to satisfy new business needs.
 - Served as technical subject matter expert: understand underlying data, database, data processes and derivations in order to provide appropriate consultation to stakeholders.
 - Served as a liaison to business stakeholders in order to properly formulate business requirements, prepare campaign design documents, and facilitate production in the database.
 - Monitored daily inputs into the marketing database to ensure there are not unknown gaps and to assure quality/database integrity. Facilitated resolution of any disturbances to normal inflows.
 - Worked on intra-departmental and cross-functional teams to support continuous improvement of overall campaign management process, including design of data environment, data integrity assurance, and process automation.
-

- Collaborated with business, functional, technical, and application stakeholders to gain expertise on systems and data to ensure cross-functional system integration.
- Prepared and track CRs for data / database processes. Performed UAT on solutions developed by third party database vendor.
- Performed basic project management and oversee multiple work projects from inception through resolution

Environment: SQL Management Studio, Share Point, MS Visio, MS Excel, MDD
